Equinix to Connect its Data Centers Globally to Expand Interconnection Opportunities for Businesses

World's Leading Interconnection and Data Center Company to Deliver On-Demand Access to Its Global Platform from Any Location

REDWOOD CITY, Calif., Dec. 4, 2017 /PRNewswire/ -- [Equinix, Inc.](#) (Nasdaq: EQIX), the global [interconnection](#) and data center company, today announced the next phase in the evolution of its global platform through the direct physical and virtual connection of its International Business Exchange™ (IBX®) data centers around the world, enabling customers to connect on demand to any other customer from any Equinix location. Over the coming months, Equinix will announce a series of coverage, connectivity and service initiatives that will deliver increasing value to customers by enabling them to rapidly scale their digital businesses through a dynamic data center and interconnection platform.

The new inter-metro connectivity will be delivered through the Equinix Cloud Exchange™ (ECX), which has been renamed the Equinix Cloud Exchange™ Fabric (ECX Fabric). It will leverage the software-defined networking (SDN) capabilities currently built into ECX to enable any customer to dynamically connect its own infrastructure across Equinix locations or connect to any other customer on the Equinix global platform, regardless of location. Customers can customize their connectivity to partners, customers and suppliers through an interface that provides all the benefits companies have come to expect from "as-a-service" models. This includes real-time provisioning via a portal or API, pay-as-you-go billing increments and the removal of friction in establishing elastic connectivity between metros.

The new ECX Fabric capabilities are immediately available in all [ECX locations](#) in North America and the EMEA region, including Amsterdam, Atlanta, Chicago, Dallas, Dublin, Frankfurt, London, Los Angeles, Manchester, New York, Paris, Seattle, Silicon Valley, Stockholm, Toronto, Washington, D.C. and Zurich. In Q4 2017 and early 2018, ECX Fabric is rolling out to seven new metros in the Americas and EMEA regions (Denver, Düsseldorf, Geneva, Helsinki, Miami, Milan and Munich). Equinix will extend connectivity to São Paulo within the Americas region, and between APAC region ECX Fabric metro locations (Hong Kong, Melbourne, Osaka, Singapore, Sydney and Tokyo), in 2018.

With this expansion, any Equinix customer will be able to more efficiently interconnect its global infrastructure and request connections to any of the more than 1,000 participants on ECX Fabric today. This includes some of the world's largest enterprises, cloud service providers (including Alibaba Cloud, Amazon Web Services, Google Cloud Platform, IBM Cloud, Microsoft Azure and Oracle Cloud) and SaaS providers (including Salesforce, SAP and ServiceNow, among others).

Highlights/Key Facts

- The inter-metro integration of the Equinix global platform will enable companies to reach their entire digital ecosystem, including new and existing customers and partners, on demand, through one connection to the world. It unlocks and further extends the global value, simplicity and consistency of connectivity through Platform Equinix™, which currently spans 190 IBX data centers in 48 markets and includes more than 9,500 of the world's leading businesses.
 - **Benefits to enterprises** include the ability to rapidly scale their digital business operations globally by connecting privately and securely to a greater set of business partners and destinations. This includes both cloud service provider on-ramps within a metro or across other metros for the establishment of geo-redundant multicloud and hybrid cloud architectures, as well as connections between a customer's distributed points of presence essential to solving for distributed applications and today's demanding big data use cases. Equinix enables businesses to rapidly scale in an environment that offers unmatched physical security coupled with the digital security benefits of directly connecting to strategic business partners outside of the public internet.
 -

Benefits to service providers: Cloud service providers will have the ability to easily extend their reach to a rapidly expanding global base of enterprise buyers via private connections that provide a more consistent user experience. Network service providers will have the ability to more easily connect to geo-diverse cloud on-ramps in more metros, and to more easily establish network connections to destinations in which they do not yet have a physical presence, increasing their addressable market.

- As the world's leading companies increasingly shift to digital business models, [interconnection](#) with key business partners and customers is becoming an important element of their digital supply chain. Interconnection enables seamless, on-demand, direct and private access to virtually any counterparty—from cloud service providers to strategic business partners to networks to SaaS providers—without traversing the public internet or a WAN. This approach allows companies to boost application performance, reduce latency, increase security, and improve network control and visibility.
- Since 2014, ECX has provided virtualized, private and direct connections to the world's largest clouds. With today's announcement, ECX has evolved from a platform for cloud connectivity to a multipurpose interconnection exchange that further simplifies the process by which companies implement interconnection across customers, partners and suppliers.
- Private interconnection is a rapidly growing business practice for leading companies as their businesses become increasingly digital. According to the [Global Interconnection Index](#), a market study published recently by Equinix, the capacity for private data exchange between businesses is outpacing the public internet, growing at nearly twice the rate and comprising nearly six times the volume of global IP traffic by 2020.
- As a part of today's announcement of the expansion of the Equinix global platform, the company also announced the extension of the Equinix Internet Exchange into nine new metros in the EMEA and Americas regions (see separate Equinix press release issued today).

Quotes

- **John Nishimoto, Vice President of Product Management and Marketing, Windstream**

"The integration of the Equinix global platform expands Windstream's addressable footprint, increasing the availability of high-transport solutions—including our recently launched Software Defined Network Orchestrated Waves (SDNow)—for our customers. Equinix has a robust aggregation of enterprise businesses, cloud service providers and traditional network operators, all of whom are customers of Windstream's Cloud & Connectivity business unit. We look forward to participating in this fully integrated global platform."

- **Eric Hanselman, Chief Analyst, 451 Research**

"Until now Equinix has operated data centers that are highly interconnected within their metro areas. Now Equinix is moving to fully interconnect its global platform, enabling companies to directly connect physically or virtually to customers, vendors and partners, and between their own points of presence, from any Equinix facility. This new interconnection opens a range of possibilities for Equinix customers. It also has the potential for Equinix to deliver a greater breadth of services across its newly globally interconnected platform."

- **Sara Baack, Chief Marketing Officer, Equinix**

"As digital transformation intensifies, business possibilities have no limits and neither should an organization's IT infrastructure. Building a digital business requires the ability to reach strategic global destinations on demand, to access everyone that matters, and to bring people, clouds, data and things together. Today's announcements and our future product and services roadmap are aimed at leveraging the Equinix global platform to serve as a strategic partner for companies on this journey."

In 48 markets worldwide, Equinix is where companies come together to realize new opportunities and accelerate their business, IT and cloud strategies. www.equinix.com/

Forward Looking Statements

This press release contains forward-looking statements that involve risks and uncertainties. Actual results may differ materially from expectations discussed in such forward-looking statements. Factors that might cause such differences include, but are not limited to, the

challenges of acquiring, operating and constructing IBX data centers and developing, deploying and delivering Equinix services; unanticipated costs or difficulties relating to the integration of companies we have acquired or will acquire into Equinix; a failure to receive significant revenue from customers in recently built out or acquired data centers; failure to complete any financing arrangements contemplated from time to time; competition from existing and new competitors; the ability to generate sufficient cash flow or otherwise obtain funds to repay new or outstanding indebtedness; the loss or decline in business from our key customers; and other risks described from time to time in Equinix filings with the Securities and Exchange Commission. In particular, see recent Equinix quarterly and annual reports filed with the Securities and Exchange Commission, copies of which are available upon request from Equinix. Equinix does not assume any obligation to update the forward-looking information contained in this press release.
