

IMV is a clinical-stage biopharmaceutical company pioneering a novel class of cancer immunotherapies and vaccines against infectious diseases (RSV, COVID-19). IMV is leveraging its unique delivery platform (DPX) that programs immune cells directly within the human body to produce rapid, robust, and sustained target killing capabilities. IMV's lead drug candidate, DPX-Survivac, is a targeted T cell therapy that has completed multiple Phase 1 and 1b trials generating best-in-class results in ovarian cancer and DLBCL (Diffuse Large B Cell Lymphoma). It is evaluated in multiple Phase 2 clinical trials across six indications and also in combination with Merck's Keytruda® in two clinical trials. IMV has the potential to make history and successfully develop the first effective in vivo T cell therapy for cancer.

IMV is also advancing the development of a **DPX-based vaccine candidate against COVID-19** in collaboration with infectious disease experts. Clinical trials in humans are scheduled to start during summer 2020.

MARKET SNAPSHOT (May 29, 2020)

Nasdaq / TSX symbol	IMV
Nasdaq / TSX Price	\$US 2.95; \$CAD 4.07
52 Week Range TSX	\$CAD 1.98 - \$CAD 6.69
52 Week Range Nasdaq	\$US 1.35 - \$US 5.12
Market Cap	\$US 178M - \$CAD 246M
O/S shares	60.4 M FD: 65.5 M
Avg Vol. (30 trading days)	Nasdaq & TSX ~585 k
Cash sources (03/31/20)	\$CAD 10.0 M
Pro-forma *	\$CAD 35.1 M

* Pro-forma the private placement completed 05/07/20 for gross proceeds of \$CAD 25.1 M

INVESTMENT HIGHLIGHTS

Broadly applicable Proprietary DPX Delivery Platform

- Clinically demonstrated activity: tumor regressions in solid and hematologic hard-to-treat cancer tumors
- Unique 'no-release' mechanism of action that generates specific targeted immune cells

Focused on unmet medical needs in oncology

- Focusing on unmet medical needs in oncology and pursuing two hard-to-treat cancers as fast-to-market indications

Also targeting COVID-19 and other infectious diseases

- Positive pre-clinical results allowed the selection of a vaccine candidate. Human trials will be initiated this summer.
- Experienced in vaccine development (RSV, Ebola, Malaria, Zika, ...)
- Targeted vaccines: RSV and SARS-CoV-2 (COVID-19)
- DPX-COVID-19 has a unique approach that reduces the risk of immune escape even in the case of a virus mutation

PIPELINE

	Product (target)	Indication	Preclinical	Phase 1	Phase 2	Phase 3	Sponsor	Collaborators
Immunotherapies	DPX-Survivac/CPA (Survivin)	Ovarian	▶				IMV™	
		DLBCL	▶				Sunnybrook RESEARCH INSTITUTE	MERCK
		Basket Trial: Lung (NSCLC), Bladder, Liver, Ovarian, MSI-H	▶				IMV™	MERCK
	DPX-SurMAGE /CPA (Survivin + MAGE A9)	Bladder	▶				IMV™	CHU de Quebec Universit� Laval
	DPX-BRAF/CPA (BRAF)	Melanoma	▶				IMV™	THE WISTAR INSTITUTE
Vaccines	DPX-RSV (SheA)	Respiratory Syncytial Virus (RSV)	▶				IMV™	CIRN
	DPX-COVID-19 (Spike)	COVID-19	▶				IMV™	CIRN

LEAD CANDIDATE: DPX-SURVIVAC

Expression level of survivin

By type of cancer cells

Cancer	Survivin %
Ovarian	90
Breast	90
Melanoma	90
Lung	53
Colorectal	54
Gastric	94
Kidney	23-82
Glioblastoma	80
ALL	70
CML	70
MDS	90
DLBCL	60

- ✓ Targets survivin, a protein that is over-expressed in cancer cells (see table) and virtually undetectable in fully differentiated and healthy adult tissues.
- ✓ Has completed multiple Phase 1 and 1b trials in ovarian cancer and DLBCL.
- ✓ Currently evaluated in multiple clinical trials across 6 indications (see pipeline) with oral intermittent cyclophosphamide (CPA) and in combination with Merck's Keytruda®.
- ✓ DPX-Survivac/CPA shows a good safety profile in all clinical trials (mostly grade 1-2 events). Benefits are observed with a very favorable toxicity profile observed in a heterogeneous population of patients including older patients with comorbidities.

• RELAPSED-REFRACTORY DLBCL – Clinical Results to Date (May 2020)

- ✓ Primary endpoint was met in May 2020, with 64% or (7/11) of evaluable patients demonstrating a clinical response
- ✓ Investigator-sponsored Phase 2
- ✓ r/r DLBCL (n=up to 25)
- ✓ 20 patients enrolled so far across 5 sites
- ✓ DPX-Survivac and oral intermittent low dose cyclophosphamide (or CPA that acts as an **immune modulator**) in combination with pembrolizumab (Keytruda®)
- ✓ Top line data is expected to be presented at a conference later in 2020

• RECURRENT OVARIAN CANCER – Clinical Results (May 2020)

- ✓ DPX-Survivac and oral intermittent low dose cyclophosphamide (or CPA that acts as an immune modulator) with no combination
- ✓ **26%** Partial Responses on target lesions so far (5-19)
- ✓ **37%** Clinical benefits - PR or Stable Disease > 6 months (7/19)
- ✓ **79%** Disease Control Rate (15/19)
- ✓ **53%** Tumor regressions (10/19)

COVID-19 VACCINE - Initiatives

- ✓ The selection of a combination of peptides that have demonstrated immunogenicity is completed. They will target several areas of the virus mechanism of entry in a non-overlapping fashion. IMV believes this unique approach will reduce the potential for immune escape, even in the case of a mutation
- ✓ IMV's DPX platform can activate the immune system against serious diseases beyond cancer and IMV has been working with partners for years to develop a clinical asset pipeline outside of oncology
- ✓ A pre-clinical trial application meeting (CTA) was held with Health Canada. The design of a Phase 1 clinical trial in humans is being finalised. The randomized, placebo-controlled study will enroll approximately 84 healthy subjects in two age strata and will assess two different doses of DPX-COVID-19
- ✓ IMV has submitted grant applications to relevant authorities, will be publishing results of its preclinical studies in a peer-reviewed scientific journal and the first patients should receive DPX-COVID-19 in the summer of 2020

KEY UPCOMING MILESTONES

- ✓ Initiation of Phase 1 clinical trial for DPX-COVID-19 during the summer of 2020
- ✓ Top line Phase 2 clinical results update in the DLBCL combination trial in H2 2020
- ✓ Updated Phase 2 clinical results for Basket trial in H2 2020

This document contains forward-looking information under applicable securities law. All information that addresses activities or developments that we expect to occur in the future is forward-looking information. Forward-looking statements are based on the estimates and opinions of management on the date the statements are made. Such forward-looking statements include, but are not limited to, statements regarding the Company's intention to develop a DPX-based vaccine candidate against COVID-19, the Company's belief that the DPX-based platform creates the opportunity for accelerated development and rapid, large-scale production of a COVID-19 vaccine, the Company's belief in the potential efficacy of its DPX-based vaccine candidate against COVID-19, the Company's belief in the benefits of the third-party research and studies in related coronavirus and SARS studies and third-party sequencing data and their applicability to the Company's DPX platform and a DPX platform related vaccine and the Company's anticipated results from its DPX cancer and infectious disease studies. No responsibility to update forward-looking statements in this press release except as required by law. These forward-looking statements involve known and unknown risks. Such statements should not be regarded as a redocument that any of the plans will be achieved. Actual results may differ materially from those set forth in this document due to risks and uncertainties affecting the Company and its products. The Company assumes no responsibility to update forward-looking statements in this press release except as required by law. These forward-looking statements involve known and unknown risks and uncertainties and those risks and uncertainties include, but are not limited to the Company's ability to develop a DPX-based vaccine candidate against COVID-19 through the successful and timely completion of clinical trials and studies, the receipt of all regulatory approvals by the Company to commence and then continue clinical studies, and, if successful, the commercialization of its proposed vaccine candidate related to COVID-19, the Company's ability to raise sufficient capital to fund such clinical trials and studies and the production of any COVID-19 vaccine, the ultimate applicability of any third-party research and studies in related coronavirus and SARS studies and sequencing, the Company's ability to enter into agreements with the proposed lead investigators to assist in the clinical development on its vaccine candidate related to COVID-19, the Company's ability to collaborate with governmental authorities with respect to such clinical development, the coverage and applicability of the Company's intellectual property rights to any vaccine candidate related to COVID-19, the ability of the Company to manufacture any vaccine candidate related to COVID-19 rapidly and at scale and other risks detailed from time to time in the Company's ongoing filings and in its annual information form filed with the Canadian regulatory authorities on SEDAR as www.sedar.com and with the United States Securities and Exchange Commission on EDGAR at www.sec.gov/edgar. Investors are cautioned not to rely on these forward-looking statements and are encouraged to read the Company's continuous disclosure documents which are available on SEDAR and on EDGAR.
