Pressure BioSciences, Inc. Reports Strong First Quarter 2013 Financial Results

Total Revenue Up 21%; Operating Loss Down 24%; Consumable Sales Up 64%; Investor Conference Call Slated for Thursday, May 23 at 11:00 AM EDT

SOUTH EASTON, MA -- (Marketwired) -- 05/21/13 -- Pressure BioSciences, Inc. (OTCQB: PBIO) ("PBI" or the "Company") today announced financial results for the three-month period ended March 31, 2013 and provided a business update.

Total revenue for the first quarter of 2013 was \$370,737 compared to \$305,661 for the same period in 2012, a 21% increase. Revenue from the sale of pressure cycling technology ("PCT") products and services was \$221,569 for the first quarter of 2013 compared to \$164,772 for the same period in 2012, a 34% increase. Grant revenue in the first quarter of 2013 was \$149,168 compared to \$140,889 for the same period in the prior year. Sales of PCT-based consumables generated revenue of approximately \$27,200 for the three months ended March 31, 2013 compared to approximately \$16,600 for the same period in 2012, an increase of 64%.

Operating loss for the first quarter of 2013 decreased to \$725,024, from \$964,582 for the same period in 2012, a reduction of 24%. Contributing to this decrease in operating loss were quarter over quarter decreases in total expenses from research and development (\$25,153, or 9%), marketing and selling (\$44,192, or 19%), and general and administrative (\$131,487, or 19%).

Loss per common share -- basic and diluted -- was \$0.11 for the first quarter of 2013 compared to \$0.14 for the same period in 2012.

Conrad F. Mir, Chief Financial Officer of PBI, said: "In addition to strong quarter over quarter (Q1 2013 vs. Q1 2012) revenue increases, both total revenue and PCT products revenue showed substantive quarterly sequential increases (Q1 2013 vs. Q4 2012) as well, posting gains of 72% and 81%, respectively. We achieved these results while decreasing expenses in research and development, selling and marketing, and general and administrative. Our financial performance for the first quarter of 2013 bolstered PBI's significant progress in reaching our stated goal of developing a sound financial roadmap moving forward."

Richard T. Schumacher, President and CEO of PBI, commented: "Since the beginning of the year, we have reported a number of operational achievements. Among these is

continued progress in the development of a PCT-based method to increase the quality and throughput of rape kit testing. Such an improvement could potentially result in a significant reduction in the backlog of untested rape kits in the US, currently estimated at more than 200,000. We believe that timely testing of rape kits could result in the apprehension and conviction of perpetrators of sexual assaults who are currently free because of this testing backlog."

Mr. Schumacher continued: "We remain very excited about our prospects for 2013. We believe that PCT product sales will continue to increase, that we will continue to manage our operating expenses, and that the short and long-term financing strategies we have spent the past few months developing will be successfully implemented. In addition, we also believe that we will successfully release several new, important products to the market in 2013. Finally, we believe that the combination of all of these achievements will result in a stronger company, resulting in a positive effect on the value of PBI for all of our shareholders."

About Pressure BioSciences, Inc.

Pressure BioSciences, Inc. ("PBI") (OTCQB: PBIO) is focused on the development, marketing, and sale of proprietary laboratory instrumentation and associated consumables based on Pressure Cycling Technology ("PCT"). PCT is a patented, enabling technology platform with multiple applications in the estimated \$6 billion life sciences sample preparation market. PCT uses cycles of hydrostatic pressure between ambient and ultra-high levels to control bio-molecular interactions. PBI currently focuses its efforts on the development and sale of PCT-enhanced sample preparation systems (instruments and consumables) for mass spectrometry, biomarker discovery, bio-therapeutics characterization, vaccine development, soil and plant biology, forensics, histology, and counter-bioterror applications.

Forward Looking Statements

Statements contained in this press release regarding the Company's intentions, hopes, beliefs, expectations, or predictions of the future are "forward-looking" statements within the meaning of the Private Securities Litigation Reform Act of 1995. Forward looking statements include the estimated size of the life sciences sample preparation market; the potential applications of the Company's PCT; the Company's plans and ability to secure sufficient financing to support working capital needs; statements related to the strong financial and operating results of the 2013 first quarter, and the Company's expectations that the increase in revenues and reduction in costs will continue in 2013 and beyond; that we will be successful in releasing new products to the market in 2013 and beyond, including a method to increase the quality and throughput of rape kit testing, and that such a method could result in the apprehension and conviction of perpetrators of sexual assault crimes; that we have made significant progress in our goal to develop and implement a sound financial roadmap for PBI, and that we will successfully implement both short and long-term financial plans, and that these successes will result in a stronger Company and a positive effect on the value of PBI for all shareholders. These statements are based upon the Company's current expectations, forecasts, and assumptions that are subject to risks, uncertainties, and other factors that could cause actual outcomes and results to

differ materially from those indicated by these forward-looking statements. These risks, uncertainties, and other factors include, but are not limited to: the Company's financial results for the quarter ended March 31, 2013 may not necessarily be indicative of future results as future revenues may not meet expectations due to the possible failure of the Company's products to achieve commercial acceptance, changes in customer's needs and technological innovations, expenses may be higher than anticipated due to unforeseen costs or cost increases, and the Company may not secure sufficient capital to implement its plans; possible difficulties or delays in the implementation of the Company's strategies that may adversely affect the Company's continued commercialization of PCT; the Company may not be successful in selling its PCT product line because scientists may not perceive the advantages of PCT over other sample preparation methods; that other researchers may not be able to replicate the data the Company previously reported or see the advantages of using the Company's PCT platform in previously reported studies; and if actual operating costs are higher than anticipated, or revenues from product sales are less than anticipated, the Company may need additional capital beyond May 2013. Further, given the uncertainty in the capital markets and the current status of the Company's product development and commercialization activities, there can be no assurance that the Company will secure the additional capital necessary to fund its operations beyond May 2013 on acceptable terms, if at all. These statements are based upon the Company's current expectations, forecasts, and assumptions that are subject to risks, uncertainties, and other factors that could cause actual outcomes and results to differ materially from those indicated by these forward-looking statements. These risks, uncertainties, and other factors include, but are not limited to, the risks and uncertainties discussed under the heading "Risk Factors" in the Company's Annual Report on Form 10-K for the year ended December 31, 2012, and other reports filed by the Company from time to time with the SEC. The Company undertakes no obligation to update any of the information included in this release, except as otherwise required by law.
