Anixa Biosciences Announces Presentation at the 2019 San Antonio Breast Cancer Symposium

SAN JOSE, Calif., Dec. 2, 2019 /PRNewswire/ --Anixa Biosciences, Inc. (NASDAQ: ANIX), a biotechnology company focused on harnessing the body's immune system in the fight against cancer, today announced that data from its ongoing studies utilizing Cchek™, its artificial intelligence (AI) driven early cancer detection technology will be presented during a poster session at the San Antonio Breast Cancer Symposium (SABCS).

The symposium takes place December 10 – 14, 2019 in San Antonio, TX, and is designed to provide state-of-the-art information on the experimental biology, etiology, prevention, diagnosis, and therapy of breast cancer and premalignant breast disease. The meeting will be attended by both U.S. and international researchers and healthcare professionals who are involved in breast cancer research and clinical care.

Poster presentation details are as follows:

Title: Combining HyperVOX with pattern recognition neural networks: A new method for analyzing flow cytometry-based immunophenotyping data for increased early detection of stage I/II breast cancer (BCa)

Authors: George A. Dominguez, Ph.D.; John Roop; Alex Polo; Anthony J. Campisi; Dmitry I. Gabrilovich, MD, Ph.D.; Amit Kumar, Ph.D.

Poster Session and Number: Session 5, P5-01-16

Location: Henry B. Gonzalez Convention Center, Hall 1

Date and Time: Friday, December 13, 2019 (5:00 PM – 7:00 PM CT)

To receive a copy of the presentation, please email your request toSABCS-2019@anixa.com starting December 14, 2019 and include your name, title, and contact information.

About Cchek™

Cchek™ is an early cancer detection technology, that measures a patient's immunological response to a malignancy by analyzing immune system cells in peripheral blood. The goal is to utilize the technology to determine a patient's cancer status from a simple blood draw, eliminating the need for a biopsy, which can be an expensive, painful and invasive procedure. Further, conventional methods using current cancer screening tests often lack accuracy and reliability. Anixa's orthogonal approach using flow cytometry coupled with artificial intelligence provides an alternative method that offers improved affordability, efficacy and efficiency. To date, Anixa has successfully used Cchek™ to detect the presence of 20 different cancers including lung, colon, breast and prostate. The robust cancer detection performance of Cchek™ makes it a platform from which multiple cancer diagnostic tests may be developed. The first such test, a prostate cancer confirmation test, is slated for commercial launch by the end of 2019.

About Anixa Biosciences, Inc.
Anixa is a publicly-traded biotechnology company focused on harnessing the body's immune system in the fight against cancer. Anixa's therapeutic portfolio includes a cancer vaccine technology focused on the immunization against α-Lactalbumin to prevent triple negative breast cancer (TNBC), as well as a cancer immunotherapy program which uses a novel type of CAR-T, known as chimeric endocrine receptor T-cell (CER-T) technology. The company's diagnostic portfolio consists of Cchek™, a liquid biopsy technology for early detection of solid tumors based on the body's immune response to the presence of a malignancy. Anixa continually examines emerging technologies in complementary fields for further development and commercialization. Additional information is available at www.anixa.com.
