Company Overview

Adaptimmune is a leader in TCR T-cell therapy, focused on developing novel cancer immunotherapy products. We utilize the body’s own machinery – the T-cell – to target and destroy cancer cells by increasing the affinity of naturally occurring T-cell receptors (TCRs). We have developed a proprietary T-cell receptor platform that enables us to identify cancer targets, find and genetically engineer T-cell receptors, or TCRs, and produce TCR therapeutic candidates called SPEAR (Specific Peptide Enhanced Affinity Receptor) T-cells that recognize these targets on cancer cells. We engineer a patient’s own T-cells to express our SPEAR TCRs to target and potentially destroy tumors.

Our wholly-owned pipeline includes SPEAR T-cell therapies targeting ADP-A2M10 (MAGE-A10), ADP-A2M4 (MAGE-A4), and ADP-A2AFP (AFP), which are being investigated in clinical studies across multiple solid tumor indications. We continue to build a pipeline of further proprietary TCR therapeutic candidates, second generation treatment options, as well as allogeneic (off-the-shelf) solutions.

We believe our approach will lead to SPEAR T-cells with the potential to significantly impact cancer treatment and the clinical outcomes of cancer patients.

Adaptimmune Granted Access to PRIority MEdicines (PRIME) Regulatory Support by the European Medicines Agency for ADP-A2M4 for the Treatment of Synovial Sarcoma
