Heat Biologics Announces Financial Results for the Second Quarter Ended June 30, 2015

DURHAM, N.C., Aug. 13, 2015 (GLOBE NEWSWIRE) --[Heat Biologics, Inc.](http://www.heatbiologics.com) (NASDAQ:HTBX), a clinical stage biopharmaceutical company focused on the development of cancer immunotherapies, today announced its financial results for the second quarter ended June 30, 2015.

Second Quarter 2015 Highlights & Recent Developments

- Announced the development of *ComPACT*, a next-generation combination immunotherapy platform
 - Combines two important immunotherapy pathways, checkpoint inhibition and T-cell costimulation, in a single construct
 - First IND with the *ComPACT* platform is expected in 2H 2016
- Presented interim immune response data from ongoing Phase 2 trial with HS-110 in advanced non-small-cell lung cancer at the 2015 American Society of Clinical Oncology (ASCO) annual meeting
- Announced new Phase 1b trial of HS-110 in non-small cell lung cancer in combination with other immunotherapeutic agents
 - Trial will explore combination of HS-110 with various immune modulators.
- Provided an update on immune responder and non-responder phenotypes from the Phase 1 clinical trial of HS-410 in non-muscle invasive bladder cancer at the American Association for Cancer Research (AACR) annual meeting
- Announced key management promotions
 - Taylor Schreiber, M.D., Ph.D. to Chief Scientific Officer, responsible for leading the Company's research efforts including its *ImpACT* and *ComPACT* Therapy drug development platforms
 - Melissa Price, Ph.D., to Vice President of Product Development, responsible for directing the Company's clinical development, regulatory and manufacturing strategy

"We continued to make advances and generate new data from our novel immunotherapy programs this quarter. Of particular note, we unveiled *ComPACT*, a next generation combination immunotherapy platform that holds the promise of delivering T-Cell priming and co-stimulatory molecules in a single biological product," said Jeff Wolf, Heat's CEO. "We also announced a new Phase 1b trial of HS-110 in non-small cell lung cancer which will explore the combination of HS-110 with various immune modulators."

"We expect a number of important value creating milestones in the second half of 2015,"

continued Mr. Wolf. "For HS-410, our immunotherapy candidate for non-muscle-invasive bladder cancer, we plan to release one-year safety and immune response data from our Phase 1 trial and complete enrollment in our Phase 2 trial. Our accomplishments this quarter and throughout the year position us well to achieve our goals in the second half of 2015 and beyond."

Quarter Ended June 30, 2015 vs. Quarter Ended June 30, 2014

Research and development expenses for the second quarter of 2015 decreased 31% to \$0.6 million, compared to the \$0.8 million in the second quarter of 2014. The decrease is attributable to a decrease in pre-manufacturing costs associated with preparing to produce vaccines for use in our clinical trials, offset by increases in lab supplies and other fees.

Clinical and regulatory expenses increased to \$3.4 million, compared to \$1.1 million for the second quarter of 2014. The increase was attributable to increases in clinical trial execution costs, increases in investigator payments, as well as an increase in costs related to the production of vaccines for our clinical trials.

General and administrative expenses for the quarter were \$0.9 million, compared to \$1.0 million for the second quarter of 2014. The decrease is attributable to a decrease in personnel expense, a decrease in facility expense due to allocation to other departments, and a decrease in travel expenses.

Net loss attributable to Heat Biologics, Inc. in the second quarter was \$4.7 million, or (\$0.56) per basic and diluted share. This compares to a net loss of \$2.8 million, or (\$0.44) per basic and diluted share in the second quarter of 2014.

As of June 30, 2015, the Company had cash, cash equivalents, and short-term investments of approximately \$19.3 million. This compares to cash, cash equivalents, and short-term investments of approximately \$14.4 million at December 31, 2014.

Six Months Ended June 30, 2015 vs. Six Months Ended June 30, 2014

Research and development expenses for the six months ended June 30, 2015 (2015 Period) decreased to \$1.1 million, compared to \$1.4 million for the six months ended June 30, 2014 (2014 Period). The decrease from the 2014 Period to the 2015 Period is attributable to a decrease in pre-manufacturing costs associated with preparing to produce vaccines for use in our clinical trials, as well as decreases in patent, license and other professional fees, offset by increases in compensation costs associated with new hires, lab supplies and other costs, and depreciation related to the build out of the lab facility and other associated costs.

Clinical and regulatory expenses increased to \$5.5 million, from \$2.0 million in the first six months of 2014. The increase year over year is attributable to increases in clinical trial execution costs, increased investigator payments, as well as an increase in costs related to the production of vaccines for our clinical trials. Additionally, personnel cost, including consultants, professional fees, facilities costs, travel, and license fees increased.

General and administrative costs increased to \$2.2 million, from \$2.0 million in the

comparable period in 2014. The increase is attributable to increase in pay to certain key employees, an increase in professional services such as accountants, attorneys and investor relations, and travel. These increases are offset by a decrease in facility and related costs as well as a decrease in depreciation.

About Heat Biologics, Inc.

Heat Biologics, Inc. (www.heatbio.com) is a clinical-stage biopharmaceutical company focused on developing its novel, "off-the-shelf" *ImPACT*[™] and *ComPACT* therapeutic vaccines to combat a wide range of cancers. Our therapies are designed to deliver live, genetically-modified, irradiated human cells which are reprogrammed to "pump out" a broad spectrum of cancer-associated antigens, together with a potent immune adjuvant called "gp96" to educate and activate a cancer patient's immune system to recognize and kill cancerous cells. Heat is conducting a Phase 2 trial of its [viagenpumatucl-L \(HS-110\)](#) in patients with non-small cell lung cancer, as well as a Phase 2 trial with its [vesigenurtacel-L \(HS-410\)](#) in patients with non-muscle invasive bladder cancer.

Forward Looking Statements

This press release includes forward-looking statements on our current expectations and projections about future events. In some cases forward-looking statements can be identified by terminology such as "may," "should," "potential," "continue," "expects," "anticipates," "intends," "plans," "believes," "estimates," and similar expressions. These statements are based upon current beliefs, expectations and assumptions and include statements regarding the continued advances of the programs with the lead clinical trials, the expected achievement of clinical milestone, and Heat's potential for impact of Heat's *ImPACT*[™] Therapy. These statements are subject to a number of risks and uncertainties, many of which are difficult to predict, including the ability for Heat's *ImPACT*[™] Therapy to perform as designed, the ability to timely enroll patients and complete the clinical trial on time, the other factors described in our annual report on Form 10-K for the year ended December 31, 2014 and *our* other filings with the SEC. The information in this release is provided only as of the date of this release, and we undertake no obligation to update any forward-looking statements contained in this release based on new information, future events, or otherwise, except as required by law.
