About Global Clean Energy

Global Clean Energy Holdings, Inc. (OTCQB: GCEH) is a vertically integrated renewable fuels business that is focused on reducing carbon emissions sustainably through our proprietary nonfood camelina varieties – delivering among the lowest carbon intensity renewable fuel in the marketplace. GCEH's strategy since its inception has been to control the full integration of the renewable fuels supply chain from science to seed and farm to fuel. We aim to operate the development, production, processing, and transportation of feedstocks to the refining and production of renewable fuels. We process our proprietary nonfood camelina feedstock in our Bakersfield, California renewable fuels refinery, yielding a renewable diesel that is chemically identical to petroleum diesel, but with 80+ percent lower carbon emissions. Our proprietary camelina varieties are the only nonfood renewable feedstock on the market certified for both the U.S. EPA's Renewable Fuel Standard and California's Low Carbon Fuel Standard. More information can be found at www.gceholdings.com.
