

Equinix Sees Accelerating Globalization in Financial Markets in 2012

Top exchanges expanding customer access models, tapping “information hubs” in new geographies

REDWOOD CITY, Calif.--(BUSINESS WIRE)-- [Equinix, Inc.](#) (Nasdaq: [EQIX](#)), the global interconnection and data center company, today announced [that](#) it is seeing a rapid increase in stock exchanges extending their customer access models by placing electronic access nodes in foreign markets. Already home to more than 75 exchanges and trading venues around the globe, Equinix has recently announced new projects with the Toronto Stock Exchange (TMX), New York Stock Exchange (NYSE), Australian Securities Exchange (ASX), and Moscow Exchange (MICEX RTS). Equinix also announced today that [MIAX Options Exchange \(MIAX\) has selected Equinix International Business Exchange™ \(IBX®\)](#) data centers for its primary, backup and disaster recovery sites for its new options exchange trading platform.

For more than two decades, the expansion of electronic trading in financial markets has brought lower costs and a greater ability to manage risk in the increasingly complex global economy. Accelerated by the Great Recession, this long-term trend has also put pressure on margins across the trade cycle, forcing both incumbent and upstart venues to diversify their investor base by expanding customer access models to attract valuable multinational customers.

“Since 2011, we’ve seen a more than fivefold increase in the number of venues reaching outside their home markets,” said [John Knuff](#), general manager, Global Financial Services for Equinix. “The trend is being driven by a steady broadening of trading strategies that extend beyond a single venue, geography or asset class. As markets become more interrelated, investors are seeking local access to foreign markets and forward-thinking exchanges are delivering these types of solutions in greater numbers.”

Knuff is seeing a huge upsurge in 'multi-asset connectivity' as trading firms position infrastructure among numerous venues within the same facility, or data center campus, that trade both the same and diverse instrument types. The major caveat, he adds, is the physical proximity of these firms to multiple trading venues, data sources and counterparties. “Distance from key financial cities is the barrier for firms trading on multiple venues. If they can access your exchange’s data locally, that eliminates this barrier. If they have to long-haul the data, then that can present a problem”, Knuff explained. “The value in cutting-edge software and systems is only present if those assets are well-connected, wherever possible, to the markets and data sources that firm employs.”

When exchanges deploy access nodes and provide market data inside liquidity hubs — or “information hubs” — trading venues are giving trading firms the ability to connect to multiple global data sources from one location. In an environment where both speed and efficiency are critical to not just success, but viability, information hubs are enabling these organizations to trade smarter while maintaining agility.

[Platform Equinix](#)[™] provides an entire [financial services ecosystem](#) of more than 725 business including exchanges and trading platforms, top market data vendors, a myriad of service providers, and hundreds of buy-side and sell-side firms.

Today, businesses leverage the Equinix interconnection platform in 30 strategic markets across the Americas, EMEA and Asia-Pacific. www.equinix.com.

Forward Looking Statements

This press release contains forward-looking statements that involve risks and uncertainties. Actual results may differ materially from expectations discussed in such forward-looking statements. Factors that might cause such differences include, but are not limited to, the challenges of acquiring, operating and constructing IBX centers and developing, deploying and delivering Equinix services; unanticipated costs or difficulties relating to the integration of companies we have acquired or will acquire into Equinix; a failure to receive significant revenue from customers in recently built out or acquired data centers; failure to complete any financing arrangements contemplated from time to time; competition from existing and new competitors; the ability to generate sufficient cash flow or otherwise obtain funds to repay new or outstanding indebtedness; the loss or decline in business from our key customers; and other risks described from time to time in Equinix’s filings with the Securities and Exchange Commission. In particular, see Equinix’s recent quarterly and annual reports filed with the Securities and Exchange Commission, copies of which are available upon request from Equinix. Equinix does not assume any obligation to update the forward-looking information contained in this press release.
