Akoustis Locks Design for Citizen's Broadband Radio Service 5G Infrastructure Filter

– Filter Sampling Expanded from One to Three Potential Customers in Q4 CY2019 –

– Akoustis Targeting Commercial Production in the 2H CY2020 –

– Company Expects Accelerated Demand with Upcoming FCC Priority Access License (PAL) Auctions –

Charlotte, N.C., Jan. 30, 2020 (GLOBE NEWSWIRE) **--** Akoustis Technologies, Inc. (NASDAQ: AKTS) ("Akoustis" or the "Company"), an integrated device manufacturer (IDM) of patented bulk acoustic wave (BAW) high-band RF filters for mobile and other wireless applications, announced today it has completed development and locked design of its first 3.6 GHz Citizen's Broadband Radio Service (CBRS) infrastructure filter.

The CBRS band consists of 150 MHz shared spectrum covering 3.55 GHz to 3.7 GHz that has been earmarked for access by the FCC. The Priority Access Licenses ("PALs") make up the second tier of the three-tiered CBRS spectrum sharing framework at 3.5 GHz and will offer wireless service providers new spectrum to start and/or supplement existing sub-6 GHz 5G mobile networks.

With the FCC PALs auction scheduled to begin in June 2020, Akoustis is experiencing greater demand for CBRS filter samples from multiple potential customers, including network infrastructure companies as well as mobile device OEMs. In December, the Company sampled filters to three potential customers and expects that number to double over the course of calendar 2020.

Jeff Shealy, Founder and CEO of Akoustis, stated, "The CBRS filter market is an important segment of 5G infrastructure, which we expect will be meaningful over the next several years. Given the current lack of micro filter solutions that can target this high frequency spectrum, CBRS represents another new first-to-market, greenfield RF filter opportunity for Akoustis using its proprietary and patented XBAW™ technology. We are ideally positioned to take a leadership position delivering high performance BAW filter solutions to this new market."

The CBRS bands will enable existing carriers to provide last-mile data service and augment individual networks. In addition, they will enable the delivery of campus-wide communications and create secure IoT networks.

The CBRS network infrastructure filters are designed and manufactured using the

Company's patented XBAW process and manufactured in the Company's Si-MEMS Wafer Fab located in Canandaigua, NY. Akoustis has introduced several new filters over the past twelve months including a 5.6 GHz WiFi filter, a 5.2 GHz WiFi filter, a 4.9 GHz band n79 filter for small cell network infrastructure, a 3.8 GHz filter and five S-Band filters for defense phased-array radar applications, a 3.6 GHz filter for the CBRS infrastructure market and band 25 downlink and uplink filters for LTE infrastructure. The Company is also developing several new filters for the sub-7 GHz bands targeting 5G mobile device, network infrastructure, WiFi CPE and defense markets.

About Akoustis Technologies, Inc.

Akoustis® (www.akoustis.com) is a high-tech BAW RF filter solutions company that is pioneering next-generation materials science and MEMS wafer manufacturing to address the market requirements for improved RF filters - targeting higher bandwidth, higher operating frequencies and higher output power compared to incumbent polycrystalline BAW technology deployed today. The Company utilizes its proprietary XBAW manufacturing process to produce bulk acoustic wave RF filters for mobile and other wireless markets, which facilitate signal acquisition and accelerate band performance between the antenna and digital back end. Superior performance is driven by the significant advances of high-purity, single-crystal and associated piezoelectric materials and the resonator-filter process technology which drives electro-mechanical coupling and translates to wide filter bandwidth.

Akoustis plans to service the fast growing multi-billion-dollar RF filter market using its integrated device manufacturer (IDM) business model. The Company owns and operates a 120,000 sq. ft. ISO-9001:2015 certified commercial wafer-manufacturing facility located in Canandaigua, NY, which includes a class 100 / class 1000 cleanroom facility - tooled for 150-mm diameter wafers - for the design, development, fabrication and packaging of RF filters, MEMS and other semiconductor devices. Akoustis Technologies, Inc. is headquartered in the Piedmont technology corridor near Charlotte, North Carolina.

Forward-Looking Statements

This document includes "forward-looking statements" within the meaning of Section 27A of the Securities Act, and Section 21E of the Securities Exchange Act of 1934, as amended, that are intended to be covered by the "safe harbor" created by those sections. These forward-looking statements include, but are not limited to, statements about our estimates, expectations, beliefs, intentions, plans or strategies for the future (including our possible future results of operations, business strategies, competitive position, potential growth opportunities, potential market opportunities and the effects of competition), and the assumptions underlying such statements. Forward-looking statements include all statements that are not historical facts and typically are identified by use of terms such as "may," "will," "should," "could," "expect," "plan," "anticipate," "believe," "estimate," "predict," "intend," "forecast," "seek," "potential," "continue" and similar words, although some forward-looking statements are expressed differently. Forward-looking statements are neither historical facts nor assurances of future performance. Instead, these forward-looking statements are based on management's current beliefs, expectations and assumptions and are subject to risks and uncertainties. Factors that could cause actual results to differ materially from those currently anticipated include, without limitation, risks relating to the results of our research and development activities, including uncertainties relating to semiconductor process

manufacturing; the development of our XBAW™ technology and products presently under development and the anticipated timing of such development; our ability to protect our intellectual property rights that are valuable to our business, including patent and other intellectual property rights; our ability to successfully manufacture, market and sell products based on our technologies; the ability to achieve qualification of our products for commercial manufacturing in a timely manner and the size and growth of the potential markets for any products so qualified; the rate and degree of market acceptance of any of our products; our ability to achieve design wins from current and future customers; our ability to raise funding to support operations and the continued development and qualification of our products and the technologies underlying them; and our ability to service our outstanding indebtedness. These and other risks and uncertainties are described in more detail in the Risk Factors and Management's Discussion and Analysis of Financial Condition and Results of Operations sections of the Company's most recent Annual Report on Form 10-K and in subsequently filed Quarterly Reports on Form 10-Q. Considering these risks, uncertainties and assumptions, the forward-looking statements regarding future events and circumstances discussed in this document may not occur, and actual results could differ materially and adversely from those anticipated or implied in the forward-looking statements. You should not rely upon forward-looking statements as predictions of future events. The forward-looking statements included in this document speak only as of the date hereof and, except as required by law, we undertake no obligation to update publicly or privately any forward-looking statements, whether written or oral, for any reason after the date of this document to conform these statements to new information, actual results or to changes in our expectations.
