Samsung and Airgain Deliver Superior Connectivity for North American Cable Operator

Airgain high performance embedded antenna system provides class-leading performance

SAN DIEGO--(BUSINESS WIRE)-- [Airgain, Inc. \(NASDAQ: AIRG\)](#), a leading provider of advanced antenna technologies used to enable high performance wireless networking across a broad range of devices and markets, including connected home, enterprise, automotive, and Internet of Things (IoT), today announced it was chosen by Samsung Electronics Co Ltd., to provide embedded antenna technology for Samsung's next generation GX-MC990CL router. The new router has been showing its capabilities during field trials and initial customer roll-outs with a large North American cable operator, with resulting high levels of user satisfaction.

Samsung's DOCSIS 3.1 capable GX-MC990CL router utilizes an advanced embedded antenna solution, supporting dual band, 4x4 5GHz multiuser Multiple-Input, Multiple-Output (MU-MiMo) and 3x3 2.4GHz MiMo Wi-Fi. Airgain's antenna design allows the GX-MC990CL to achieve powerful throughput and coverage while maintaining a small, sophisticated form factor.

"After evaluating other options, we selected Airgain as our antenna design partner because of the Airgain team's ability to deliver optimal real-world performance within tight design parameters," said Bright Seo, Director of R&D at Samsung Electronics. "Consumers demand the very best from modern media and networking products, and meeting those demands is challenging due to the increasing complexity of the devices. However, with Airgain's contributions, the GX-MC990CL has proven able to achieve the superior performance needed."

"We are delighted to work with Samsung to help them deliver networking products to their customers that more than meet heightened consumer expectations," said Jacob Suen, Senior Vice President at Airgain. "The proliferation of radios combined with restricted space requirements seen in the latest routers create many challenges. However, our design, engineering, and test teams were able to work closely with Samsung to deliver an optimal design that has now proven itself in the field."

The collaboration with Samsung is another example of Airgain's ability to provide high performance solutions for products that rely on powerful connectivity. Airgain engineers and design specialists continue to work closely with major carriers, chipset suppliers, OEMs, and ODMs, ensuring that antenna design is closely integrated with complete product solutions, and high-performance connectivity is delivered regardless of the environment.

About Airgain, Inc.

Airgain is a leading provider of advanced antenna technologies used to enable high performance wireless networking across a broad range of devices and markets, including connected home, enterprise, automotive, and Internet of Things (IoT). Combining design-led thinking with testing and development, Airgain works in partnership with the entire ecosystem, including carriers, chipset suppliers, OEMs, and ODMs. Airgain's antennas are deployed in carrier, fleet, enterprise, residential, private, government, and public safety wireless networks and systems, including set-top boxes, access points, routers, modems, gateways, media adapters, portables, digital televisions, sensors, fleet, and asset tracking devices. Airgain is headquartered in San Diego, California, and maintains design and test centers in the U.S., U.K., and China. Forward-Looking Statements

Airgain cautions you that statements in this press release that are not a description of historical facts are forward-looking statements. These statements are based on the company's current beliefs and expectations. These forward-looking statements include statements regarding the capabilities of the new router and our ability to deliver optimal real-world performance within tight design parameters. The inclusion of forward-looking statements should not be regarded as a representation by Airgain that any of our plans will be achieved. Actual results may differ from those set forth in this press release due to the risk and uncertainties inherent in our business, including, without limitation: the market for our products is developing and may not develop as we expect; risks associated with the performance of our products; our products are subject to intense competition, and competitive pressures from existing and new companies may harm our business, sales, growth rates and market share; risks associated with quality and timing in manufacturing our products; and other risks described in our prior press releases and in our filings with the Securities and Exchange Commission, including under the heading "Risk Factors" in our Annual Report on Form 10-K and any subsequent filings with the SEC. You are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date hereof, and we undertake no obligation to revise or update this press release to reflect events or circumstances after the date hereof. All forward-looking statements are qualified in their entirety by this cautionary statement, which is made under the safe harbor provisions of the Private Securities Litigation Reform Act of 1995.
