Airgain Secures Multi-year, Multi-million Dollar Design Win with Tier 1 US Carrier's Next Gen Wi-Fi 7 Fiber Gateway

SAN DIEGO--(BUSINESS WIRE)-- Airgain, Inc. (NASDAQ: AIRG), a leading provider of wireless connectivity solutions, announced that it has secured a design win with a leading global CPE manufacturer for a next-generation Wi-Fi 7 fiber broadband gateway being developed for a major North American broadband operator. The new platform is targeted for commercial launch in the second half of 2026, and we expect shipments to reach more than 5 million units within 5 years – positioning Airgain for meaningful revenue growth within its embedded antenna business.

This design win underscores Airgain's leadership in embedded antenna technology and its ability to deliver high-performance solutions for next-generation connectivity. Airgain is currently engaged in multiple development programs for Wi-Fi 7 and 5G technologies, as well as joint efforts with leading ODM partners on early Wi-Fi 8 platform designs. These initiatives underscore Airgain's position as a trusted technology partner driving innovation for the next wave of connected solutions.

"Airgain has built decades of leadership in embedded antenna technology by partnering closely with OEMs and ODMs to push wireless performance further with each generation," said Brian Makarowski, Vice President of Product Management and Product Marketing at Airgain. "Our customers trust us to bring antenna innovation that scales across Wi-Fi 7, Wi-Fi 8, and future 5G ecosystems — enabling the connected experiences their end users demand."

Airgain has a long legacy of providing antenna design, testing, and competitive benchmarking services for its customers. The company supports its partners throughout the entire product lifecycle—from concept and design through validation and post-launch benchmarking—ensuring that each product achieves optimal RF performance in real-world environments. These services enable Airgain's customers, including many of the world's leading MNOs, MSOs, and wireless service providers, to deliver best-in-class connectivity experiences to their end users.

"Our embedded antenna business has been one of the foundational pillars of Airgain's success," said Jacob Suen, CEO of Airgain. "It established our reputation for engineering excellence and continues to propel our expansion into advanced connectivity markets. As we grow our next-generation product lines, including AirgainConnect® Fleet™ and Lighthouse™, we're building on that same foundation of innovation and customer partnership that has defined Airgain since its beginning."

About Airgain, Inc.

Headquartered in San Diego, California, Airgain Inc. (NASDAQ: AIRG) is a leading provider of advanced wireless connectivity solutions that drive innovation in 5G, Wi-Fi, and IoT technology. We are committed to delivering high-performance, cost-effective, and energy-efficient wireless solutions that enable rapid market deployment. Our mission is to connect the world through integrated, innovative, and optimized wireless solutions. Our diverse product portfolio serves three primary markets: enterprise, automotive, and consumer.
