Business Segment: ELECTRONICS

PHOTOMASK MAKER COMPUGRAPHICS TO EXHIBIT AT THE 2019 PHOTONICS SHOW

(Waterbury, CT USA) - Compugraphics, a leading brand of photomasks within the newly formed MacDermid Alpha Electronics Solutions business, announces they will exhibit at the 2019 SPIE Photonics West show, February 5 – 7 at the Moscone Center in San Francisco, CA. They will showcase their complete line of products at one of the world's largest photonics technologies events.

The team of experts will be on hand to discuss their wide range of offerings in the semiconductor, optoelectronics, photonics, and MEMS and Nanotechnology markets. Beyond silicon, Compugraphics technology enables precision imaged glass parts such as lenses, gratings, calibration tools for machine vision systems, reticles for microscopes, measurement templates, resolution targets and optical encoders to name a few. Expert staff will also discuss how they partner with clients to provide technical team support every step of the way. With locations in the Bay Area of California, Texas, Germany, Scotland and Singapore, they ensure fast response and quick-turn service.

Craig Durgy, Director of Sales North America, said, "We're enthusiastic to show the many applications of our Compugraphics technology. Being part of a now 1.2 billion dollar electronics company, gives us leverage to support the larger industry customers, while maintaining a personal level of service for any size customer or job."
