Inpixon Expanding Offering of Canon USA's RadPRO SecurPASS Security Screening System

PALO ALTO, Calif.--(BUSINESS WIRE)-- [Inpixon](#) (NASDAQ: INPX), a leading indoor positioning and data analytics company, today announced that subsidiary, [Inpixon Federal](#), is partnering with Virtual Imaging, Inc., a wholly owned subsidiary of [Canon U.S.A.](#), Inc., to improve the safety and security of federal, state and local government correctional facilities.

Together, Inpixon Federal and Virtual Imaging, Inc. have delivered over 100 RadPRO SecurPASS Security Screening Systems across the nation's correctional facilities. The SecurPASS Whole-Body Scanners feature the most technologically advanced full body images available and can detect all metallic, non-metallic, organic or inorganic contraband found in any body cavity. The scanners ensure correctional officers can safely and easily find weapons and other contraband including cell phones and illegal and prescription drugs that inmates might be carrying.

Inpixon Federal continues to fulfill orders as they are being issued and anticipate over \$5.5M in revenue by the end of the 2017.

"The SecurPASS system is critical to the safety of correctional facilities across the nation," said Zaman Khan, President of Inpixon Federal. "This solution works well with Inpixon's Indoor Positioning Analytics (IPA) as a layered approach to controlling contraband. Inpixon received an order for its IPA product as a pilot to detect mobile devices including cellular phones and portable electronic devices that have already made their way into inmate facilities as illegal contrabands. Our IPA product will provide an added layer of protection and better protect the health and safety of staff and inmates."

Inpixon Federal also holds several other federal contract vehicles including GSA IT Schedule 70, NITAAC CIO-CS, NASA SEWP V, FBI ITAP, Army ADMC-2, and a subcontract on the Army's EITS.

About Inpixon

Inpixon (NASDAQ: INPX) is a leader in Indoor Positioning and Data Analytics. Inpixon sensors are designed to find all accessible cellular, Wi-Fi, and Bluetooth devices anonymously. Paired with a high performance, data analytics platform this technology delivers visibility, security, and business intelligence on any commercial or government premises world-wide.
