

### Company Overview

CytoDyn is a publicly traded late stage biotechnology company developing innovative treatments for multiple therapeutic indications based on Leronlimab, a novel humanized monoclonal antibody targeting the CCR5 receptor. CCR5 appears to play a key role in the ability of HIV to enter and infect healthy T-cells. The CCR5 receptor also appears to be implicated in tumor metastasis and in immune-mediated illnesses, such as graft-vs-host disease (GvHD) and NASH.
