January 6, 2015

Titan Pharmaceuticals to Present at 8th Annual OneMedForum

SOUTH SAN FRANCISCO, CA -- (Marketwired) -- 01/06/15 -- Titan Pharmaceuticals, Inc. (OTCBB: TTNP), a specialty pharmaceutical company developing proprietary therapeutics for the treatment of select chronic diseases utilizing its ProNeura™ long-term drug delivery technology, announced today that its President, Sunil Bhonsle, will present at the 8th annual OneMedForum taking place on January 12-13, 2015 in San Francisco. The presentation is scheduled for Jan. 12 at 11 a.m. in the Public Company Track Room, Marriott Marquis, San Francisco, California.

Mr. Bhonsle will review progress of the Phase 3 development program for Probuphine® for the maintenance treatment of opioid dependence and the potential re-submission of the Probuphine New Drug Application (NDA) this year. He will also provide an overview of the company's ProNeura for Parkinson's disease program and other key company milestones for 2015. OneMedForum brings together more than 100 emerging growth companies and more than 1,300 investors in the health care sector at this annual conference.

About Titan Pharmaceuticals

Titan Pharmaceuticals Inc. (OTCBB: TTNP), based in South San Francisco, CA, is a specialty pharmaceutical company developing proprietary therapeutics primarily for the treatment of serious medical disorders. The company's lead product candidate is Probuphine®, a novel and long-acting formulation of buprenorphine for the long-term maintenance treatment of opioid dependence. Probuphine employs Titan's proprietary drug delivery system ProNeura™, which is capable of delivering sustained, consistent levels of medication for six months or longer. Titan has granted North American commercial rights for Probuphine to Braeburn Pharmaceuticals. If approved, Probuphine would be the first and only commercialized treatment of opioid dependence to provide continuous, around-the-clock blood levels of buprenorphine for six months following a single procedure. The ProNeura technology has the potential to be used in developing products for treating other chronic conditions, such as Parkinson's disease, where maintaining consistent blood levels of a dopamine agonist may benefit the patient and improve medical outcomes.
