Soliton Receives Approval for New Patent for its Acoustic Shockwave Technology

HOUSTON, May 14, 2019 /PRNewswire/ -- Soliton, Inc., (NASDAQ: SOLY) ("Soliton" or the "Company"), a medical device company with a novel and proprietary platform technology licensed from The University of Texas on behalf of the MD Anderson Cancer Center ("MD Anderson"), today announced that the Japanese Patent Office has issued a notice of grant of patent Number 6503302, "Rapid Electrohydraulic Shockwave Generator."

Clinical trials for tattoo removals have demonstrated that using the Company's RAP device, in conjunction with a Q-Switched laser, allows for multiple passes of laser treatment in a single treatment session. The current standard of care for tattoo removal is to use a Q-Switched laser to ablate the tattoo ink particles into pieces small enough for the body's natural processes to remove them. Independent studies have shown this standard treatment requires on average ten or more office visits to achieve acceptable results. In our own clinical trial using the RAP device in conjunction with a Q-Switched laser, patients experienced 75% to 100% removal of their tattoos in just three office visits.

Dr. Chris Capelli, President, CEO and Co-Founder of Soliton, said, "Our corporate patent portfolio continues to expand globally as a component of our overall intellectual property assets. This portfolio is essential to support the Company commercialization strategy which focuses both on domestic U.S. channels as well as aesthetic channels in a variety of international markets." Dr. Capelli continued, "Additionally, clinical trials are under way to determine if our device may be effective at removing cellulite or accelerating current fat removal technologies."

About Soliton, Inc.

Soliton, Inc. is a medical device company with a novel and proprietary platform technology licensed from MD Anderson. The Company's first planned commercial product is designed to use rapid pulses of designed acoustic shockwaves in conjunction with existing lasers to reduce the number of treatment visits to remove unwanted tattoos (RAP device). In addition, higher energy versions of acoustic pulse devices are in early stages of development for potential stand-alone treatment of cellulite and other indications. Both products are investigational and are not available for sale in the United States.
