Capstone Green Energy Continues to Support Midstream Expansion with 2MW Microturbine Order from Repeat Customer

LOS ANGELES--(BUSINESS WIRE)-- [Capstone Green Energy Holdings, Inc.](#) (the "Company" or "Capstone") (PINK: CGEH) and Capstone Green Energy, LLC., announced that [Horizon Power Systems](#) secured a follow-on order from a valued repeat customer for two Capstone C1000S microturbines. The newly commissioned units will provide primary power for midstream compressor stations in the Permian Basin, furthering the customer's adoption of Capstone's low-emission and efficient energy solutions. The project underscores the increasing demand for clean, reliable power in remote areas.

The repeat customer had previously rented eight C1000S microturbines for similar applications, gaining firsthand experience with the reliability, low emissions, and operational efficiency of Capstone's technology. This positive experience made the decision to purchase 2MW of microturbine power a straightforward choice for the operator, enabling it to achieve a permanent, self-sufficient power solution for its facilities.

"Capstone's microturbines deliver the performance and reliability our midstream customers demand while addressing increasingly stringent environmental regulations," said Vince Canino, President and CEO of Capstone Green Energy. "The customer's decision to purchase additional units after a successful rental experience demonstrates the trust we've earned as a provider of flexible, low-emission solutions that meet critical energy needs while advancing sustainability goals."

The new microturbines will operate on pipeline-quality natural gas, enabling a flexible and cost-effective energy source for the operator. With no access to power in the foreseeable future, Capstone's microturbines offered a reliable and quickly deployable solution to bring their facility online. The low emissions profile of the microturbines also made permitting through the New Mexico Air Quality Bureau (NMAQ) straightforward, further expediting the project timeline.

"Our customers in the Permian Basin face growing pressure to reduce emissions while ensuring operational reliability," said Sam Henry, President at Horizon Power Systems. "The long-term performance of Capstone's microturbines, coupled with their ability to reduce emissions and provide dependable power, made them the clear choice for this project."

The deployment of the microturbines ensures the customer can maintain operational timelines and meet critical project milestones, further reinforcing Capstone's position as a trusted partner in the oil and gas sector.

About Capstone Green Energy

For almost four decades, [Capstone Green Energy](#) has been at the forefront of clean technology using microturbines, revolutionizing how businesses manage their energy supply on a sustainable basis. In partnership with our worldwide team of dedicated distributors, we have shipped over 10,000 units to 83 countries, lowering our clients' carbon footprint with highly efficient on-site energy systems and microgrid solutions.

Today, our commitment to a cleaner future is unwavering. We offer customers a range of microturbine products ranging from 65kW to multiple MW's for the commercial, industrial, and utility-scale spaces uniquely tailored to their specific needs. Capstone's solutions portfolio not only showcases our core clean technology microturbines but also includes flexible Energy-as-a-Service (EaaS) offerings, including build, own, and operate models, as well as rental services.

Capstone's fast, turnkey power rental solutions are intended to address customers with limited capital or short-term needs; for more information, contact rentals@CGRNenergy.com.

In our pursuit of cutting-edge solutions, we've forged strategic partnerships to extend our impact. Through these collaborations, we proudly offer solutions that utilize renewable gas products and heat recovery solutions. These solutions greatly enhance the sustainability and efficiency of our client's operations while contributing to a cleaner and more responsible sustainable energy landscape.
