Inpixon Releases Update to Wireless Device Detection Solution for Security-Conscious Facilities

PALO ALTO, Calif. and TORONTO, Mar. 30, 2020 /PRNewswire/ -- Inpixon (Nasdaq: INPX), a leading indoor data company that specializes in delivering indoor intelligence, announced today the availability of ZoneDefense 5.16, the latest version of the company's [wireless detection and positioning solution](#). ZoneDefense software works in conjunction with Inpixon Sensor 4000 to increase security, decrease enforcement personnel requirements, and thwart attempted theft of intellectual property.

With this version, the company continues its commitment to innovation by extending the solution's scalability and improving the user experience for administrators. It also makes available additional diagnostic tools including reports showing sensor time sync status, database metrics, filehandle usage and more.

Inpixon's wireless device detection solution provides situational awareness of nearly all active wireless devices in the monitored environment. The technology locates rogue devices, such as unauthorized access points and eavesdropping equipment, and it enables the enforcement of no-phone zones. Further, when used in conjunction with a mobile device management system (MDM), ZoneDefense can trigger the MDM to push more restrictive phone security policies (e.g., disable audio and video recording and wireless transmissions) when phones enter high security areas, and then lift such restrictions when the phone leaves the geofenced zone.

ZoneDefense and the Sensor 4000 are especially well-suited for security conscious facilities including government, healthcare, critical infrastructure, transportation, banking and financial institutions, and corporate enterprises. The solution can be used to secure areas such as board rooms, data centers, security and operations command and control centers, merger and acquisition deal rooms, stock exchange trading floors, and more.

"Inpixon is a pioneer in the wireless detection and indoor positioning market," noted Adam Benson, CTO of Inpixon. "We're still one of very few products on the market that can detect and position not only Wi-Fi and Bluetooth devices, but also cellular. With this latest release, we continue our history of delivering innovative solutions to address the ever evolving threat landscape."

The new features and enhancements are live and available in the latest version of Inpixon's wireless detection and positioning solution. For additional information about this release, please [contact Inpixon](#).

About Inpixon

Inpixon® (Nasdaq: INPX) is an indoor intelligence company that specializes in capturing, interpreting and giving context to indoor data so it can be translated into actionable intelligence. The company's indoor location and data platform ingests diverse data from IoT, third-party and proprietary sensors designed to detect and position all active cellular, Wi-Fi, UWB and Bluetooth devices, and uses a proprietary process that ensures anonymity. Paired with a high-performance data analytics engine, patented algorithms, and advanced mapping technology, Inpixon's solutions are leveraged by a multitude of industries to do good with indoor data. This multidisciplinary depiction of indoor data enables users to increase revenue, decrease costs, and enhance safety. Inpixon customers can boldly take advantage of location awareness, analytics, sensor fusion and the Internet of Things (IoT) to uncover the untold stories of the indoors. Safe Harbor Statement

All statements in this release that are not based on historical fact are "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995 and the provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. While management has based any forward-looking statements included in this release on its current expectations, the information on which such expectations were based may change. These forward-looking statements rely on a number of assumptions concerning future events and are subject to a number of risks, uncertainties and other factors, many of which are outside of the control of Inpixon and its subsidiaries, which could cause actual results to materially differ from such statements. Such risks, uncertainties, and other factors include, but are not limited to, the fluctuation of economic conditions, the performance of management and employees, Inpixon's ability to maintain compliance with Nasdaq's minimum bid price requirement and other continued listing requirements, including during a panel monitoring period ending on February 5, 2021, the ability to obtain financing, competition, general economic conditions and other factors that are detailed in Inpixon's periodic and current reports available for review at sec.gov. Furthermore, Inpixon operates in a highly competitive and rapidly changing environment where new and unanticipated risks may arise. Accordingly, investors should not place any reliance on forward-looking statements as a prediction of actual results. Inpixon disclaims any intention to, and undertakes no obligation to, update or revise forward-looking statements.
