## **Anixa Biosciences Chairman and CEO Discusses Pioneering CAR-T Cell Therapy and Breast Cancer Vaccine in Alpha Wolf Trading Interview**

SAN JOSE, Calif., Feb. 14, 2025 /PRNewswire/ -- [Anixa Biosciences, Inc.](#) ("Anixa" or the "Company") (NASDAQ: ANIX), a biotechnology company focused on the treatment and prevention of cancer, today announced that its Chairman and CEO, Dr. Amit Kumar, was featured in an interview with Alpha Wolf Trading. In the discussion, Dr. Kumar provided insights into Anixa's groundbreaking CAR-T cell therapy for ovarian cancer and its breast cancer vaccine program, highlighting the Company's innovative approach to immunotherapy and cancer prevention.

During the interview, Dr. Kumar provided key insights into Anixa's CAR-T cell therapy, which is designed to harness the power of the immune system to target ovarian cancer cells. Unlike traditional CAR-T therapies that have been successful in blood cancers, Anixa's approach aims to overcome the challenges of treating solid tumors, representing a major advancement in immunotherapy.

Dr. Kumar also discussed Anixa's breast cancer vaccine program, which is designed to prevent triple-negative breast cancer (TNBC)—the most aggressive and hardest-to-treat form of breast cancer. Currently in clinical trials, this vaccine has the potential to be a game-changer in breast cancer prevention.

A key strength of Anixa's business model is its capital efficiency and low burn rate, enabled by its strategic partnerships with world-renowned research institutions. By leveraging collaborations with its partners, Anixa minimizes the need for large in-house R&D expenditures, ensuring that its financial resources are allocated efficiently.

"Our partnership-driven approach allows us to advance cutting-edge therapies while maintaining a low burn rate," said Dr. Kumar. "By working with top-tier institutions, we maximize the impact of our funding and accelerate the development of novel cancer treatments without the heavy financial burden typically associated with biotech companies."

### **About Anixa Biosciences, Inc.**

Anixa is a clinical-stage biotechnology company focused on the treatment and prevention of cancer. Anixa's therapeutic portfolio consists of an ovarian cancer immunotherapy program being developed in collaboration with Moffitt Cancer Center, which uses a novel type of CAR-T, known as chimeric endocrine receptor-T cell (CER-T) technology. The Company's vaccine portfolio includes vaccines being developed in collaboration with Cleveland Clinic to treat and prevent breast cancer and ovarian cancer, as well as additional cancer vaccines to address many intractable cancers, including high incidence malignancies in lung, colon, and prostate. These vaccine technologies focus on immunizing against "retired" proteins that have been found to be expressed in certain forms of cancer. Anixa's business model of partnering with world-renowned research institutions on all stages of development allows the Company to continually examine emerging technologies in complementary fields for further development and commercialization.
