UiPath Achieves Certification with SAP NetWeaver® and SAP S/4HANA® for API Automations

First RPA vendor to certify automations at the API-level; enables SAP customers to automate processes with ease

NEW YORK--(BUSINESS WIRE)-- UiPath, the leading enterprise [Robotic Process Automation](#) (RPA) software company, today announced that two of its SAP API Automations have achieved SAP-certified integrations with SAP NetWeaver® and SAP S/4HANA®, respectively. The proven integrations enable businesses that use SAP solutions to automate processes via the SAP Business API (SAP BAPI) with simplicity and ease. This allows customers to accelerate their digital transformation, automate critical business operations, and ease migrations.

UiPath's SAP API Automations allow enterprises to use software robots for the automation of SAP processes through SAP's own business API in a way that is intuitive for RPA developers. Integrating robots directly with the SAP API helps businesses to make standardized automations especially robust regardless of possible changes to the SAP UI that may result – from enhancements to upgrades. Typical standard use cases for business API automation are sales order entry, invoice verification, update of master data and many more.

“Businesses are deploying RPA to automate mundane back office processes in finance, supply chain and HR and moving people to more value-added functions,” said Param Kahlon, Chief Product Officer at UiPath. “With the new SAP BAPI integration for UiPath robots, SAP customers can now combine the flexibility they have already experienced with RPA UI automation with the robustness of robots calling the SAP business API directly.”

The SAP Integration and Certification Center (SAP ICC) has certified UiPath SAP API Automation 2 for SAP ERP and UiPath SAP API Automation 2 for SAP S/4HANA on-premise integrations.

About UiPath

[UiPath](#) is leading the 'automation first' era—championing a robot for every person and enabling robots to learn new skills through artificial intelligence (AI) and machine learning (ML). Through free and open training, UiPath brings digital era skills to millions of people around the world, improving business productivity and efficiency, employee engagement, and customer experience.

The company's hyperautomation platform combines the #1 Robotic Process Automation (RPA) solution with a full suite of capabilities, including process mining and analytics, that

enable every organization to scale digital business operations at unprecedented speed. The company has already automated millions of repetitive, mind-numbing tasks for businesses and government organizations all over the world, including more than 50% of the Fortune 500 and 8 of the Fortune 10.
