Vuzix Blade Smart Glasses App seeCOLe Wins Cerner Corporation's Electronic Health Record Code App Challenge

ROCHESTER, N.Y., Oct. 25, 2018 /PRNewswire/ -- [Vuzix® Corporation](#) (NASDAQ: VUZI), ("Vuzix" or, the "Company"), a leading supplier of Smart Glasses and Augmented Reality (AR) technology and products, is pleased to announce that [seeCOLe \(see Clinical data On Lens\)](#), a health app for the Vuzix Blade® that enables clinicians to navigate and document into their patient electronic health records by hands-free by voice command, was awarded first place at the Cerner Corporation Code App Challenge during the 2018 Cerner Health Conference held in Kansas City, MO on October 9-11.

Cerner Corporation's health technologies connect people and information systems at more than 27,500 contracted provider facilities worldwide and are dedicated to creating smarter and better care for individuals and communities. Recognized globally for innovation, Cerner assists clinicians in making care decisions and assists organizations in managing the health of their populations. Cerner brings together thousands of medical professionals each year at their annual Cerner Health Conference and at this year's conference they hosted the code App Challenge, which gives third-party developers and Cerner health systems the opportunity to create, develop, and pitch innovative solutions to improve health outcomes.

seeCOLe, which stands for "see Clinical data On Lens", is an augmented reality health app that uses SMART on FHIR (Fast Healthcare Interoperability Resource), which enables

clinicians to navigate and document information into their organizations' electronic health record system using smart glasses. While using seeCOLe, the clinician's verbal commands can interact with the electronic health record, which populates data from the patient's chart, and display it on the Vuzix Blade Smart Glasses. Once the patient data is accessed, the seeCOLe application can be coached via voice or touch features to navigate through patient records. seeCOLe coupled with the Vuzix Blade provides hands-free documentation of patient data at the bedside, during a consultation, in isolation areas and in the operating room all without losing sight of the patient. The augmented reality solution also provides patient data within the clinician's point of view wirelessly, which enables the clinician to interact freely and increase the clinician-to-patient interaction.

"The overall form factor, wearability and performance of the Vuzix Blade Smart Glasses has drawn rave reviews from B2C customers, who see a tremendous opportunity to disrupt the existing market and build hands-free solutions around the Vuzix Blade platform," said Paul Travers, Vuzix President and Chief Executive Officer. "Innovative health applications like seeCOLe, delivered through a see-through display on the Vuzix Blade Smart Glasses, can not only help clinicians provide improved care, but also increase their interaction with patients."
