Pershing Resources Company Completes Extraction Testing Program

The Company Confirms Commercial Recovery Rates in Lab Scale Testing on Ore From the Marco Project and Begins Work on a Pilot Mill

RENO, NV -- (Marketwired) -- 04/13/15 -- Pershing Resources Company(OTC PINK: PSGR) announced that it has completed an extraction and recovery testing program on ore from its Marco Project Claims in Northern Nevada. The extraction and recovery testing program was conducted by Simple Recovery Inc. and Copper State Analytical Laboratories in Prescott, Arizona. Lab testing yielded an average recovery rate of 0.416 ounces, (11.79 grams), of precious metals per ton of leached and heat processed ore. CSAL ran a number of tests on each sample to confirm recovery rates using different methods. The work took several months and was done to establish the most effective extraction process to incorporate into a mill circuit. Data regarding head ore assay values and extraction test results will be posted in coming weeks on the Company's website.

Steve Plumb, Pershing Resources' CEO, stated, "The results from the lab further validate our head ore assays and we can now say that the Marco Project has strong potential as a commercial mining operation. The work performed for the Company by Simple Recovery and CSAL has yielded several processes to work with. We now have a preliminary production flow sheet and we have begun to acquire and assemble equipment for a pilot mill, on which, we will work to refine our costs and scale our production process.

Mr. Plumb added, "We have now completed of Stage 1 of our initiative to get the Marco Project into production. It is important to note that the pace of our progress has been steady and based on solid data. We remain confident in our course and, focused on our efforts as we move on to Stage 2."

About Pershing Resources Company

Pershing Resources Company is a development stage exploration and mining company, focused on precious metal ores and mining projects located in Nevada. Based in Reno, Nevada, the Company's overall strategy is built around two basic components. The first component involves the acquisition of US domestic properties near mines with historical precious metals production. The second component is the development of projects with high tonnage and commercially viable grades of precious metals with proximity to historical occurrences. This two tier strategy supports the company's short and long term goals of profitability and growing shareholder value through expansion.

Supplemental to our overall strategy and to achieve our goals, the Company is focused on five key attributes. Those being, quality growth, low cash costs, cost management, establishing and maintaining a strong balance sheet, and conducting business in a responsible manner.

The Company's current assets are comprised of 55 mining claims on a site totaling 1100 acres near Lovelock, Nevada. These claims are well documented and have been explored and assayed extensively. The Company is presently in the planning and pre-production stage on this property. Pershing Resources is committed to responsible mining practices and, is well positioned to deliver sustained growth and performance for years to come.
