## **ITUS Announces Issuance of Second Key Cancer Detection Technology Patent**

SAN JOSE, Calif., March 26, 2018 /PRNewswire/ -- ITUS Corporation (NASDAQ: ITUS), a company using the power of the immune system to diagnose and treat cancer, today announced that the United States Patent and Trademark Office ("USPTO") has issued US Patent No. 9,934,364. This is the second and very critical patent filed by the company to protect its cancer detection technology. This patented technology is a key component of Cchek™, ITUS' early cancer detection platform.

The patent is titled, "METHODS FOR USING ARTIFICIAL NEURAL NETWORK ANALYSIS ON FLOW CYTOMETRY DATA FOR CANCER DIAGNOSIS", and the inventors are Dr. Amit Kumar, John Roop, and Anthony Campisi. This patent is assigned wholly to Anixa Diagnostics Corp. a wholly owned subsidiary of ITUS Corporation.

Dr. Amit Kumar, ITUS' Chairman and CEO, stated, "The claims of this patent were allowed in November of 2017, and we are pleased that this key patent has now issued. Our approach to detecting cancer relies on monitoring an individual's immune system to identify indicators of a tumor. By measuring subsets of circulating white blood cells using flow cytometry, and performing analysis using an Artificial Intelligence (AI) application, known as a Neural Network, we have shown that we are able to effectively identify tumor-bearing individuals. The claims of patent 9,934,364 cover the key attributes of this technology, and we expect to file for additional patent protection as the development of Cchek™ continues. We have also filed a PCT to enable broader geographic protection of our technology."

Dr. Kumar added, "With this patent now issued, and the key technology underlying Cchek™ adequately protected, we are better positioned to enhance our discussions with potential partners and to further expand the number of potential partners throughout the world."

ITUS will be presenting data from studies utilizing this technology at the following scientific meetings over the next two months:

- Keystone Symposia Conference, Cancer Immunotherapy: Combinations in Montreal, Quebec. This conference is currently ongoing through March 27.
- American Association of Cancer Research, Annual Meeting in Chicago, IL, April 14-18.
- American Association of Immunologists Meeting in Austin, TX, May 4-8.

## ITUS Corporation

[ITUS](#), a cancer-focused biotechnology company, is harnessing the body's immune system in the fight against cancer. Its wholly owned subsidiary, Anixa Diagnostics Corporation, is developing the Cchek™ platform, a series of non-invasive blood tests for the early detection of solid tumor based cancers, which is based on the body's immunological response to the presence of a malignancy. Its majority owned subsidiary, Certainty Therapeutics, Inc., is developing CAR-T based immuno-therapy drugs which genetically engineer a patient's own immune cells to fight cancer. ITUS also continually examines emerging technologies in complementary or related fields for further development and commercialization.
