# Major Media Outlet Chooses C-Bond Systems' Ballistic-Resistant Film Solution for Protection

**C-Bond BRS is an independently validated, patent-protected system that increases the structural integrity of glass through nanotechnology**

HOUSTON, July 22, 2019 (GLOBE NEWSWIRE) -- [C-Bond Systems](#) (the "Company" or "C-Bond") (OTC: CBNT), a nanotechnology company that improves and strengthens glass, announced today that a major media outlet has chosen the C-Bond Ballistic-Resistant Film System (BRS) to protect its facilities.

C-Bond BRS is a ballistic-resistant film system that increases the structural integrity of glass through nanotechnology. It is validated by an independent third-party laboratory to provide National Institute of Justice (NIJ) Level I, Level IIA, Level II, and Underwriters Laboratories (UL) 752 ballistic-resistant protection.

C-Bond BRS consists of the patented C-Bond glass strengthening technology, which increases glass strength and flexibility by chemically bonding to the defects randomly distributed on the glass surface to increase impact resistance and prevent breakage, and a private-label security film. It has been installed in more than 70 schools, government buildings, and other high-security facilities around the country.

"In this day and age, although it is unfortunate, security must be taken seriously and organizations must be proactive in protecting their employees," said Scott R. Silverman, C-Bond's Chairman and CEO. "We are proud to provide this media outlet the C-Bond BRS solution to secure its facility and believe it is a testament to our technology and experience in the market."

C-Bond's glass strengthening technology is protected by 22 patents and patent pending applications. The C-Bond solution increases the mechanical properties of the window glass unit, enabling the glass to dissipate higher energy by targeting and repairing the microscopic flaws and defects that are randomly distributed naturally on the glass surface. These surface imperfections weaken the glass composite structure and initiate failures. C-Bond chemically bonds to the defects increasing both strength and flexibility.

## About C-Bond

C-Bond Systems, Inc., headquartered in Houston, Texas, is an advanced nanotechnology company and sole owner, developer and manufacturer of the C-Bond technology. C-Bond is a patent-protected nanotechnology product that is scientifically tested and commercially proven to significantly increase the strength, safety and performance levels of glass and window film products. *Statements in this press release about our future expectations constitute "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, Section 21E of the Securities Exchange Act of 1934, and as that term is defined in the Private Litigation Reform Act of 1995. Such forward-looking statements involve risks and uncertainties and are subject to change at any time, and our actual results could differ materially from expected results. These risks and uncertainties include, without limitation, C-Bond's ability to raise capital; the Company's ability to successfully commercialize its products; as well as other risks. Additional information about these and other factors may be described in the Company's filings with the Securities and Exchange Commission ("SEC") including its Form 10-K filed on April 1, 2019, its Forms 10-Q filed on May 10, 2019, November 14, 2018, and August 14, 2018, and in future filings with the SEC. The Company undertakes no obligation to update or release any revisions to these forward-looking statements to reflect events or circumstances after the date of this statement or to reflect the occurrence of unanticipated events, except as required by law.*
