Midwest Energy Emissions Delivers Total Mercury Control With Its New Mobile Emissions Analysis Lab

LEWIS CENTER, OH / ACCESSWIRE / April 2, 2015 / Midwest Energy Emissions Corp. (OTCQB:MEEC) ("ME2C"), a leader in mercury emissions control for coal-fired power plants, announces today that it has completed the field-testing and commercial launch of its proprietary Mobile Emissions-Analysis Lab. The Lab is part of ME2C's Emissions Services line, focused on delivering the most comprehensive, holistic suite of mercury emissions solutions to coal power utilities.

President and CEO Richard MacPherson stated, "One of the common traits of great technology companies is the ability and dedication to innovate, in order to offer customers cutting edge products and services. ME2C continues to invest heavily into research and development for our patented SEA Technology, working to broaden our patent-portfolio, while developing more robust and effective products. Key to this all is delivering customer service that greatly reduces a customer's risk of achieving compliance with mercury emissions regulations. The Emissions Services component of our mercury control program now combines our exceptional team of experts in emissions control, and mercury measurement and analysis, with the most modern system available for on-site mercury emissions analysis."

Chief Technical Officer John Pavlish commented "Our Mobile Emissions-Analysis Lab now allows ME2C to bring our expertise right to the power plant, in real-time, where we are able to fully fuse our science and engineering approach to mercury emissions control. By gathering on-site mercury measurements, we can quickly adapt to different plant configurations and coal types, better understanding plant-specific operations, while providing critical oversight to the power plant's own testing equipment, ensuring maximum test and measure efficacy. We are also able to measure and monitor other gas components, including CO₂, CO, SO₂, O₂, NO_x, as well as our own product observations, allowing us to provide advanced customized and optimized products and solutions, while also staying on top of an increasingly regulated emissions environment for our customer."

Midwest Energy Emissions Corp. develops and employs patented and proprietary technologies to remove mercury from coal-power plant emissions. The U.S. Environmental Protection Agency's (EPA) Mercury and Air Toxic Standards (MATS) rule requires that all coal and oil-fired power plants in the U.S., larger than 25 mega-watts, must remove roughly 90% of mercury from their emissions. ME2C employs patented technology that has been shown to achieve mercury removal levels compliant with MATS at a significantly lower cost and with less operational impact than currently used methods, while preserving the ability for customers to recycle and sell fly-ash for beneficial use.

Safe Harbor Statement?: With the exception of historical information contained in this press release, content herein may contain "forward looking statements" that are made pursuant to the Safe Harbor Provisions of the Private Securities Litigation Reform Act of 1995. These statements are based on management's current expectations and are subject to uncertainty and changes in circumstances. Investors are cautioned that forward looking statements involve risks and uncertainties that could cause actual results to differ materially from the statements made. Matters that may cause actual results to differ materially from those in the forward-looking statements include, among other factors, the gain or loss of a major customer, additional or new EPA regulations affecting coal-burning utilities, disruption in supply of materials, a significant change in general economic conditions in any of the regions where our customer utilities might experience significant changes in electric demand, a significant disruption in the supply of coal to our customer units, the loss of key management personnel, failure to obtain adequate working capital to execute the business plan and any major litigation regarding the Company. In addition, this release contains time-sensitive information that reflects management's best analysis only as of the date of this release. The Company does not undertake any obligation to publicly update or revise any forward-looking statements to reflect future events, information or circumstances that arise after the date of this release. Further information concerning issues that could materially affect financial performance related to forward-looking statements contained in this release can be found in the Company's periodic filings with the Securities and Exchange Commission.
