

# NIR spectroscopy for PI detection in all skin tones

Yaniv Cohen PhD

Ronnie Klein BSc MBA

# NPIAP 2023 *Annual Conference*

**Presenters:**

Yaniv Cohen      PhD MSc.  
Ronnie Klein     BSc MBA

Disclosure:

IR-MED co-founders

# Objectives

- Background of the problem
- Solution - IR sensing of multiple biomarkers
  - Near IR spectroscopy
  - Scanning beneath the skin surface
  - Blood Flow Meter
  - Personalized measurements
  - AI algorithm
- Optical spectroscopy devices by IR-MED
  - POC, PressureSafe scanners

# Background – PI in Patients with Dark Skin Tones

- Research shows that people with dark skin tones tend to have\*:
  - Higher PI rates
  - Higher risks of mortality from PI
  - More severe PIs
- Lack of knowledge of PI appearance in dark skin tones:
  - Delays early identification and treatment
  - Results in more severe PIs
  - Increases financial costs for healthcare organizations

## It's time for technology!

# Solution: IR sensing of multiple biomarkers

**1**

Multiple bio-  
markers related to  
PI development in  
different skin  
layers

**2**

Structural  
changes in  
different skin  
layers

**3**

Blood flow  
parameter  
monitoring in  
the tissue

**Equally effective for all skin tones**  
For detection of Stage 1 PI and sDTI

# Stars in Space and Pressure Injury

Visual light image  
of a central region  
of the Milky Way

The same  
region in  
space

Near infrared (NIR) light  
image of a central region of  
the Milky Way

# NIR Spectroscopy in Space

25<sup>th</sup> Dec. 2021  
James Webb  
space telescope

# Diffused Reflectance Optical Spectroscopy

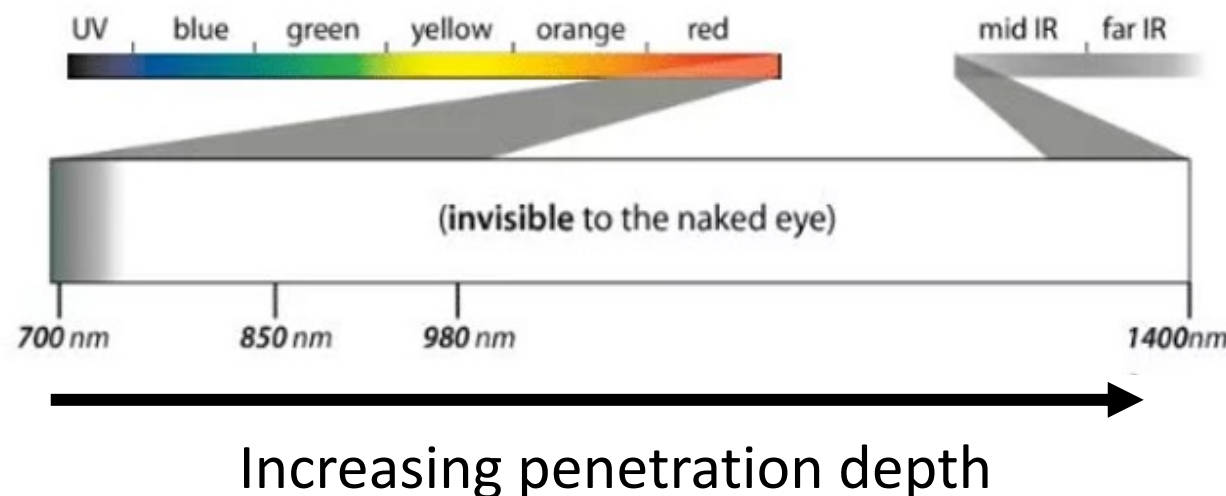

- A non-invasive method that allows in-vivo examination and measurement of the unique optical characteristics of biological tissue
- Optical properties of biological tissue change the spectrum of reflected or transmitted light in accordance with the tissue's structural and chemical composition (chromophore content)
- Chromophores (e.g. collagen, water, oxyhaemoglobin, melanin, etc.)

# Near Infrared Spectrum

- Effective for all skin tones (not affected by melanin content)
- Non-invasive
- Harmless light
- Deep penetration into skin layers
- Sensing the invisible – invisible data from important physiological parameters (biomarkers) and tissue structure

The wavelet of NIR spectrum

# Scanning beneath the skin's surface

- Detecting underlying skin surface changes using multiple optical wavelengths
- Scanning at different layer depths
- Detecting structural changes in different skin layers
- Analyzing the tissue content of different layers

# Blood Flow Meter

- Blood flow measurement is physiologically and clinically important
- Blood flow in PI is different than in healthy tissue
- Measures blood cell perfusion in the microvasculature of tissues and organs
- PPG , Pulse Wave Velocity, Diffused Correlation Spectroscopy, Doppler Flowmetry (DF)

Tamura, T. "Blood Flow Measurement (5.05)." Comprehensive Biomedical Physics 2014: 91–105. Web.

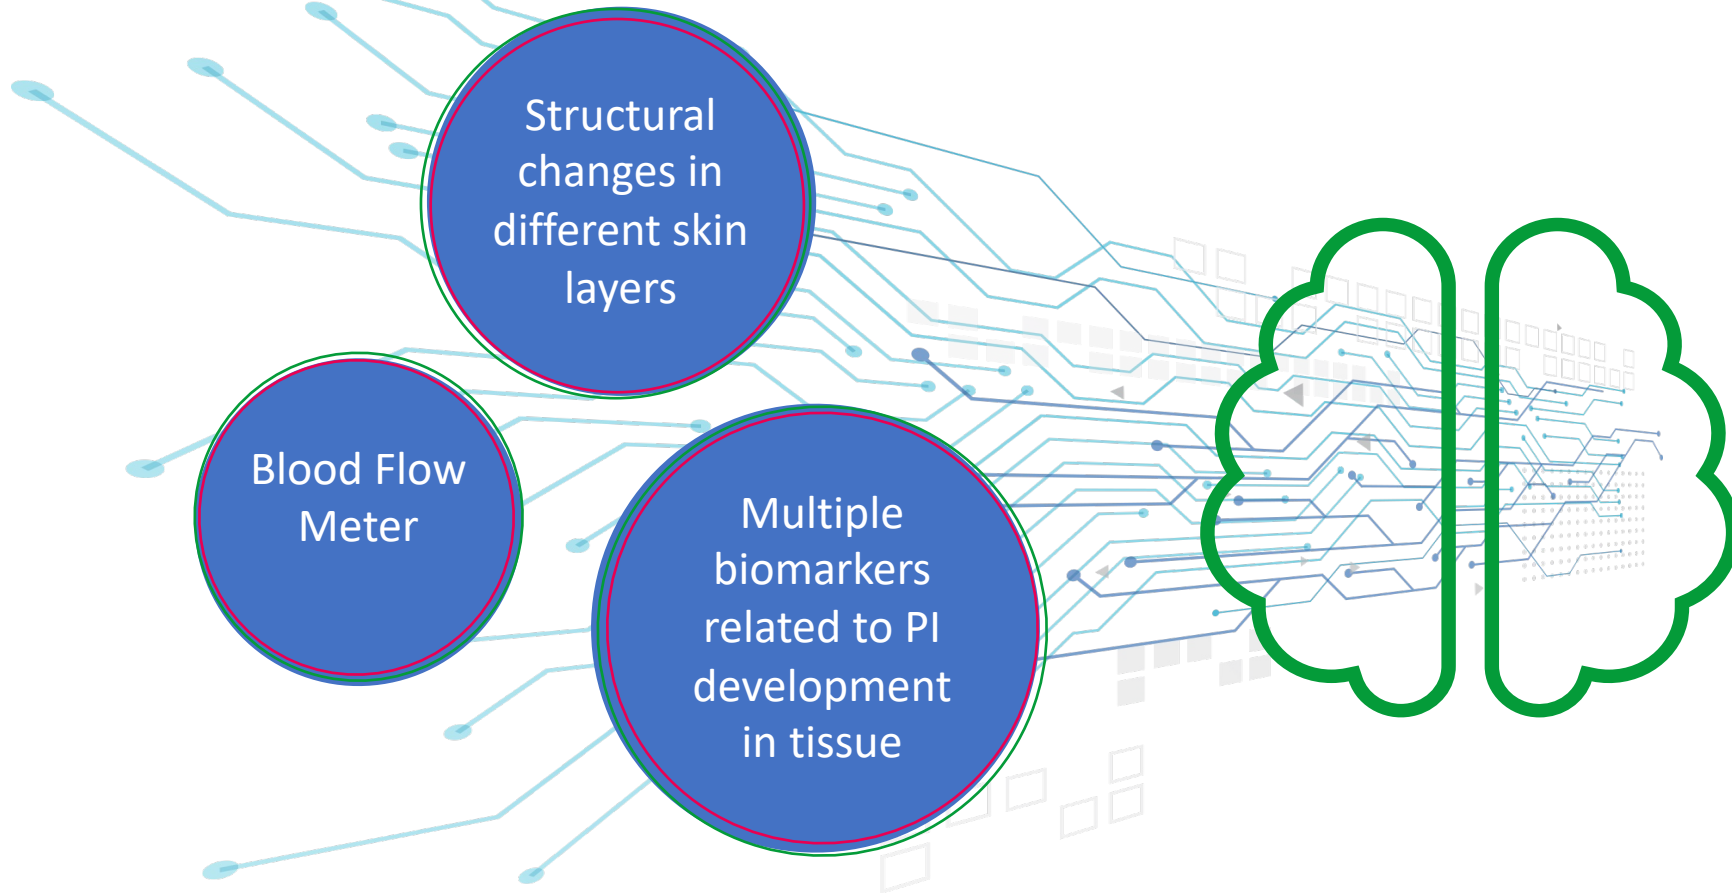

# Personalized measurements

- Personal calibration allows reliable & accurate measurement for each patient
- Per patient acquisition of sample measurement from skin reference area with low risk of PI
- This method overcomes:
  1. Skin tone variance between patients
  2. Skin structure variance between patients
  3. Skin structure variance between different measurement sites on the body

# AI algorithm

For detection of PI stage-1 and sDTI

# OPTICAL SPECTROSCOPY DEVICES

## IR-MED

From research to clinic

**NPIAP  
2023**  
*Annual Conference*

# POC – Study

- 2 medical centers in Israel
- Only Stage 1 PIs were included in the trial. Higher grades of PI were excluded.
- PI was diagnosed by certified doctors and scanned by the device
- Total of 76 samples were taken from both medical centers
- **Results:** 94.7% accuracy in identification of Stage 1 pressure injuries

# PressureSafe 1<sup>st</sup> Generation

- Scanner and App
- Handheld electro-optic scanner with tablet and App
- Based on LED's (specific wavelengths) and detectors
- Multiple biomarkers and optical blood flow detector
- For use with patients at increased risk of pressure injury
- Personalized medical device
- Currently undergoing useability studies at 2 medical centers in Israel

# PressureSafe – advanced technology

**EFFECTIVE FOR  
ALL SKIN TONES**

**DISPOSABLE  
TIP**

**EMR/EHR  
CONNECTIVITY**

**SCANS BENEATH  
THE SKIN SURFACE**

**AI INSIDE**

**CAMERA FOR  
DOCUMENTATION**

**MULTIPLE  
BIOMARKERS**

\*Not yet available for commercial use. Expected US launch: H2/2023

# Takeaway message - Equity in Prevention PI

- Non-invasive IR sensing of multiple biomarkers – for accurate results
- Personalized medical device – calibrates to each patient's skin
- Scans beneath the skin surface – sensing the invisible
- Near Infrared light – deep penetration, effective for all skin tones
- Scans in different layers and depths – to detect structural changes
- AI – machine learning algorithm
