

Emergency response arrangements summary document

Reference: ASI Performance Standard V3.1 – Section 2.7

Purpose:

This document provides a high-level summary of the emergency response arrangements implemented across the production facilities of Ardagh Metal Packaging SA (AMP), in alignment with the Aluminium Stewardship Initiative (ASI) Performance Standard V3.1, section 2.7.

Overview:

In accordance with ASI requirements, AMP has developed and implemented site-specific emergency response plans for each of its production facility locations. These plans are designed to ensure the safety of personnel and general public, minimise environmental impact, and facilitate effective coordination with local emergency services.

Key elements covered in site-level emergency plans:

- Identification of potential emergency scenarios (e.g. power outage, fire, chemical spill, natural disaster).
- Roles and responsibilities of emergency response personnel.
- Evacuation procedures and assembly points.
- Communication protocols during emergencies.
- Coordination with local emergency services.
- Training for employees.

Confidentiality considerations:

Detailed emergency response plan information is maintained at the facilities. To protect sensitive personal, operational, safety and security information, this summary does not include:

- Personal contact details of emergency personnel.
- Specific locations of vulnerabilities such as hazardous material storage or utilities.
- Detailed security arrangements.

Relevant production facilities:

Alagoinhas	Hermsdorf	Rugby
Braunschweig	Jacarei	Oss
Deeside	La Ciotat	Weißenthurm
Enzesfeld	Manaus	Wrexham
Hassloch	Radomsko	Valdemorillo

All production facilities referenced in this document are certified under internationally recognised standards:

- ISO 14001 ensures environmental risk management.
- ISO 45001 ensures worker safety and legal compliance.
- ISO 9001 ensures quality and operational continuity.

These certifications reflect the company's commitment to systematic risk management, regulatory compliance, and continuous improvement. The emergency response arrangements at each facility are integrated within these management systems, ensuring that procedures for incident prevention, preparedness, response, and recovery are well-documented, regularly reviewed, and effectively implemented. This alignment reinforces the robustness and reliability of the emergency planning framework across all locations.

These standards require and reinforce the development, implementation, and continual improvement of emergency response plans, making them fully aligned with ASI's expectations under section 2.7.

For internal use and audit purposes, detailed site-specific emergency response plans are maintained securely and are available for review by ASI-accredited auditors and relevant authorities.
