Soliton Announces Submission for IRB Approval of Pivotal Cellulite Trial Protocol

HOUSTON, July 16, 2019 /PRNewswire/ -- Soliton, Inc., (Nasdaq: SOLY) ("Soliton" or the "Company"), a medical device company with a novel and proprietary platform technology licensed from The University of Texas on behalf of the MD Anderson Cancer Center ("MD Anderson"), today announced that the company has submitted its pivotal cellulite clinical trial protocol for independent Institutional Review Board ("IRB") approval.

Join our more than 200K fans here to follow the Company <https://soly-investors.com>.

Dr. Chris Capelli, President, CEO and co-founder of Soliton explained, "We have submitted our protocol for the pivotal cellulite study to Advara for review and approval. Based on the encouraging results we recently announced from our proof of concept cellulite trial, we expect this larger pivotal trial to form the basis for FDA clearance of our Rapid Acoustic Pulse (RAP) device. We hope to receive approval from the IRB in the very near future which will enable us to move forward with the site initiation visits and ultimate treatment of patients in this important study."

About Soliton, Inc.

Soliton, Inc. is a medical device company with a novel and proprietary platform technology licensed from MD Anderson. The Company's first FDA cleared commercial product will use rapid pulses of acoustic shockwaves as an accessory to lasers for the removal of unwanted tattoos. The Company is based in Houston, Texas, and is actively engaged in bringing the Rapid Acoustic Pulse ("RAP") device to the market. The Company believes this "Soliton" method has the potential to lower tattoo removal costs for patients, while increasing profitability to practitioners, compared to current laser removal methods. Soliton is investigating potential additional capabilities of the RAP technology in preclinical testing, including the potential to assist existing fat reduction technology in the reduction of fat as well as improving the appearance of cellulite by creating mechanical stress at the cellular level and inducing significant collagen growth.
