Capstone Turbine Announces Two-Megawatt CHP Order From Regatta Solutions to Upgrade Southern California Technology Innovation Firm

CHATSWORTH, Calif., Sept. 4, 2014 (GLOBE NEWSWIRE) -- Capstone Turbine Corporation (www.capstoneturbine.com) (Nasdaq:CPST), the world's leading clean technology manufacturer of microturbine energy systems, announced today that it received an order for two C1000 microturbines to upgrade a technology innovation firm in Southern California.

Capstone's distributor in California, Regatta Solutions, secured the two-megawatt order.

The technology innovation firm conducted an analysis of their energy usage and decided it was time to upgrade to a more efficient and reliable power generation solution. After comparing various technologies, the firm chose Capstone's clean-and-green microturbines.

The primary criteria in the decision making process were reliability, availability, cleanliness, and cost savings. The two natural gas fired C1000 microturbines are dual mode, meaning they can operate independently of the grid or work with the grid in a load sharing capacity. This ensures the firm is receiving the lowest electricity cost available at various times of the day and year.

Additionally, the C1000's will be operating in a combined heat and power (CHP) application. The clean exhaust from the microturbines will be captured via heat exchangers and will provide hot air and hot water to the facility. This boosts the overall efficiency of the firm's energy usage to greater than 80%.

"High system resiliency and independence of the grid for secure power were key drivers for this project," stated Steven Acevedo, President and CEO of Regatta Solutions. "The Capstone C1000 microturbine system provided the best solution for our client's requirements of high availability and high energy efficiency."

Because the technology innovation firm is located in Southern California, a state with some of the strictest emissions standards in the world, minimizing the environmental impact was an important factor in the decision making process. Capstone microturbines meet and exceed Tier 4 level emission standards with no exhaust after treatment. Reciprocating generator sets require bolt on exhaust after treatment equipment to meet these strict emission standards, adding to the first cost, lifecycle cost and footprint of the installation.

"Businesses are constantly seeking ways to enhance their core processes and become

more efficient while simultaneously improving their bottom line," said Jim Crouse, Executive Vice President of Sales and Marketing at Capstone Turbine. "Capstone microturbines are the ideal solution, helping businesses achieve energy independence by providing reliable, efficient, and clean power at a lower cost than the local utility," added Crouse.

About Capstone Turbine Corporation

Capstone Turbine Corporation (www.capstoneturbine.com) (Nasdaq:CPST) is the world's leading producer of low-emission microturbine systems and was the first to market commercially viable microturbine energy products. Capstone Turbine has shipped approximately 7,000 Capstone Microturbine systems to customers worldwide. These award-winning systems have logged millions of documented runtime operating hours. Capstone Turbine is a member of the U.S. Environmental Protection Agency's Combined Heat and Power Partnership, which is committed to improving the efficiency of the nation's energy infrastructure and reducing emissions of pollutants and greenhouse gases. A UL-Certified ISO 9001:2008 and ISO 14001:2004 certified company, Capstone is headquartered in the Los Angeles area with sales and/or service centers in the New York Metro Area, United Kingdom, Mexico City, Shanghai and Singapore.
