Anixa Biosciences Announces Notice of Allowance of Additional Patent on Breast Cancer Vaccine Technology

SAN JOSE, Calif., July 21, 2022 /PRNewswire/ -- [Anixa Biosciences, Inc.](https://www.anixabiosciences.com) (NASDAQ: ANIX) ("Anixa"), a biotechnology company focused on the treatment and prevention of cancer and infectious diseases, today announced that the U.S. Patent and Trademark Office (USPTO) has issued a Notice of Allowance broadening protection of Anixa's novel breast cancer vaccine technology, which has been exclusively licensed from, and is being developed in partnership with, Cleveland Clinic.

The patent is titled, "Breast Cancer Vaccine," and the lead inventor is Dr. Vincent Tuohy of the Department of Inflammation and Immunity at Cleveland Clinic's Lerner Research Institute. This patent is in the family of the originally granted patent, and it covers additional intellectual property related to Anixa's breast cancer vaccine technology.

"We are pleased to receive this notice of allowance from the USPTO, confirming additional protection of the breast cancer vaccine technology," stated Dr. Amit Kumar, Chairman and CEO of Anixa. "This breast cancer vaccine has the potential to prevent Triple Negative Breast Cancer ("TNBC"), the deadliest form of breast cancer, and perhaps other forms of breast cancer that express alpha-lactalbumin. With our partners at Cleveland Clinic, we are currently performing clinical testing of this vaccine, and hope to have preliminary results by year end."

About Triple-Negative Breast Cancer

One in eight women in the U.S. will be diagnosed with an invasive breast cancer at some point in their lives. Approximately 10-15% of those diagnoses are TNBC, however TNBC accounts for a disproportionately higher percentage of breast cancer deaths and has a higher rate of recurrence. This form of breast cancer is twice as likely to occur in African-American women, and approximately 70% to 80% of the breast tumors that occur in women with mutations in the BRCA1 genes are triple-negative breast cancer.

About Anixa Bioscience's Breast Cancer Vaccine

Anixa's investigational vaccine, currently in Phase 1 trials, takes advantage of endogenously produced proteins that have a function at certain times in life, but then become "retired" and disappear from the body. One such protein is a breast-specific lactation protein, α -lactalbumin, which is no longer found post-lactation in normal, aging tissues, but is present in the majority of triple-negative breast cancers. Activating the immune system against this "retired" protein provides preemptive immune protection against emerging breast tumors that express α -lactalbumin. The vaccine also contains an adjuvant that activates an innate immune response, which allows the immune system to mount a response against emerging tumors to prevent them from growing.

About Anixa Biosciences, Inc.

Anixa is a clinical-stage biotechnology company with a number of programs addressing cancer and infectious disease. Anixa's portfolio of therapeutics includes a cancer immunotherapy program being developed in collaboration with Moffitt Cancer Center, which uses a novel type of CAR-T, known as chimeric endocrine receptor T-cell (CER-T) technology, and, with partner MolGenie GmbH, a COVID-19 program focused on compounds targeting the M^{Pro} enzyme of SARS-CoV-2, which is largely conserved across all recently identified variants. The company's vaccine portfolio includes a novel vaccine being developed in collaboration with Cleveland Clinic to prevent breast cancer – specifically triple negative breast cancer (TNBC), the most lethal form of the disease – as well as a vaccine to prevent ovarian cancer. These vaccine technologies focus on immunizing against "retired" proteins that have been found to be expressed in certain forms of cancer. Anixa's unique business model of partnering with world-renowned research institutions on clinical development allows the company to continually examine emerging technologies in complementary fields for further development and commercialization.
