Ameresco Announces Phase One Completion of Energy Conservation Project with Baltimore City Public Schools

Implemented facility upgrades will reduce utility and operational costs

FRAMINGHAM, Mass. & BALTIMORE--(BUSINESS WIRE)-- [Ameresco, Inc.](https://www.ameresco.com), (NYSE: AMRC), a leading cleantech integrator specializing in energy efficiency and renewable energy, today announced the first phase completion of its \$3.5 million energy conservation project with Baltimore City Public Schools (City Schools). As part of the project, Ameresco provided facility lighting upgrades and enhancements to improve the energy efficiency of 15 school buildings within City Schools.

The project consisted of replacing existing interior and exterior lighting with LED lighting. Compared to the existing lighting, LEDs are more energy efficient, need less maintenance, and provide good quality light for students and staff. Some of the lighting also included occupancy sensors so that the lights will turn off automatically when no one is present. The project is estimated to earn City Schools a \$500,000 rebate from BGE, the local utility, and save over \$400,000 annually in lower electricity costs. The 15 schools include elementary, middle, and high schools located throughout Baltimore City.

“Partnering with Ameresco on this project has provided the improvements we needed. Their support and expertise helped us navigate this important project smoothly and without disturbing student learning,” said Dr. Lynette Washington, Chief Operating Officer. “From the initial investment grade audit to the completion of this first phase of work, Ameresco has helped us generate energy savings and provide enhanced learning environments for our students.”

“With the completion of this project, we continue to expand our presence as a leading provider of energy-efficient solutions to educational institutions across the country. In fact, this project marks our first K-12 energy conservation project in Maryland, and we’re eager to continue our progress of implementing energy efficient and renewable solutions across the state and fostering a cleaner world for generations to come,” said Pete Christakis, Senior Vice President, Construction and Operations, Ameresco.

Construction began in November 2021 and reached completion by May 2022. A second phase of energy efficiency upgrades will be discussed between Ameresco and City Schools in the coming months.
