Soliton Appoints Robert "Joe" Mills as Vice President of Supply Chain

HOUSTON, Jan. 7, 2020 /PRNewswire/ -- Soliton, Inc., (Nasdaq: SOLY) ("Soliton" or the "Company"), a medical device company with a novel and proprietary platform technology licensed from The University of Texas on behalf of the MD Anderson Cancer Center ("MD Anderson"), today announced the appointment of Robert "Joe" Mills as Vice President of Supply Chain, effective as of January 2, 2020.

Mr. Mills has over three decades of extensive experience in supply chain operations. Most recently, he was Senior Director of Supply Chain at Icelandic Milk & Skyr where he was responsible for supply chain, logistics, project management, and the customer service and quality departments. Prior to this, Mr. Mills served as Vice President of Global Operations at LumaTherm Inc. and Director of Logistics at Advocates for Human Potential, Inc. (AHP).

Dr. Chris Capelli, Soliton's President, CEO and co-founder, commented, "We are excited to bring Joe on board and believe he will be a significant asset to Soliton as he possesses valuable experience through his extensive history in supply chain and operational logistics. Joe joins Soliton at a critical point for the Company and Joe's leadership will be indispensable as we prepare for the limited launch of our Rapid Acoustic Pulse device this year."

About Soliton, Inc.

Soliton, Inc. is a medical device company with a novel and proprietary platform technology licensed from MD Anderson. The Company's first FDA cleared commercial product will use rapid pulses of acoustic shockwaves as an accessory to lasers for the removal of unwanted tattoos. The Company is based in Houston, Texas, and is actively engaged in bringing the Rapid Acoustic Pulse ("RAP") device to the market. The Company believes this "Soliton" method has the potential to lower tattoo removal costs for patients, while increasing

profitability to practitioners, compared to current laser removal methods. Soliton is investigating potential additional capabilities of the RAP technology in clinical and preclinical testing, including the potential to improve the appearance of cellulite by creating mechanical stress at the cellular level and inducing significant collagen growth and the potential to treat keloid and hypertrophic scars by targeting the stiffened environment in the intracellular matrix.
