About SeeThruEquity

SeeThruEquity ("STE") is an equity research and corporate access firm focused on companies with less than \$1 billion in market capitalization. The research is not paid for and

unbiased. STE does not conduct any investment banking or commission based business. STE is approved to contribute research to Thomson Reuters One (First Call), CapitalIQ, FactSet, and Zacks, and distribute its research to its database of opt-in investors. Company research estimates are also contributed to Thomson Estimates, the leading estimates platform on Wall Street.

About Aethlon Medical, Inc.

Aethlon Medical creates affinity biofiltration devices to treat life-threatening diseases. Our lead therapeutic candidate is the Aethlon Hemopurifier®, a first-in-class device that targets the rapid elimination of infectious viruses and cancer promoting exosomes from the circulatory system of treated individuals. Our majority owned subsidiary Exosome Sciences, Inc., is advancing exosome-based liquid biopsies to diagnose and monitor Cancer and Chronic Traumatic Encephalopathy (CTE), a neurodegenerative disorder often found in individuals with a history of repetitive brain trauma.

About The Aethlon Hemopurifier®

Of the hundreds of viruses known to be infectious to man, antiviral drug therapies are approved for fewer than ten. The Aethlon Hemopurifier® provides a broad-spectrum therapeutic strategy to address drug resistant viral pathogens. To date, Hemopurifier therapy has been administered to individuals infected with Ebola virus (Ebola), Hepatitis C virus (HCV) and the Human Immunodeficiency virus (HIV). Time Magazine recently named the Hemopurifier to their list of "Top 25 Inventions" and "The 11 Most Remarkable Advances in Healthcare." Beyond human treatment experiences, pre-clinical Hemopurifier studies have validated the capture of some of world's deadliest pathogens. These include: Dengue hemorrhagic fever, Lassa hemorrhagic fever, H5N1 avian influenza, H1N1 swine flu virus, the reconstructed 1918 influenza virus, West Nile virus and Vaccinia and Monkeypox, which serve as models for human smallpox infection. U.S. clinical progression of Hemopurifier therapy is being advanced under FDA approved clinical studies.

Aethlon is also investigating the use of Hemopurifier therapy to capture tumor-derived exosomes, a significant unaddressed therapeutic target in cancer care. Tumor-derived exosomes promote cancer progression through multiple mechanisms, which include seeding the spread of metastasis and direct suppression of the immune response. In regards to our therapeutic mechanism of action, the Hemopurifier incorporates a patented affinity technique that allows for selective binding to a unique structure that resides on the surface of tumor-derived exosomes and glycoproteins that coat infectious viruses.
