

StreamUnlimited Partners with Summit Semiconductor to enable wireless Multi-channel audio Support for Chromecast built-in Modules

Vienna, Austria – February 2, 2017 – StreamUnlimited, a provider of software solutions and modules for connected audio products, is announcing a partnership with Summit Semiconductor to support home theater and mobile applications. StreamUnlimited will port Summit Semiconductor's Wi-Fi compliant software for multichannel audio to the Stream770 and Stream810 Chromecast built-in modules.

The technology from Summit Semiconductor will enable the StreamUnlimited Wi-Fi based modules to support up to a full 7.1 home theater solution with fixed low latency for video and audio synchronization, while maintaining tight speaker synchronization and eliminating sound field distortion. Both StreamUnlimited modules are pin-compatible for product family development, and feature StreamSDK, the world's richest streaming audio software stack. Stream810 targets the premium segment, while Stream770 addresses the mainstream market with the lowest cost solution capable of powering Chromecast built-in and voice. The flexibility of the StreamUnlimited product portfolio provides customers with the best possible choices in terms of performance and price. Many key OEM and ODM partners have also undertaken StreamSDK training and can support brand customers in developing products quickly and efficiently.

"Consumers are demanding high-quality home theater audio that is easy to set up and complements today's high definition televisions and multichannel content," said Frits Wittgreffe, president of StreamUnlimited. "We are excited about the new technology from Summit Semiconductor and the integration plans to enable our Chromecast built-in modules to support home theater, as well as multi-room applications and voice technology." "Stream Unlimited has been a longtime supporter of Summit Semiconductor and have a proven track record of successfully delivering wireless audio products to key brands," said Tony Parker, vice president of marketing for Summit Semiconductor. "Extending our existing partnership to port our Wi-Fi compliant home theater technology to their modules is a welcomed next step in our relationship, but more importantly will reduce customer integration risk and time to market."

For more information on StreamUnlimited, please visit www.StreamUnlimited.com. About StreamSDK; StreamSDK from StreamUnlimited is a software solution that transports any streaming audio functionality to multiple various consumer electronics devices including Internet radio and music services,
