Redwire Roll-Out Solar Arrays Successfully Deployed on First Commercial GEO Satellite for Maxar's Ovzon 3 Mission

JACKSONVILLE, Fla.--(BUSINESS WIRE)-- Redwire Corporation (NYSE:RDW), a leader in space infrastructure for the next-generation space economy, announced today that two 5-kW Roll-Out Solar Arrays (ROSA) have successfully deployed and are operating nominally in geosynchronous orbit on the Maxar Space Systems-built Ovzon 3 communications satellite, which successfully launched aboard a SpaceX Falcon 9 on Wednesday, January 3, 2024. Ovzon 3 represents the first-ever integration of Redwire's ROSA technology with a commercial satellite following years of successful operations on the International Space Station (ISS) and on NASA's Double Asteroid Redirection Test (DART) mission.

"Redwire is proud to support the Ovzon 3 mission with innovative ROSA technology, which will provide reliable, compact, and scalable solar power generation for the spacecraft," said Adam Biskner, President, Space Systems at Redwire. "Redwire's ROSA technology is continuing to leverage unparalleled innovation in solar power generation to enable the most ambitious missions from LEO to GEO and beyond."

"We appreciate the partnership with Redwire and their commitment to excellence and reliability as a trusted supplier for this mission," said Chris Johnson, CEO, Maxar Space Systems. "We look forward to partnering with them again in the future."

As the first commercial integration of Redwire's ROSA technology, the two solar array wings for the Ovzon 3 satellite extend ROSA's successful heritage, including the six currently installed and successfully operating ROSAs on the ISS and the two wings used on NASA's DART mission. In June 2023, Redwire [announced](#) a follow-on contract to build two additional ROSAs for the ISS.

ROSA's groundbreaking design is also being used to supply power for the Maxar-built Power and Propulsion Element (PPE), which will be part of the first segment of the NASA-led lunar Gateway planned to launch late next year. The PPE will be powered by a pair of 37-kW ROSA wings, some of the most powerful spacecraft solar arrays ever built.

About Redwire

Redwire Corporation (NYSE:RDW) is a global space infrastructure and innovation company enabling civil, commercial, and national security programs. Redwire's proven and reliable capabilities include power solutions, RF systems and satellite payloads, GN&C components and avionics, deployable structures and critical mechanisms, digital engineering, testing and analysis, and revolutionary microgravity R&D and manufacturing. Redwire combines

decades of flight heritage and proven experience with an agile and innovative culture. Redwire's 700 employees working from 14 facilities located throughout the United States and Europe are committed to building a bold future in space for humanity, pushing the envelope of discovery and science while creating a better world on Earth.
