BOARDWALKTECH

Single Customer Cells Under Management Exceeds 1 Billion

Palo Alto, California – January 6, 2016

Boardwalktech, Inc., the leading provider of spreadsheet data management technology for the enterprise and developer of the patented Boardwalk Application Engine (BAE) announced today that one of its global customers using Boardwalk's next generation enterprise data management for Excel data has exceeded over 1 billion cells under management with Boardwalk.

Unlike other technology which only work at the file level and require email or check-in/out when working with Excel based data, only Boardwalk manages cell-level data from inside Excel on the desktop through the patented Boardwalk database application running in the cloud or behind the firewall. For Boardwalk customers, being able to continue using Excel on the desktop just like they do today has been the key to wide adoption and usage across all users.

"With research showing more than 70 percent of enterprise workloads are still running in corporate data centers, it's critical that companies have an effective way to work with spreadsheet-based data," said Andrew T. Duncan, President and CEO. "Boardwalk's cell-level data management technology is the ideal solution for working with spreadsheet data because it gives users a way to scale directly what they are doing in Excel without re-platforming. We firmly believe moving your data, rather than the application, is the best scale path and our customers agree. We're excited about this significant milestone as it firmly demonstrates the scale capability of the Boardwalk application."

About Boardwalktech:

Boardwalktech provides a patented, enterprise spreadsheet data management technology which automates and enterprise enables spreadsheet-based business processes making them collaborative and integrated with the extended enterprise.
