Anixa Biosciences Receives Notice of Allowance from Chinese National Intellectual Property Administration for Patent Covering Breast Cancer Vaccine Technology

Notice of Allowance marks first Chinese patent to be issued on Anixa Breast Cancer Vaccine

Expands global intellectual property coverage in markets with high breast cancer incidence

New patent will provide IP protection of Breast Cancer Vaccine in China into at least the 2040s

SAN JOSE, Calif., Aug. 20, 2025 /PRNewswire/ -- [Anixa Biosciences, Inc.](#) ("Anixa" or the "Company") (NASDAQ: ANIX), a biotechnology company focused on the treatment and prevention of cancer, today announced that the Chinese National Intellectual Property Administration (CNIPA) has issued a Notice of Allowance for a new patent related to its breast cancer vaccine technology. This patent, exclusively licensed from Cleveland Clinic, will provide composition of matter protection for the Company's novel approach to breast cancer treatment and prevention in China.

With this allowance, Anixa continues to expand the international scope of its intellectual property portfolio, reinforcing its leadership in the field of cancer immunotherapy. The Chinese patent complements patents issued in the United States and other key global jurisdictions, and represents an important step toward future regulatory and commercial efforts outside the U.S.

"This newly allowed patent further illustrates the continued recognition of the novelty and potential of our breast cancer vaccine," stated Dr. Amit Kumar, Chairman and CEO of Anixa Biosciences. "As we continue advancing clinical development in the U.S., this allowance further strengthens our ability to pursue strategic global opportunities in regions with a high burden of breast cancer."

Breast cancer has become the most commonly diagnosed cancer among women in China, with incidence rising steadily over the past two decades and hundreds of thousands of new cases each year. As one of the world's largest and fastest-growing patient populations, addressing this challenge is a critical public health priority, requiring innovative preventative solutions such as Anixa's vaccine.

Anixa's vaccine is based on immunizing against human α -lactalbumin, a protein associated with lactation that is aberrantly expressed in certain types of breast cancer. This "retired" protein strategy, developed at Cleveland Clinic and licensed exclusively to Anixa, aims to selectively prime the immune system to prevent tumor formation while avoiding harm to normal tissue.

By reinforcing its global patent estate, Anixa is laying the groundwork for future international development and commercialization strategies. The Company's broader vaccine platform also targets other high-incidence cancers and is designed to transform how the medical community approaches cancer prevention.

About Anixa Biosciences, Inc.

Anixa is a clinical-stage biotechnology company focused on the treatment and prevention of cancer. Anixa's therapeutic portfolio consists of an ovarian cancer immunotherapy program being developed in collaboration with Moffitt Cancer Center, which uses a novel type of CAR-T, known as chimeric endocrine receptor-T cell (CER-T) technology. This technology is differentiated from other cell therapies as the natural ligand of the FSHR receptor, FSH, binds to the FSHR receptor on the tumor cell instead of an antibody fragment. Moffitt is a world leader in cancer immunotherapy treatments, pioneering next-generation cell therapies such as CAR-T, and tumor infiltrating lymphocytes (TILs) to harness the power of the immune system. The Company's vaccine portfolio includes vaccines being developed in collaboration with Cleveland Clinic to treat and prevent breast cancer and ovarian cancer, as well as additional cancer vaccines to address many intractable cancers, including high incidence malignancies in lung, colon, and prostate. These vaccine technologies focus on immunizing against "retired" proteins that have been found to be expressed in certain forms of cancer. The breast and ovarian cancer vaccines were developed at Cleveland Clinic and exclusively licensed to Anixa. Cleveland Clinic is entitled to royalties and other commercialization revenues from the Company related to these vaccine technologies. Anixa's unique business model of partnering with world-renowned research institutions on all stages of development allows the Company to continually examine emerging technologies in complementary fields for further development and commercialization.
