Anixa Biosciences to Present at the H.C. Wainwright 28th Annual Global Investment Conference

Ovarian cancer CAR-T therapy, lira-cel, advances to highest dose level to date in fifth cohort with lymphodepletion—four patients surpass one year of survival, longest at approximately 28 months

Breast cancer vaccine final Phase 1 data shows all primary endpoints were met and protocol-defined immune responses in 74% of participants—Phase 2 preparations ongoing

Presentation to highlight Anixa's clinical progress and collaborations with leading cancer research institutions—Moffitt Cancer Center and Cleveland Clinic

SAN JOSE, Calif., Aug. 18, 2026 /PRNewswire/ -- [Anixa Biosciences, Inc.](#) ("Anixa" or the "Company") (NASDAQ: ANIX), a biotechnology company focused on the treatment and prevention of cancer, today announced that management will participate in the H.C. Wainwright 28th Annual Global Investment Conference being held September 14 – 16, 2026.

Dr. Amit Kumar, Chairman and CEO of Anixa, will deliver a presentation that will be available to view beginning at 7:00 AM ET, Friday, September 11, 2026. Dr. Kumar's presentation will highlight Anixa's breast cancer vaccine, being developed in collaboration with Cleveland Clinic, which completed a Phase 1 clinical trial that was funded by the U.S. Department of Defense. The trial met all primary endpoints, including safety, and protocol-defined immune responses were generated in 74% of participants. Preparations are underway for a Phase 2 trial.

Dr. Kumar will also discuss Anixa's ovarian cancer CAR-T therapy, liraltagene-autoleucel, or lira-cel, which is being evaluated in an ongoing Phase 1 clinical trial in collaboration with Moffitt Cancer Center. Participants in this trial are highly pre-treated, recurrent and resistant ovarian cancer patients, who have failed conventional therapies and are progressing. In the lira-cel trial, dosing has advanced to the fifth and highest cohort evaluated to date, which incorporates lymphodepletion for the first time. No dose-limiting toxicities have been observed in the study to date, and four patients have surpassed one year of survival following treatment, with the longest at approximately 28 months.

"This is an exciting time for Anixa, with our ovarian cancer CAR-T program now dosing at the highest level evaluated in the trial and our breast cancer vaccine advancing toward Phase 2," said Dr. Kumar. "We look forward to sharing our progress in the coming weeks."

Details to view the presentation are as follows:

Event: H.C. Wainwright 28th Annual Global Investment Conference

Date & time: Beginning at 7:00 AM ET, September 11, 2026, and will remain available for 90 days

Webcast: <https://journey.ct.events/view/95700413-04bd-4a6f-b873-84a7fe7aeb5e>

Management will be available for one-on-one meetings during the conference.

About Anixa Biosciences, Inc.

Anixa is a clinical-stage biotechnology company focused on the treatment and prevention of cancer. Anixa's therapeutic portfolio consists of liraltagene autoleucel, or lira-cel, an ovarian cancer immunotherapy being developed in collaboration with Moffitt Cancer Center, which uses a novel type of CAR-T, known as chimeric endocrine receptor-T cell (CER-T) technology. This technology is differentiated from other cell therapies as the natural ligand of the FSHR receptor, FSH, binds to the FSHR receptor on the tumor cell instead of an antibody fragment. Moffitt is a world leader in cancer immunotherapy treatments, pioneering next-generation cell therapies such as CAR-T, and tumor infiltrating lymphocytes (TILs) to harness the power of the immune system. The Company's vaccine portfolio includes vaccines being developed in collaboration with Cleveland Clinic to treat and prevent breast cancer and ovarian cancer, as well as additional cancer vaccines to address many intractable cancers, including high incidence malignancies in lung, colon, and prostate. These vaccine technologies focus on immunizing against "retired" proteins that have been found to be expressed in certain forms of cancer. The breast and ovarian cancer vaccines were developed at Cleveland Clinic and exclusively licensed to Anixa. Cleveland Clinic is entitled to royalties and other commercialization revenues from the Company related to these vaccine technologies. Anixa's unique business model of partnering with world-renowned research institutions on all stages of development allows the Company to continually examine emerging technologies in complementary fields for further development and commercialization.
