Weave Introduces AI-Driven Voicemail Transcriptions for Healthcare Providers

New feature follows growing acceptance of AI in healthcare settings, according to a new report

LEHI, Utah--(BUSINESS WIRE)-- Weave (NYSE: WEAV), a leading all-in-one experience platform for small and medium-sized healthcare practices, today announces the addition of AI-driven voicemail transcriptions to its platform.

Now available to Weave's 27,000+ customers, Voicemail Transcription automatically transcribes voicemails from patients allowing for efficient, visible, and private reading experiences. With this update, users will now see the voicemail transcription when they click on the Voicemail tab within their Desktop Application or within the mobile app, improving overall user experience by making it faster to consume messages without having to listen to the audio, which can often be difficult in busy settings.

"AI has exploded in popularity over the past year, and we're taking steps to ensure Weave is delivering state of the art offerings that empower our customers to enhance patient experiences and deliver top of the line care," said Branden Neish, Chief Product and Technology Officer at Weave. "AI will only continue to grow in popularity and daily use, which will have a transformative impact on the future of the healthcare industry. Weave customers that have already implemented AI into their practices claim they save an average of an hour a day with the technology."

In a new customer and [consumer report](#) conducted by Weave, the company found that patients are accepting of AI in healthcare settings and they see it leading to enhanced care and patient experiences. In fact, the majority of consumers (65%) are open to providers using AI tools in their practices. The report also found that consumers and providers are aligned with how they think AI will impact the healthcare industry, with two in three consumers (67%) and 3 in 4 (75%) healthcare providers believing that AI is likely to become a prevalent tool in healthcare.

"Artificial Intelligence is the catalyst for a new era in healthcare," says Dr. Matt Nejad, DDS of Beverly Hills, CA. "Weave's AI-enabled voicemail transcripts are a leap in this direction, providing automation and actionable insights that empower providers to focus on what truly matters: patient care."

This announcement follows months of AI-driven activity from Weave to enhance features that allow healthcare providers to deliver quality care and improve patient experiences, including [Email Assistant](#) and [Response Assistant](#).
