ITUS Will Present Early Cancer Detection Data at ASCO-SITC Symposium on January 26

SAN JOSE, Calif., Jan. 22, 2018 /PRNewswire/ -- ITUS Corporation (NASDAQ: ITUS), today announced again that it will be presenting data on its early cancer detection technology on January 26th at the American Society of Clinical Oncology-Society for Immunotherapy of Cancer (ASCO-SITC) Clinical Immuno-oncology Symposium in San Francisco, CA.

The presentation abstract titled, "*The coupling of MDSCs with a computational analytic method to detect solid tumors*," will be released on January 22nd, however the underlying data will be kept confidential until the presentation on January 26th. Myeloid-derived suppressor cells, or MDSCs, are a key group of white blood cells that form the foundation for ITUS' liquid biopsy technology.

The presentation will focus on ITUS' proprietary Cchek™ platform which couples immuno-oncology and artificial intelligence technologies to enable the detection of solid tumors from a blood sample.

"We are looking forward to sharing our data with the scientific community," stated Dr. Amit Kumar, President and CEO of ITUS Corporation. Dr. Kumar added, "This announcement repeats information we provided in our press release of December 6, 2017. We are reissuing this information as we have had questions from shareholders indicating there is some confusion about when our data will be released. As noted in this press release and the previous release, the ABSTRACT of the presentation will become public on January 22nd. The data presentation will occur on January 26, 2018, after which the presentation will be publicly available. We have provided instructions for requesting a copy of the presentation and we will begin emailing the poster to interested parties, beginning on January 29. The presentation will be highly technical in nature, so on January 29, 2018, the Monday after the presentation, we will issue a press release summarizing the data and conclusions."

The symposium will be held on January 25-27, 2018, and will be attended by the leading

scientific minds in the field of immuno-oncology from across the world. All abstracts for the Symposium are currently confidential, but will be released by ASCO on January 22, 2018 at 5:00 PM EST on abstracts.asco.org. To receive a copy of the presentation, please send your request to ASCO-SITC-2018@ITUScorp.com after January 26, 2018 and include your name, title, and contact information.

ASCO-SITC

The ASCO-SITC Clinical Immuno-Oncology Symposium (<https://immunosym.org>) is a three-day meeting focused on clinical and translational research in immuno-oncology and the implications for clinical care.

ASCO (www.asco.org) was founded in 1964 and is the world's leading professional organization for physicians and oncology professionals caring for people with cancer.

SITC (www.sitcancer.org) was found in 1984 and is the world's leading member-driven organization specifically dedicated to improving cancer patient outcomes by advancing the science and application of cancer immunotherapy.

ITUS Corporation

[ITUS](http://www.ITUScorp.com), a cancer-focused biotechnology company, is harnessing the body's immune system in the fight against cancer. Its wholly owned subsidiary, Anixa Diagnostics Corporation, is developing the Cchek™ platform, a series of non-invasive blood tests for the early detection of solid tumor based cancers, which is based on the body's immunological response to the presence of a malignancy. Its majority owned subsidiary, Certainty Therapeutics, Inc., is developing CAR-T based immuno-therapy drugs which genetically engineer a patient's own immune cells to fight cancer. ITUS also continually examines emerging technologies in complementary or related fields for further development and commercialization. Additional information is available at www.ITUScorp.com.
