Anixa Biosciences to Participate in Water Tower Research Insights Conference on April 14, 2026

Breast cancer vaccine met primary endpoints and generated protocol-defined immune responses in 74% of participants in Phase 1 clinical trial

Ovarian cancer CAR-T therapy, lira-cel, exhibiting positive survival data in ongoing Phase 1 clinical trial

SAN JOSE, Calif., April 7, 2026 /PRNewswire/ -- [Anixa Biosciences, Inc.](#) ("Anixa" or the "Company") (NASDAQ: ANIX), a biotechnology company focused on the treatment and prevention of cancer, today announced that Dr. Amit Kumar, Anixa's Chairman and CEO, will participate in the upcoming Water Tower Research (WTR) Insights Conference on April 14, 2026, at 12:30 pm ET.

The presentation will be hosted by WTR Analyst, Robert Sassoon, Managing Director at Water Tower Research, and will cover several topics, including:

- Overview of the Company and its business model
- Breast cancer vaccine met primary endpoints and generated protocol-defined immune responses in 74% of participants in Phase 1 clinical trial
- Ovarian cancer CAR-T therapy, lira-cel, exhibiting positive survival data in ongoing Phase 1 clinical trial

The WTR Insights Conference is a virtual event designed for investors seeking direct access to company management teams and differentiated insights across innovative businesses spanning all sectors covered by Water Tower Research. Through a series of fireside chat discussions and curated post-event engagement opportunities, attendees will gain a deeper understanding of each company's strategy, competitive positioning, and long-term growth outlook.

Advance registration is encouraged to secure access to the full agenda, company lineup, and live sessions, as well as on-demand replays following the event. Registration may be completed at: [Event Registration](#).

About Anixa Biosciences, Inc.

Anixa is a clinical-stage biotechnology company focused on the treatment and prevention of cancer. Anixa's therapeutic portfolio consists of liraltagene autoleucel, or lira-cel, an ovarian cancer immunotherapy being developed in collaboration with Moffitt Cancer Center, which uses a novel type of CAR-T, known as chimeric endocrine receptor-T cell (CER-T) technology. This technology is differentiated from other cell therapies as the natural ligand of the FSHR receptor, FSH, binds to the FSHR receptor on the tumor cell instead of an antibody fragment. Moffitt is a world leader in cancer immunotherapy treatments, pioneering next-generation cell therapies such as CAR-T, and tumor infiltrating lymphocytes (TILs) to harness the power of the immune system. The Company's vaccine portfolio includes vaccines being developed in collaboration with Cleveland Clinic to treat and prevent breast cancer and ovarian cancer, as well as additional cancer vaccines to address many intractable cancers, including high incidence malignancies in lung, colon, and prostate. These vaccine technologies focus on immunizing against "retired" proteins that have been found to be expressed in certain forms of cancer. The breast and ovarian cancer vaccines were developed at Cleveland Clinic and exclusively licensed to Anixa. Cleveland Clinic is entitled to royalties and other commercialization revenues from the Company related to these vaccine technologies. Anixa's unique business model of partnering with world-renowned research institutions on all stages of development allows the Company to continually examine emerging technologies in complementary fields for further development and commercialization.
