BOARDWALKTECH

Boardwalktech and Cognizant Enter into Global Partnership – Continuing Momentum in BPO Space

Palo Alto, California – December 31, 2016

Boardwalktech, Inc., a provider of collaborative applications for the enterprise and developer of the patented Boardwalk Application Engine (BAE) announced today that it has entered into a global business partnership with Cognizant -- a leader in global business & technology services. Effective immediately, Cognizant is able to deliver applications and services leveraging the Boardwalk Application Engine.

Cognizant brings its clients the best technology and business expertise in today's digital world which now includes application technology from Boardwalktech focused on automating, scaling, and enterprise enabling manual processes across the extended enterprise. Through its global reach of over 250K employees, Cognizant is able to support the complete automation efforts of any company including now manual desktop processes which today are primarily run in spreadsheets.

"Cognizant combines a passion for client satisfaction, technology innovation, deep industry and business process expertise and a global, collaborative workforce that embodies the future of work," says Andrew T. Duncan, CEO of Boardwalktech. "This future includes the continued use of information collected from across the extended enterprise which needs to be enterprise enabled through automation, the addition of collaboration, and the ability to integrate with other systems and data. Only Boardwalktech provides these capabilities through its unique, patented product offerings."

Cognizant and Boardwalktech look forward to engaging with existing and new clients bringing tremendous combined technology and services value to our joint customers. For more information, contact Boardwalktech or Cognizant.

About Boardwalktech:

Boardwalktech provides a patented, collaborative enterprise data management technology offered as either a platform service or industry specific application delivered on premise or in the cloud which automates and scales manual processes typically run today in spreadsheets making them enterprise quality and available across multiple platforms and devices and integrated with the extended enterprise.
