

Company Overview

Lantern Pharma is a clinical stage biotechnology company focused on innovating the cancer drug development process by rescuing and repositioning drug candidates that others have tried, but failed, to develop and developing new drugs of its own using advanced genomics and artificial intelligence ("AI"). Lantern leverages advances in machine learning, genomics and artificial intelligence by using a proprietary AI platform to discover biomarker signatures aimed at helping identify patients more likely to respond to our pipeline of cancer therapeutics. Lantern's focus is to improve the outcome for patients by leveraging our technology to uncover, rescue and develop abandoned or failed drugs. Lantern seeks out experienced industry partners, world-class scientific advisors and innovative clinical-regulatory approaches to assist with its objective of delivering cancer therapies to patients as quickly and efficiently as possible.

Lantern's current therapy product pipeline consists of three drug candidates, two in clinical stages and one in preclinical, all focusing on cancers that have distinct and unmet clinical needs with a clearly defined patient population. Lantern believes that the use of machine learning, genomics and computational methods can help accelerate the development and commercialization of small molecule-based therapies. These drugs can be targeted to patients whose genomic profile identifies them as having the highest probability of benefiting from the drug, thereby creating the potential to achieve better outcomes.
