STUDY INTRODUCTION

Sepsis is life-threatening organ dysfunction due to a dysregulated host response to infection and is an important global health problem. In the USA, for example, sepsis is the most common cause of in-hospital deaths and costs more than US\$24 billion annually.

The study was funded The Bill & Melinda Gates Foundation, the National Institutes of Health, the University of Pittsburgh, the British Columbia Children's Hospital Foundation, the Wellcome Trust, and the Fleming Fund.

SUMMARY OF STUDY FINDINGS

- Sepsis is the leading cause of hospital deaths.
- Globally, 20% of all deaths are sepsis related.
- Sepsis accounts for more deaths than all forms of cancer combined.
- In 2017, there were 48.9 million cases of sepsis and 11 million deaths.
- In 2017, 20.3 million sepsis cases and 2.9 million deaths were among children younger than five years old.
- Sepsis is the most expensive health care problem in the U.S., accounting for more than \$24 billion in annual costs.
