

# Primerica Household Budget Index™: Uncertainty Continues to Increase for Middle-Income Families Over Rising Cost of Necessities and Leveling of Income Growth

DULUTH, Ga.--(BUSINESS WIRE)-- The latest Primerica Household Budget Index™ (HBI™), a monthly economic snapshot measuring the impact of inflation on middle-income households alongside their earned income, found the average purchasing power for necessities fell to 99.4% in February, a 0.3% decrease from a month ago but a 0.4% increase from a year ago. For households earning an annual income of around \$60,000, the increase in necessity goods prices in February cost them about \$110 more in total than in January. Uncertainty among middle-income households is being driven in part by the volatility in the cost of household necessities.

The latest Primerica Household Budget Index™ (HBI™), a monthly economic snapshot measuring the impact of inflation on middle-income households alongside their earned income, found the average purchasing power for necessities fell to 99.4% in February, a 0.3% decrease from a month ago but a 0.4% increase from a year ago. Purchasing power deteriorated in February as rising costs of auto insurance, gasoline and utilities continued to impact middle-income households' budgets.

Purchasing power deteriorated in February as rising costs of auto insurance, gasoline and utilities continued to impact middle-income households' budgets. Auto insurance continues to pressure middle-income families, rising 0.9% in February and more than 11% over the past 12 months. Gasoline prices, which had been falling, rose 1.3% over the month.

The Consumer Price Index (CPI) that measures inflation for a comprehensive basket of goods for all U.S.

households came in at 2.8% in February. Adjusting the CPI to narrow the impact of inflation to focus specifically on middle-income households increases its impact to an estimated 3.6% year-over-year.

Further narrowing the CPI to assess the impact of inflation on the cost of middle-income household necessity items used in the HBI™ (food, utilities, gas, auto insurance, and health care) the estimated adjusted CPI measure shows an increase of 4.2% year-over-year. This highlights the disproportionate impact inflation has on middle-income families as reflected in the HBI™.

### **About the Primerica Household Budget Index™ (HBI™)**

The Primerica Household Budget Index™ (HBI™) is constructed monthly on behalf of Primerica by its chief economic consultant Amy Crews Cutts, PhD, CBE®. The index measures the purchasing power of middle-income families with household incomes from \$30,000 to \$130,000 and is developed using data from the U.S. Bureau of Labor Statistics, the U.S. Bureau of the Census, and the Federal Reserve Bank of Kansas City. The index looks at the cost of necessities including food, gas, auto insurance, utilities, and health care and earned income to track differences in inflation and wage growth.

The HBI™ uses January 2019 as its baseline, with the value set to 100% at that point in time.

Periodically, prior HBI™ values may be modified due to revisions in the CPI series and Consumer Expenditure Survey releases by the U.S. Bureau of Labor Statistics (BLS). Beginning with the December 2024 release of the index, the expenditure weights have been updated to the most recent (Q1 2024) data and auto insurance has been added to the group of necessity items.
