Anixa Biosciences Congratulates Scientific Advisory Board Member Dr. H. Michael Shepard as a 2019 Lasker Award Honoree

SAN JOSE, Calif., Sept. 16, 2019 /PRNewswire/ --[Anixa Biosciences, Inc.](#) (NASDAQ: ANIX), a biotechnology company focused on harnessing the body's immune system to fight cancer, congratulates H. Michael Shepard, Ph.D., a member of Anixa's Scientific Advisory Board, as a recipient of the 2019 Lasker-DeBakey Clinical Medical Research Award in recognition of his research work in improving patient lives in the field of oncology.

Dr. Shepard is one of three scientists accepting this year's Lasker award for the development of the anti-cancer drug Herceptin (trastuzumab) for the treatment for HER2-positive breast cancer. Herceptin has also been proven to be effective in treating ovarian and gastric cancer patients.

Created in honor of the Mary and Albert Lasker Foundation, the Lasker Awards program acknowledges the biological discoveries and clinical advances that improve human health and draw attention to public support of science. Today, the Lasker Awards are the most prestigious biomedical research prizes in the U.S., and often precede a Nobel Prize.

"We are pleased that Dr. Shepard has been appropriately recognized for his pioneering work on developing a revolutionary therapy for breast cancer. Worldwide, nearly two and a half million breast cancer patients have been treated with trastuzumab. Mike has been a good friend, advisor and mentor to me for two decades. I am pleased that a scientist of his stature is a scientific advisor to Anixa, especially as we embark on the development of a revolutionary breast cancer vaccine in collaboration with the Cleveland Clinic," stated Dr. Amit Kumar, Chairman and Chief Executive Officer of Anixa. "Mike and his colleagues ushered in the age of monoclonal antibodies for the targeted treatment of cancer. Trastuzumab, marketed as Herceptin by Genentech, was the first monoclonal antibody approved to treat cancer, but since its approval numerous other antibodies have been approved and used to treat tens of millions of cancer patients."

More information about the award and the development of Herceptin is available at the

About Dr. H. Michael Shepard

Dr. Shepard is an American cancer researcher. He received a Ph.D. in Molecular, Cellular and Developmental Biology from the Indiana University and later became a Damon-Runyon Cancer Fellow. From 1980 to 1992, Shepard worked at Genentech, where he managed an extramural program that created much successful collaboration with the academic community, including studies that led to Remicade, which is now used to treat multiple autoimmune diseases. Shepard's main discovery was the first biomarker-driven drug known as Herceptin. The drug was the first proof of principle that an antibody can be used to treat solid tumors, as well as the first demonstration that tyrosine kinases (enzymes that transfer phosphates inside a cell) are valid targets for treating cancer.

About Anixa Biosciences, Inc.

Anixa is a publicly-traded biotechnology company focused on harnessing the body's immune system in the fight against cancer. Anixa's therapeutic portfolio includes a cancer vaccine technology focused on the immunization against α -Lactalbumin to prevent triple negative breast cancer (TNBC), as well as a cancer immunotherapy program which uses a novel type of CAR-T, known as chimeric endocrine receptor t-cell (CER-T) technology. The company's diagnostic portfolio consists of Cchek™, a liquid biopsy technology for early detection of solid tumors based on the body's immune response to the presence of a malignancy. Anixa continually examines emerging technologies in complementary fields for further development and commercialization. Additional information is available at www.anixa.com.
