Anixa Biosciences' Ovarian Cancer CAR-T Therapy to be Presented at the Rivkin Center & American Association of Cancer Research (AACR) 14th Biennial Ovarian Cancer Research Symposium

SAN JOSE, Calif., Sept. 12, 2022 /PRNewswire/ -- [Anixa Biosciences, Inc.](#) (NASDAQ: ANIX), a biotechnology company focused on the treatment and prevention of cancer and infectious diseases, today announced that the inventor of its ovarian cancer CAR-T technology, Dr. Jose Conejo-Garcia, Senior Member of the Immunology Department at Moffitt Cancer Center, will be speaking at the Rivkin Center and American Association for Cancer Research (AACR) 14th Biennial Ovarian Cancer Research Symposium. The symposium will include a seminar on immuno-oncology on Wednesday, September 28, 2022, at which Dr. Conejo-Garcia is an invited lecturer.

During the presentation, Dr. Conejo-Garcia will discuss the CAR-T technology, which is an autologous cell therapy comprised of engineered T-cells that target the follicle stimulating hormone receptor (FSHR). FSHR is found at immunologically relevant levels exclusively on the granulosa cells of the ovaries. Since the target is a hormone receptor, and the target-binding domain is derived from its natural ligand, this technology is also known as CER-T (Chimeric Endocrine Receptor T-cell) therapy, a new type of CAR-T. Dr. Conejo-Garcia will also discuss the ongoing Phase 1 clinical trial of this technology.

"I am excited to discuss our novel FSHR-mediated CAR-T technology at this seminar series and to share ideas and advance the field of ovarian cancer research," stated Dr. Conejo-Garcia. "Moffitt and Anixa have been working together to advance this ovarian cancer therapy and we are thrilled to have treated the first patient in our ongoing clinical trial. If this therapeutic approach is successful, this could enable a major shift in the overall treatment paradigm for ovarian cancer."

More information about the event may be found at: <https://rivkin.org/symposia/ocrs/>.

About Anixa Biosciences, Inc.

Anixa is a clinical-stage biotechnology company with a number of programs addressing cancer and infectious disease. Anixa's portfolio of therapeutics includes a cancer immunotherapy program being developed in collaboration with Moffitt Cancer Center, which uses a novel type of CAR-T, known as chimeric endocrine receptor T-cell (CER-T) technology, and, with partner MolGenie GmbH, a COVID-19 program focused on compounds targeting the M^{pro} enzyme of SARS-CoV-2, which is largely conserved across all recently identified variants. The company's vaccine portfolio includes a novel vaccine being developed in collaboration with Cleveland Clinic to prevent breast cancer – specifically triple negative breast cancer (TNBC), the most lethal form of the disease – as well as a vaccine to prevent ovarian cancer. These vaccine technologies focus on immunizing against "retired" proteins that have been found to be expressed in certain forms of cancer. Anixa's unique business model of partnering with world-renowned research institutions on clinical development allows the company to continually examine emerging technologies in complementary fields for further development and commercialization.
