Investor Presentation

Pioneering Differentiated Radiotherapies for Patients with Unmet Needs

April 2026

ATNM: NYSE AMERICAN

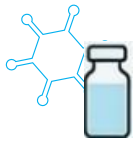
Disclaimer and Safe Harbor

The information presented herein contains express and implied forward-looking statements regarding the current intentions, expectations, estimates, opinions and beliefs of Actinium Pharmaceuticals, Inc. (“Actinium”) that are not historical facts. These forward-looking statements include statements regarding Actinium’s expectations for its product candidates (including their therapeutic and commercial potential, anticipated future development activities, anticipated timing of development activities, including initiation of clinical trials and presentations of clinical data and the indications Actinium and its collaborators plan to pursue), future results of operations and financial position, business strategy, strategic collaborations, any royalty or milestone payments and Actinium’s ability to obtain and maintain intellectual property protection for its product candidates. Such forward-looking statements may be identified by words such as “believes”, “may”, “will”, “expects”, “endeavors”, “anticipates”, “intends”, “plans”, “estimates”, “projects”, “should”, “objective” and variations of such words and similar words. These statements are based on management’s current expectations and are subject to risks and uncertainties that may cause actual results to differ materially from the anticipated or estimated future results, including the risks and uncertainties associated with preliminary study results varying from final results, estimates of potential markets for drugs under development, clinical trials, actions by the FDA and other governmental agencies, regulatory clearances, responses to regulatory matters, the market demand for and acceptance of Actinium’s products and services, performance of clinical research organizations and other risks detailed from time to time in Actinium's filings with the Securities and Exchange Commission (the “SEC”), including without limitation its most recent annual report on Form 10-K, subsequent quarterly reports on Forms 10-Q and Forms 8-K, each as amended and supplemented from time to time.

Any forward-looking statements that Actinium makes in this presentation speak only as of the date of this presentation. Except as required by law, Actinium assumes no obligation to update its forward-looking statements whether as a result of new information, future events or otherwise, after the date hereof. Nothing contained in this presentation is, or should be construed as, a recommendation, promise or representation by Actinium or any director, employee, agent, or adviser of Actinium. This presentation does not purport to be all-inclusive or to contain all of the information you may desire. The content of this presentation is subject to copyright, which will be asserted by Actinium, and no part of this presentation may be reproduced, stored in a retrieval system, or transmitted in any form or by any means without prior permission in writing from Actinium.

Investment Thesis: Differentiated Radio Pipeline with Strong Momentum

Novel multi-asset portfolio at an inflection point with several key data readouts in 2026 supported by strong balance sheet providing runway into 2028



2 Pan-Tumor Blockbuster Solid Tumor Opportunities

ATNM-400: First-in-class pan-tumor asset supported by compelling preclinical data in mCRPC, NSCLC & Breast Cancer

Actimab-A (MDSC): Potential to unlock the power of immunotherapy by depleting MDSCs in solid tumors

De-risked Partner Ready Hematology and Conditioning Franchise with 2 Phase 2/3 Assets

Late-stage (Phase 2/3 ready) Actimab-A and Iomab-B can address the entire AML treatment journey and Iomab-ACT has the potential to be a universal conditioning agent for cell and gene therapies, representing a near-term value opportunity

Uniquely Positioned Radiotherapies with Novel, First-in-Class Therapies

Poised to fill the innovation gap in the radiopharmaceutical sector, where patients' needs and big pharmas' appetite require innovation beyond PSMA, SSTR and FAP

Robust Capabilities, Platform and Near-Term Catalysts

Supported by deep R&D expertise, expanding in-house manufacturing capabilities (operational 2H:26), robust IP approximately 250 patents including Ac-225 production technology and a cascade of significant data readouts expected in 2026

Strong Financial Position & Clean Capital Structure

Cash runway into 2028 ($48.0 million in cash and cash equivalents as of December 31, 2025), 31.4 million shares outstanding with no debt, warrants or preferred stock outstanding

Radiopharma Landscape: A Strategic Void Awaits Differentiated Assets

6 Big Pharma's

with an acquired radiotherapy presence

3 Targets

Dominate industry pipeline (PSMA, SSTR2 & FAP)

$17 Billion

In high value M&A on late-stage assets and infrastructure

300,000+

Sq. feet of underutilized radio mfg. infrastructure

The radio landscape features largely undifferentiated programs by **50+ smaller companies** and **6 Big Pharma players**
A wave of M&A has left them with large infrastructure but sparse pipelines, creating an urgent need for truly novel assets

$10+ Billion
in investments focused on novelty & differentiation in 2024 – 2026 YTD

Bristol Myers Squibb · Lilly · sanofi · NOVARTIS · REGENERON

- **$2.7 B** Peptide platform — PeptiDream
- **$1.75 B** DLL3 & B7-H3 & platform — mariana ONCOLOGY
- **$1.1 B** Miniprotein platform — AKTIS ONCOLOGY
- **$1.1 B** GCPR program — Radionetics Oncology
- **$0.65 B** PB-212 platform — oranomed
- **$1.35 B** ACP3 prostate program — Philochem innovating chemistry
- **$2.1 B** Radiopharm platform — Telix

NETs = Neuroendocrine Tumors, PSMA = Prostate Specific Membrane Antigen. FAP = Fibroblast Activation Protein. Transaction values and manufacturing square footage via SEC filings and company press releases. Transaction values include total potential deal values.

Actinium is Well Positioned in the Current Radio Landscape

A Transformative Pipeline Across Three High Value Pillars

Pillar	Program	Differentiation & Indication	Stage of Development
			Preclinical · Phase 1 · Phase 2 · Phase 3
Solid Tumors — Growth & Value Driver	**ATNM-400 (Undisclosed Target)**	First-in-Class Ac-225 Program Targeting mCRPC, NSCLC & Breast Cancer	
	Actimab-A MDSC	Combinations with PD-1 Inhibitors to Overcome Resistance in MDSC-Rich Solid Tumors	
	Undisclosed Targets/Theranostics	Novel Solid Tumor Programs	
Hematology — Value Now/ Partner Ready	**Actimab-A + CLAG-M**	Mutation Agnostic Backbone Therapy for Fit R/R AML	**Seeking collaborator**
	Actimab-A Triplet Combo	Mutation Agnostic Backbone Therapy for Frontline AML	
	Actimab-A Monotherapy	Address Unmet Needs of High-risk HMA refractory MDS	
	Actimab-A Combinations *(FLT3, IDH 1/2, Menin)*	Novel Combinations for Frontline, R/R & Maintenance – AML/MDS	
Conditioning — Future of Cell & Gene Tx	**Iomab-ACT Commercial CAR-T**	Universal Conditioning to Improve Patient Access & Outcomes	
	Iomab-ACT BMT / GeneTx	Targeted Non-Chemotherapy Conditioning to Unlock Curative Therapies	
	Iomab-B BMT	Conditioning for Broad Active R/R AML Patient Population	**Seeking partner**

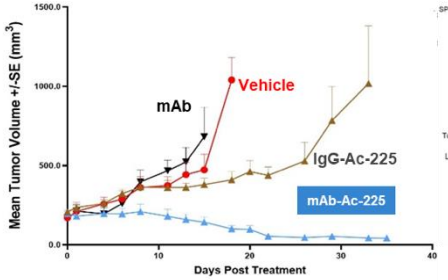
Actinium Pharmaceuticals — We Nuke Cancer

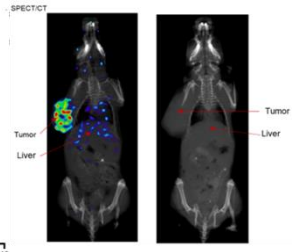
Innovation Focused R&D & Manufacturing Capabilities To Drive Value

Demonstrated ability to generate novel and highly differentiated radiotherapy programs as evidenced by our highly innovative pipeline

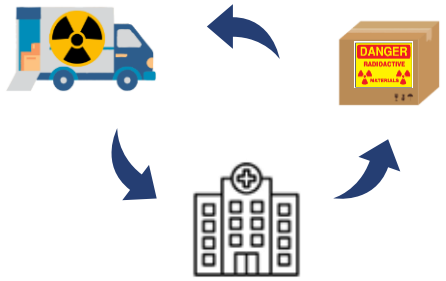
Strong In-house R&D to be Complemented by RLT Manufacturing 2H:26

Demonstrated Leading-Edge Preclinical Radiochemistry & Translational Biology

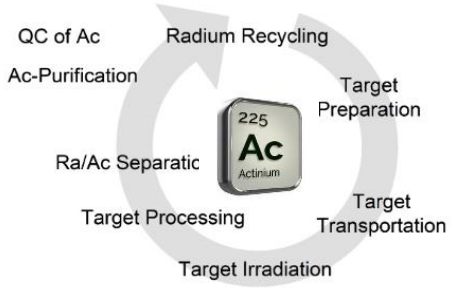




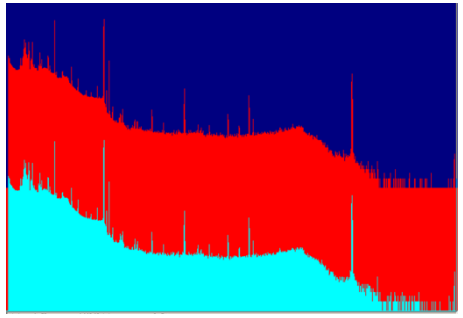
End-to-end Supply Chain Established at ~50 leading Hospitals & Redundant Isotope Supply



Proprietary Cyclotron Manufacturing Technology Enables Commercial-Scale, Low-Cost AC-225 Production



Radiochemical Purity Equivalent to Gold-Standard Thorium Method & No Long-Lived Contaminants

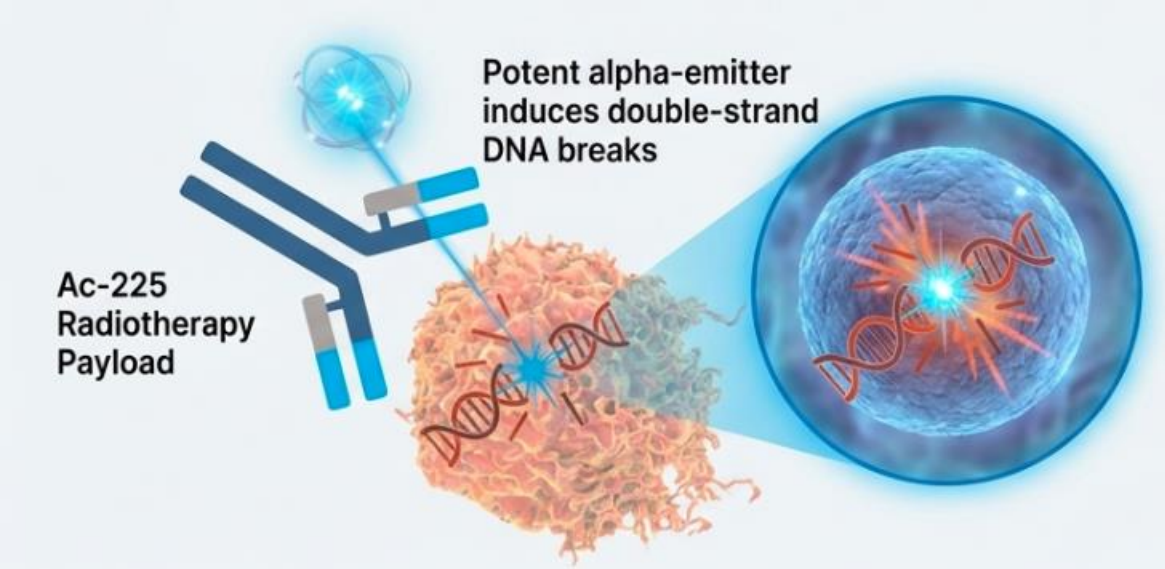


Solid Tumors: ATNM-400 & Actimab-A

ATNM-400: First-in-class, multi-indication Ac-225 targeted radiotherapy supported by robust preclinical data in mCRPC, NSCLC & Breast Cancer

Actimab-A: Potential to synergize with PD-1 and other immune checkpoint inhibitors in solid tumors by depleting CD33+ MDSCs

ATNM-400: Differentiated Radiotherapy Targeting 3 Blockbuster Indications



- **Target implicated in disease biology & treatment resistance**
- **Pan-tumor potential: target expressed across multiple solid tumor indications**
- **Theranostic approach with Zr-89 for imaging and Ac-225 for therapy**

Prostate Cancer (~300K U.S. patients)

- Non-PSMA target differentiates from Pluvicto, addresses non-responders/relapses and shows synergy with ARPIs for earlier line therapy

Lung Cancer (~200K U.S. patients)

- Target is highly expressed in EGFR NSCLC and increases in resistant disease, outperformed 1st, 2nd and 3rd line EGFR therapies and synergistic with 1st line TAGRISSO

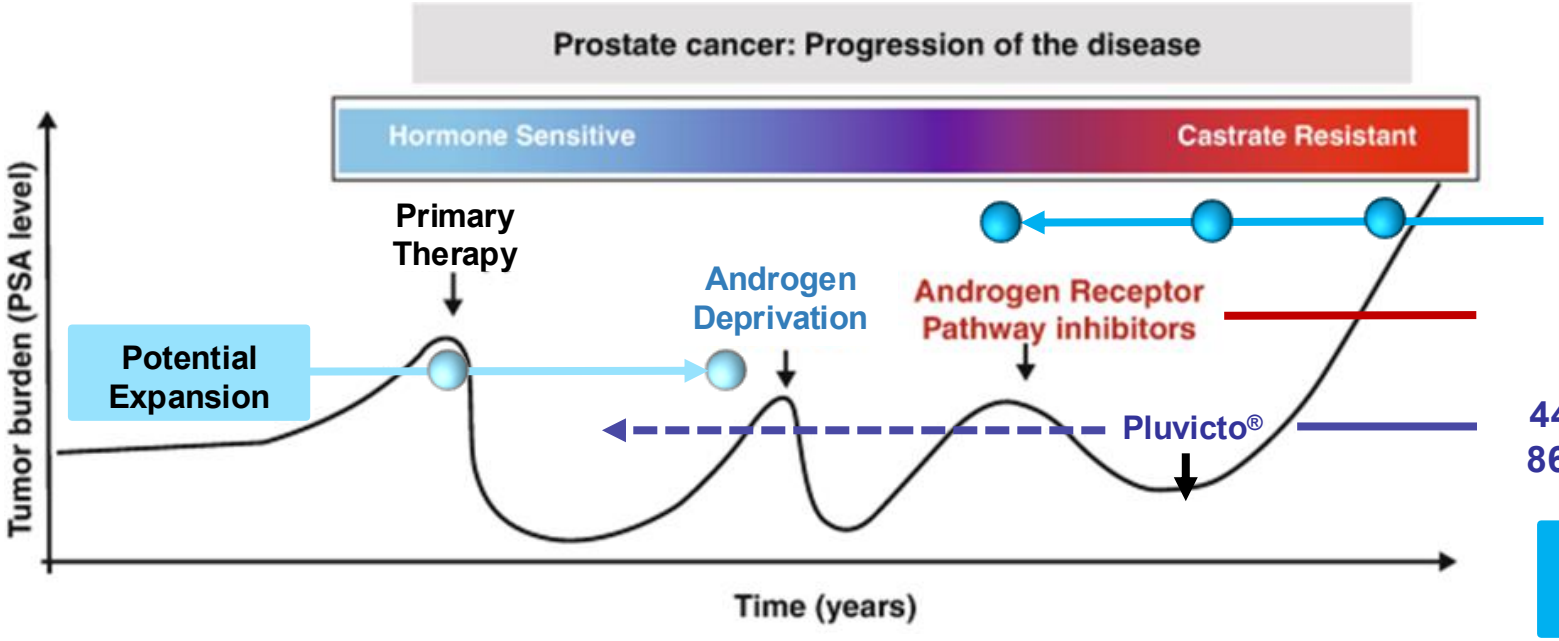
Breast Cancer (~300K U.S. patients)

- Robust Efficacy in HR+, TNBC and HER2- resistant models with the potential to avoid toxicities like ILD seen with ADCs

Sources: 1) American Cancer Society and Actinium Pharmaceuticals, Inc. research 2) Reversible epigenetic alterations mediate PSMA expression heterogeneity in advanced metastatic prostate cancer. Sayer et al. Journal of Clinical Insights. February 2023 https://doi.org/10.1172/jci.insight.162907.

Blockbuster Market Opportunity for ATNM-400 in Prostate Cancer

Multiple near-term opportunities in non-responders and progressors with future expansion to earlier lines of treatment



ATNM-400 Can Address Broad mCRPC Population

40 – 60K patients fail ARPI therapy[1]

44K Pluvicto® eligible patients[2]
86.5K pts with label expansion[2]

ATNM:400: 100,000+ Patient Opportunity[3]

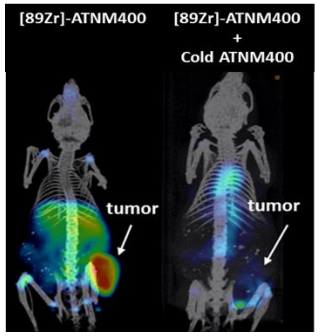
ATNM-400 Addresses Blockbuster Segments of MCRPC : ARPIs: $10+ billion | Pluvicto®: $2.0 billion[4]

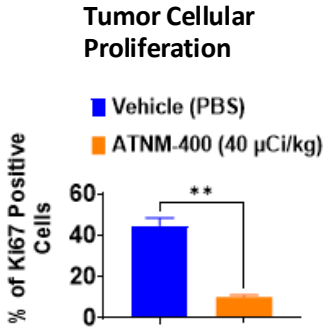
1) Beer et al. Enzalutamide in Metastatic Prostate Cancer before Chemotherapy. New England Journal of Medicine. 2014 Volume 371 No. 5 :424-433 2) Novartis 2025 Company Reports. 3) Actinium Pharmaceuticals, Inc. company estimates 4) Astellas, Pfizer and Novartis 2025 Annual Reports

Transformative Therapeutic Potential of ATNM-400 for Prostate Cancer

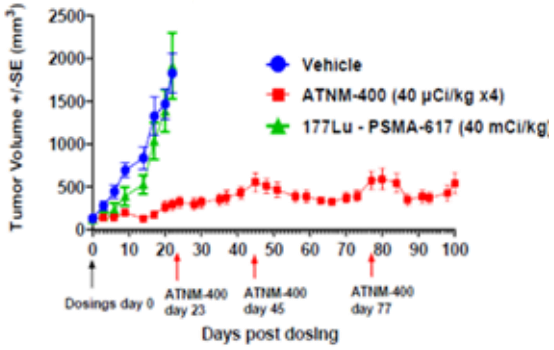
Robust in vivo data show ATNM-400 achieves specific tumor uptake, decreased tumor cell proliferation, and superior efficacy versus 177Lu-PSMA-617, active agent in blockbuster radiotherapy Pluvicto® and next-generation 225Ac-PSMA-617

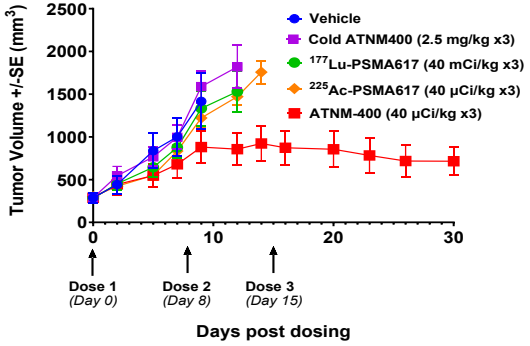
Specific Tumor Uptake & Decreased Cell Proliferation

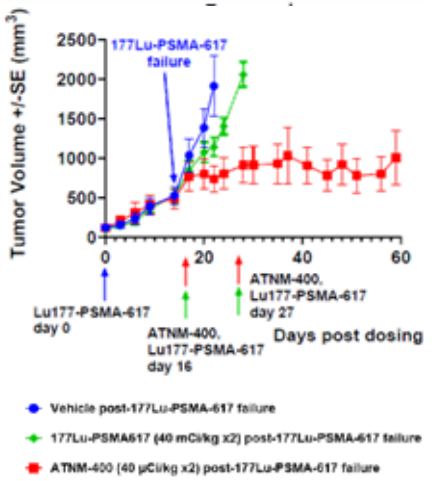




Greater Efficacy Than 177Lu-PSMA-617 and 225Ac-PSMA-617 in 22Rv1 PSMA-Low Prostate Cancer Model; Overcomes Resistance







Target Considerations	ATNM-400	PSMA
Implicated in prostate cancer cell survival	✓	✗
Linked to rapid disease progression	✓	✗
Drives shorter time to castration resistance	✓	✗
Expressed in multiple solid tumors	✓	✗

- **30% mCRPC patients have low or no PSMA expression**
- **Up to 70% patients do not respond**
- **Nearly all patients progress on Pluvicto® in <12-mos**

ATNM-400, a first-in-class Actinium-225 antibody radioconjugate, demonstrates potent anti-tumor activity and overcomes resistance to enzalutamide and 177Lu-PSMA-617 in prostate cancer models Human prostate cancer. Chin et al. Prostate Cancer Foundation Scientific Retreat 2025. 22Rv1 tumor xenografts. Models consisted of human prostate cancer 22Rv1 tumor xenografts. 22Rv1 is resistant to Lu177-PSMA-617 and ARPI enzalutamide.

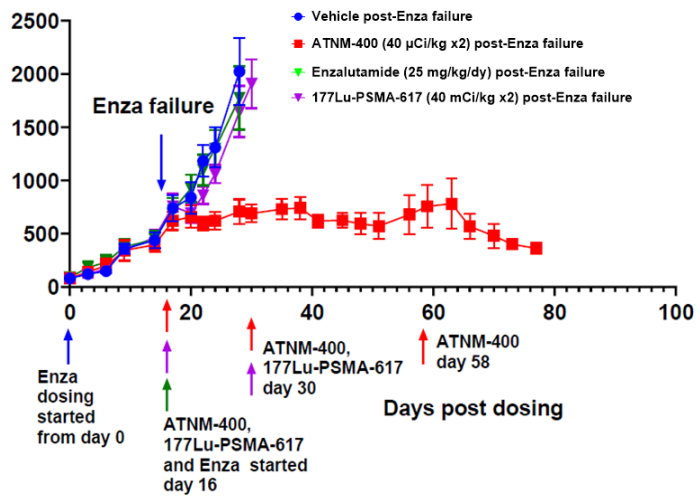
Greater Efficacy and Synergy with ARPIs Supports Large Market

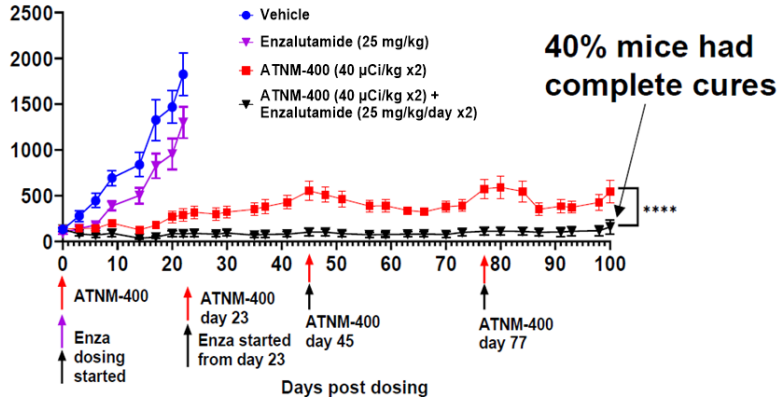
Mechanistic rationale and data supports potential of ATNM-400 in earlier line mCRPC as a monotherapy or in combination

Mechanistic Synergy Supports Positive Results

- Enzalutamide resistance increases ATNM-400 target expression in prostate cancer models and mCRPC patients
- This provides a mechanistic rationale for the strong combination activity observed with ATNM-400 and ARPI enzalutamide

Superior to Enzalutamide and 177Lu-PSMA-617 in ARPI-Resistant Prostate Cancer and Strong Combination Activity with Durable Efficacy





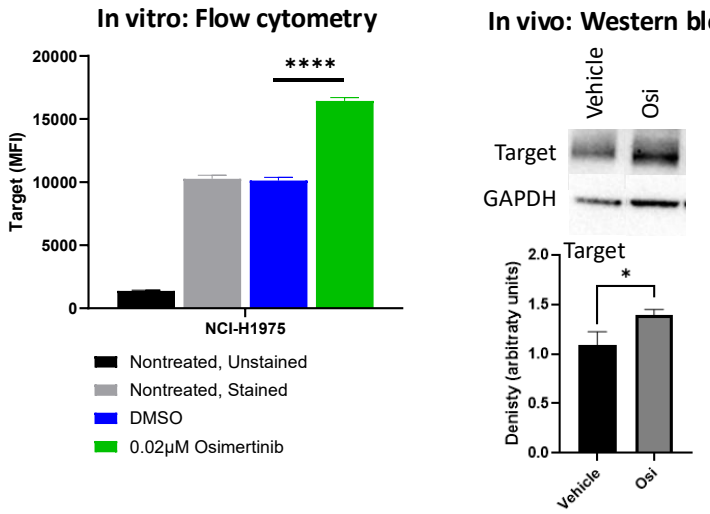
Up to 60,000 patients fail ARPI therapy and ~35% fail treatment in less than 12-months

ATNM-400, a first-in-class Actinium-225 antibody radioconjugate, demonstrates potent anti-tumor activity and overcomes resistance to enzalutamide and 177Lu-PSMA-617 in prostate cancer models Human prostate cancer. Chin et al. Prostate Cancer Foundation Scientific Retreat 2025. 22Rv1 tumor xenografts. Models consisted of human prostate cancer 22Rv1 tumor xenografts. 22Rv1 is resistant to Lu177-PSMA-617 and ARPI enzalutamide.

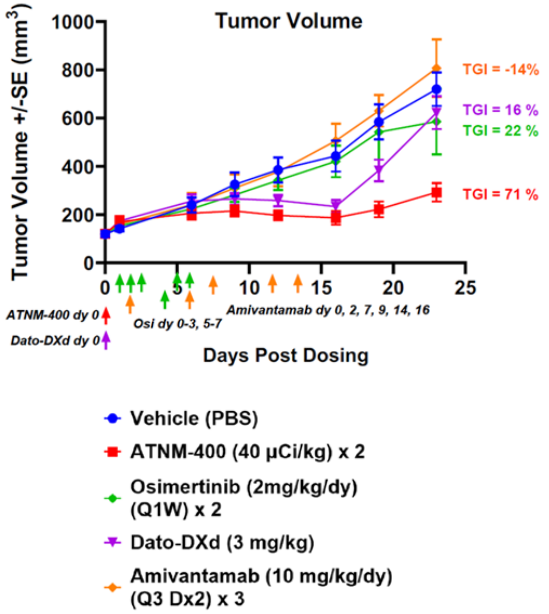
Significant Market Expansion Opportunity Across NSCLC

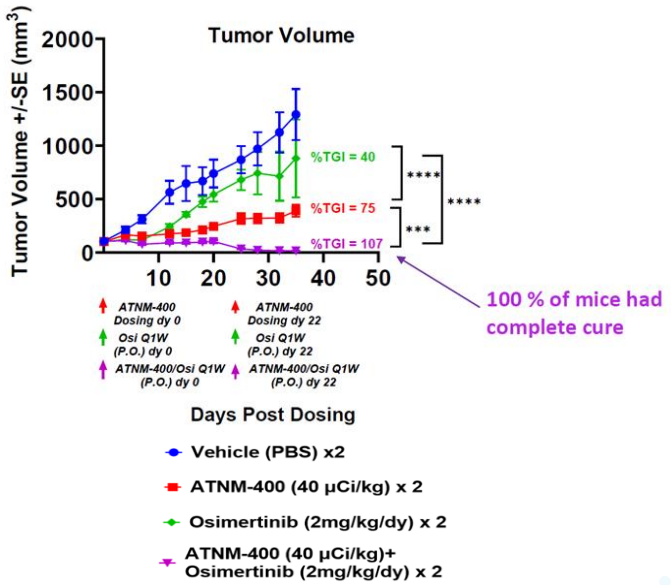
ATNM-400 outperformed 1st, 2nd & 3rd line approved therapies for EGFR-mutant NSCLC by 3-5x and had robust synergy in combination with 1st line osimertinib that is supported by clinical data with EBRT

Osimertinib treatment increases ATNM-400 target expression both in vitro and in vivo



ATNM-400 had 3-5x greater tumor growth inhibition vs approved EGFR therapies and 100% cures with osimertinib combination





Clinical rationale: EBRT + osimertinib Improved PFS vs. osimertinib (32.2 vs 20 months)

Ac-225 is 4-8× more biologically lethal than EBRT and could drive superior efficacy, reduced toxicity, and access to earlier-line treatment segments

ATNM-400, a first-in-class Actinium-225 antibody radioconjugate, has superior anti-tumor activity compared to approved drugs (Osimertinib, Dato-DXd, and Amivantamab) in EGFR-mutant lung cancer preclinical models. Patel et al. AACR-NCI-EORTC International Conference on Molecular Targets and Cancer Therapeutics 2025. NCI-H1975 human lung cancer models with L885R and T790M EGFR mutations. 1) Sampath et al. Osimertinib plus consolidative radiotherapy for advanced *EGFR* mutant non-small cell lung cancer: a multicenter, single-arm, phase 2 trial. The Lancet eClinicalMedicine, Volume 87, 103435. https://www.thelancet.com/journals/eclinm/article/PIIS2589-5370(25)00367-0/fulltext.EBRT = external beam radiotherapy

Compelling Efficacy Across All EGFR-Mutant NSCLC Treatment Settings

Results Strongly Support ATNM-400's Differentiated Profile in the Highly Competitive NSCLC Space and Potential Across 1st, 2nd & 3rd Line Settings, Alone or In Combination with Successful Therapies Competing for Market Share

- ATNM-400's target antigen is overexpressed in NSCLC, associated with poor prognosis and linked to treatment resistance
- NSCLC accounts for ~85% of the 2+ million lung cancer cases globally
- AstraZeneca and Johnson & Johnson are competing for market share with TAGRISSO® and RYBREVANT® combinations
- ATNM-400 offers a novel EGFR + radiotherapy combination supported by preclinical and clinical data

	EGFR - 1st Line	EGFR - 2nd Line	EGFR - 3rd Line
ATNM-400[1] Efficacy	✓ 3x Superior TGI ✓ Synergy in combination	✓ 5x Superior TGI	✓ 85% greater TGI
Therapy & Mechanism	TAGRISSO® osimertinib EGFR-TKI	DATROWAY® Dato-DXd Trop-2 ADC	RYBREVANT® amivantamab EGFR-cMET Bispecific
Company	AstraZeneca (AZ)	Daiichi Sankyo/AZ	J&J
Radiotherapy Presence	**Yes - Prostate Cancer**	**Yes - Prostate Cancer**	**Yes - Prostate Cancer**

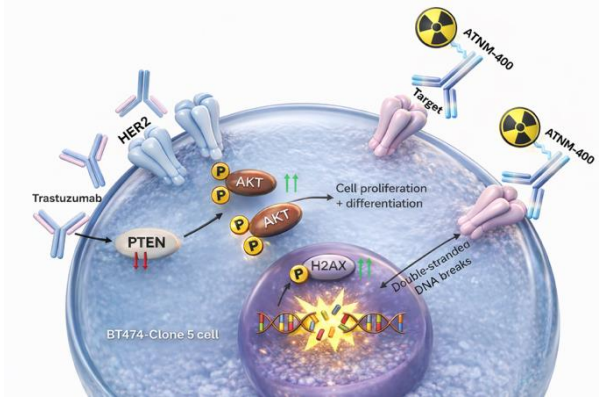
Actinium Pharmaceuticals
We Nuke Cancer

1) ATNM-400, a first-in-class Actinium-225 antibody radioconjugate, has superior anti-tumor activity compared to approved drugs (Osimertinib, Dato-DXd, and Amivantamab) in EGFR-mutant lung cancer preclinical models. Patel et al. AACR-NCI-EORTC International Conference on Molecular Targets and Cancer Therapeutics 2025. NCI-H1975 human lung cancer models with L885R and T790M EGFR mutations. 2) Studies vs control and not K-Ras inhibitors

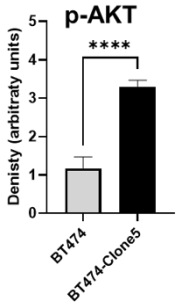
Broad Potential Demonstrated Across Multiple Breast Cancer Settings

ATNM-400's target antigen is overexpressed in breast cancer including tumors resistant to endocrine therapies such as tamoxifen and HER2 targeted therapies like Herceptin® as well as in TNBC

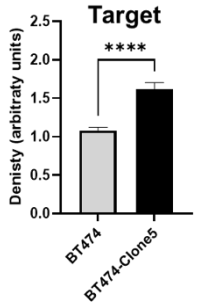
HER2 Therapy Resistance Increases Survival Pathway via p-AKT & ATNM-400 Target Expression



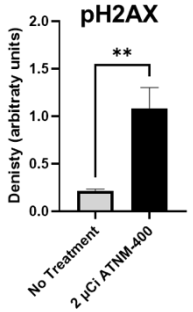
HER2 Resistance Marker



ATNM-400 Target Expression

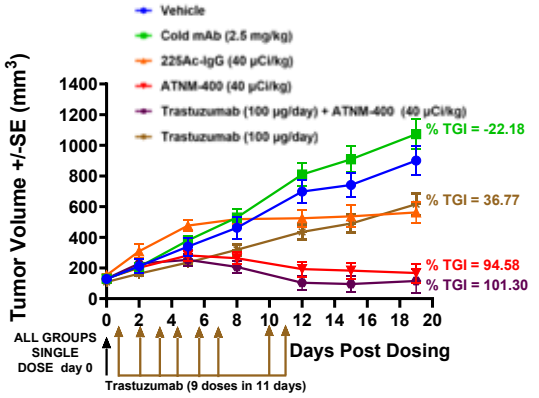


Double-Strand DNA Break Marker

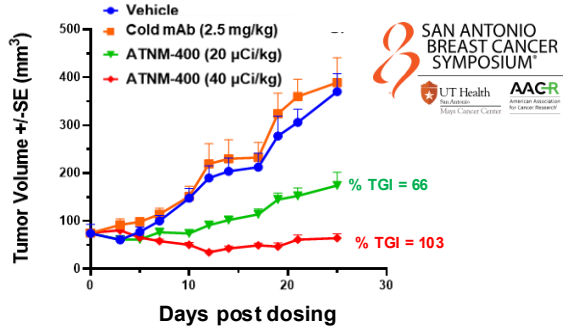


Monotherapy and Combinations Eradicates Trastuzumab-Resistant Tumors and Triple-Negative Breast Cancer (TNBC)

Trastuzumab-resistant model BT474-Clone5



TNBC model MDA-MB-468



- Robust efficacy and tumor regression as monotherapy and in combination with trastuzumab (Herceptin®) in trastuzumab-resistant and TNBC models
- Herceptin® (Roche) and biosimilars generated sales of over $5 billion in 2025[1]
- Off-target toxicities like ILD with 2L therapies (HER2 or Trop-2 ADCs) restricts use
- ATNM-400 represents a novel therapeutic approach to address the high unmet needs in HR+, HER2- and TNBC as a monotherapy or in combinations

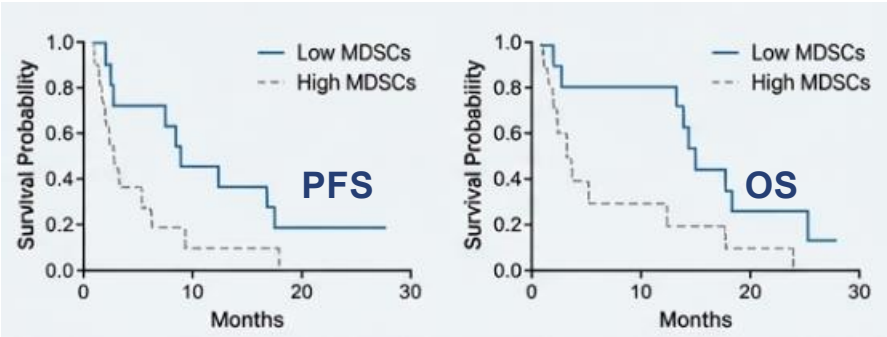
Actinium Pharmaceuticals
We Nuke Cancer

Anti-Tumor Activity of ATNM-400, a First-in-class Actinium-225 Antibody Radioconjugate, in Hormone-Positive, Triple-Negative, Tamoxifen-Resistant and Trastuzumab-Resistant Breast Cancer Models. Bardia et al. San Antonio Breast Cancer Symposium 2025. BT474-Clone5 breast cancer model is HER2 inhibitor trastuzumab-resistant. ILD - interstitial lung disease. ADC - antibody drug conjugate. p-AKT is a biomarker correlated with trastuzumab-resistance in breast cancer. p-H2AX is a marker of double-stranded DNA damage.
1) Per Data Insights Market

Actimab-A: Tap Into the Blockbuster PD-1 Market By Depleting MDSCs

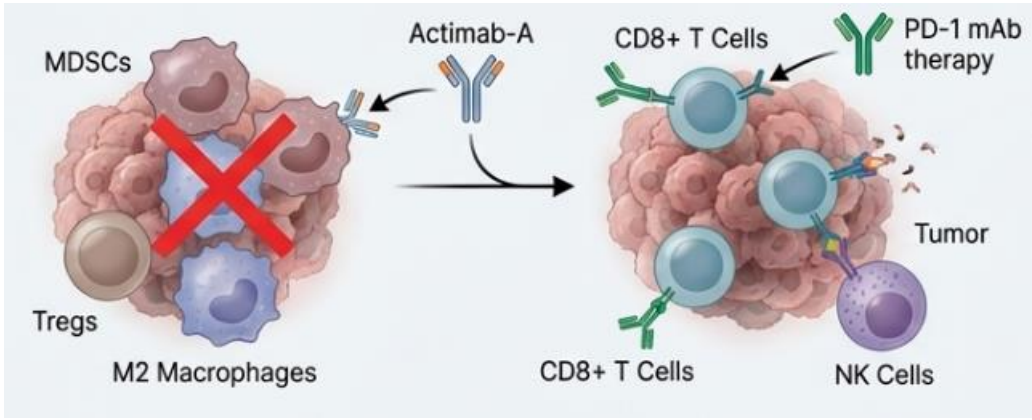
Actimab-A can be synergistic with PD-1 inhibitors by depleting MDSCs, an immune cell subtype implicated in poor response and outcomes to PD-1 inhibitors, potentially opening and expanding a $40+ billion market

Clinical Data Shows High MDSCs Lead to PD-1 Treatment Failure[1]



Outcomes	Low MDSCs	High MDSCs
PFS	8.39 months	1.94 months
OS	15.15 months	3.03 months

CD33+ MDSCs are Primed for Depletion with Actimab-A = ⬆ T-cell Proliferation



The Opportunity

Re-sensitize/Extend Responses

Enhance outcomes in the existing $40 billion PD-1 approved market (Lung, melanoma, etc.) and potential for new IP

Sensitize/Expand Indications

Open new markets for tumors with limited PD-1 response (Pancreatic, Prostate, Ovarian, etc.), representing 400,000+ patients annually

1) Bronte et al. High Levels of Circulating Monocytic Myeloid-Derived Suppressive-Like Cells Are Associated With the Primary Resistance to Immune Checkpoint Inhibitors in Advanced Non-Small Cell Lung Cancer: An Exploratory Analysis https://pmc.ncbi.nlm.nih.gov/articles/PMC9043492/. Frontiers in Immunology. 2022 Apr 13;13:866561

Actimab-A MDSC PD-1 Basket Trial: Data Expected 2H:2026

Trial supported by compelling preclinical data and mechanistic synergy will enroll patients across 4 tumor types

Patient Population:

- R/R locally advanced metastatic HNSCC, NSCLC, GBM and Colorectal Cancer* (MDSC rich tumor types)
- No prior checkpoint inhibitor therapy
- Adults ≥18 years
- PD-1/L1 expression

KEYTRUDA® (pembrolizumab) Injection 100 mg / OPDIVO® (nivolumab)

+ Actimab-A

Real World Data Comparator

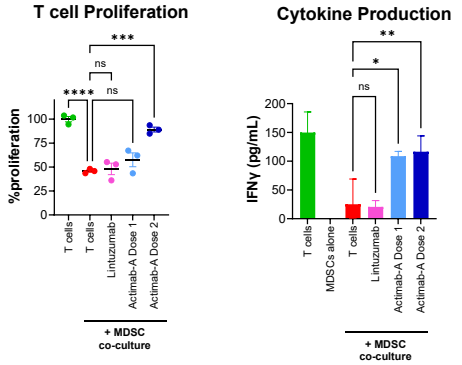
Endpoints:

- Evaluate Safety, tolerability of Actimab-A with Keytruda® or OPDIVO®
- Evaluate ORR, PFS and OS

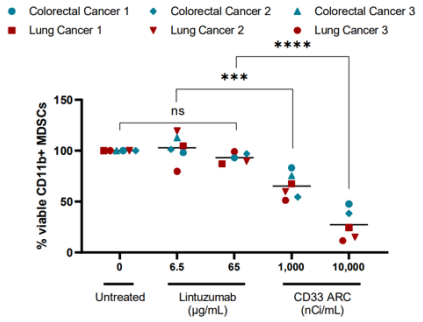
Biomarkers:

- Evaluate pattern of depletion of CD33+ MDSCs in TME & Peripheral Blood
- T-Cell activity in Peripheral Blood

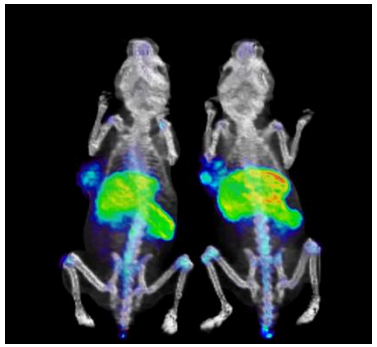
Actimab-A targeting of MDSCs rescues T cell response *ex vivo*[1]

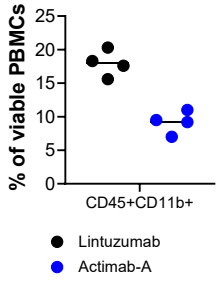


Actimab-A is cytotoxic to patient-derived MDSCs *ex vivo*[1]



Actimab-A homes to tumor-resident MDSCs and depletes MDSCs in vivo[1]





1)) Chin et al. Targeting Myeloid-Derived Suppressor Cells with Actinium-225 Lintuzumab, a CD33 Antibody Radioconjugate to Enhance Antitumor Immunity. Abstract 4221. ASH 2023 Annual Meeting * High-MSI colorectal cancer

Hematology Portfolio: AML Therapeutics & Targeted Conditioning

Actimab-A: Phase 2/3 ready, mutation agnostic Ac-225 AML therapy

Iomab-B: Phase 2/3 ready BMT targeted conditioning agent

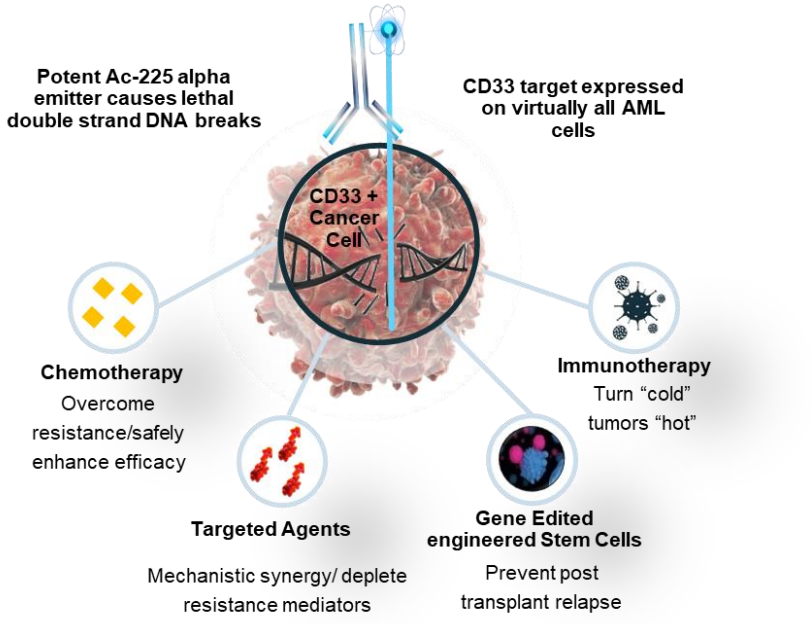
Iomab-ACT: Potential universal conditioning to improve access and outcomes for cell & gene therapies

A De-Risked, Late-Stage Hematology Franchise Ready for Partnership

Only CD33 and CD45 targeting clinical stage radiotherapies supported by strong data and Actimab-A NCI CRADA

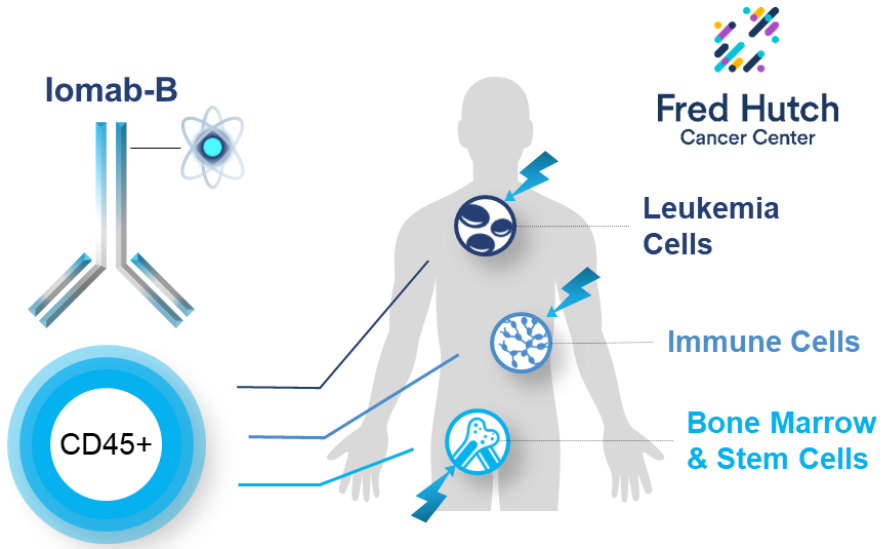
Actimab-A: AML & MDS Therapeutics

- Mutation agnostic Ac-225 backbone therapy with strong data in high-risk patients
- Aligned with FDA on Phase 2/3 trial for Actimab-A + CLAG-M in R/R AML. **Actively seeking collaborator**
- NCI CRADA supports broad development in cost effective manner



Iomab-B/ACT: Targeted Conditioning

- CD45 targeted radiotherapy designed to improve access and outcomes to BMT, Cell & Gene Therapies
- Aligned with FDA on Phase 2/3 trial in expanded R/R AML patient population. **Actively seeking partner**
- 3 active trials for Iomab-ACT for cell & gene therapy



Potential to Transform the AML & MDS Treatment Journey

Late-stage differentiated radio assets have strong synergy with favorable commercial dynamics and can address the unmet needs of 110,000 patients in the U.S. and EU

Iomab-B BMT Conditioning: R/R AML	Phase 2/3
Actimab-A + CLAG-M: R/R AML	Phase 2/3
Actimab-A Triplet Combo: Frontline AML	Phase 1
Actimab-A Monotherapy: High-risk MDS	Phase 1
Actimab-A Combinations *(FLT3, IDH 1/2 & Menin inhibitors)*	Planned
Actimab-A: AML & MDS Maintenance	Planned

Medical College of Wisconsin · Otsuka Taiho Oncology — Making the human connection · NIH National Cancer Institute

Indication	Therapy Front Line	Therapy R/R	BMT Conditioning	Post-BMT Maintenance
AML: 88K pts	●	●	●	●
MDS: 23K pts	Potential Expansion	●	Potential Expansion	Potential Expansion

Key Value Drivers

- ✓ **Clinical Validation**: Over 500 patients treated with Iomab-B
- ✓ **Concentrated Commercial Market**: Patient population largely treated in top 100 quaternary care centers in U.S. & EU
- ✓ **Favorable Commercial Dynamics**: Strong synergy across Actimab-A, Iomab-B and Iomab-ACT
- ✓ **Unmet Medical Need:** Provides opportunity for commercial success with the only radiotherapies in development for these blockbuster markets

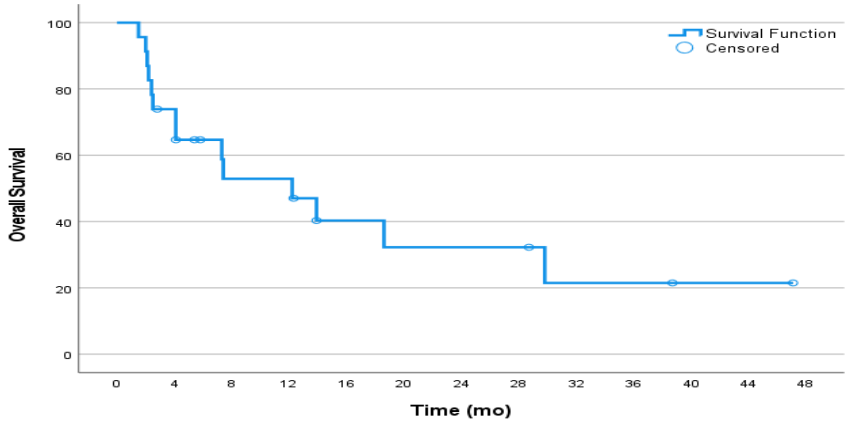
CancerMPact AML Treatment Architecture EU5 2022 4. O. Visser et al, Incidence, survival and prevalence of myeloid malignancies in Europe, 2012; RARECARE 5. Competitor data 6. *High Risk MDS patient population includes select Intermediate Risk patients
7. Leukemia & Lymphoma society Facts & Statistic

Actimab-A + CLAG-M: Results Support Phase 2/3 Trial in R/R AML

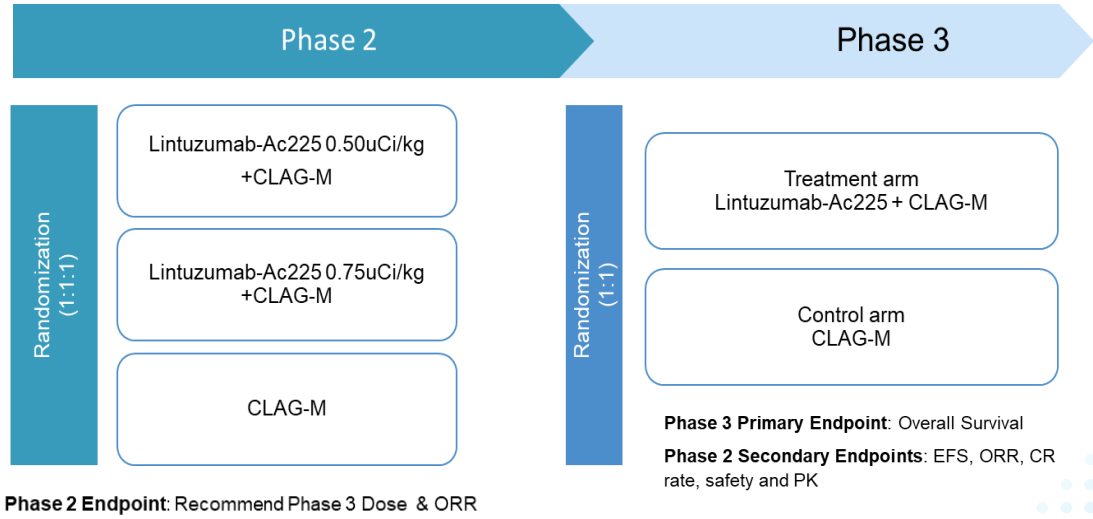
High Rates of MRD Negativity and Improved Survival Outcomes in High-Risk R/R Patients[1]



Patient segment	MRD Negativity	Median Overall Survival
1st/2nd Salvage (n=14)	80%	18.4 mo.
TP53mut (n=13)	83%	9.6 mo.
Prior Venetoclax (n=13)	100%	7.3 mo.

Phase 2/3 Trial to Enroll Patients with 1st or 2nd Salvage R/R AML, Group Had Best Outcomes in Phase 1b Trial

- 24-month median overall survival in the 70% of patients who proceeded to a BMT with Actimab-A + CLAG-M
- Results compare highly favorably to <2 mo. – 4 mo. overall survival in TP53+ or prior Venetoclax treated patients[2,3]



Phase 2 Endpoint: Recommend Phase 3 Dose & ORR

Phase 3 Primary Endpoint: Overall Survival

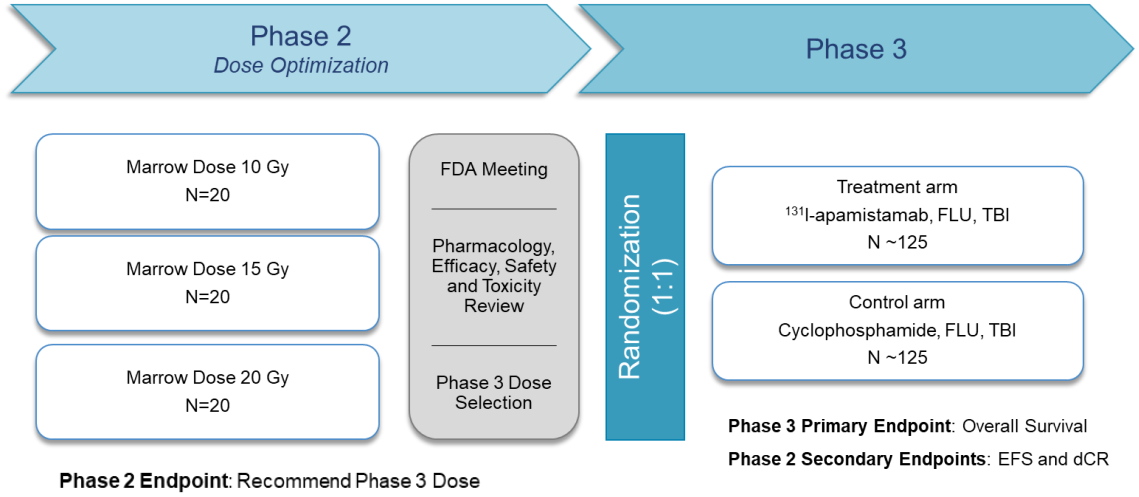
Phase 2 Secondary Endpoints: EFS, ORR, CR rate, safety and PK

Aligned with FDA on Phase 2/3 trial, Actively seeking collaborator

1) Abedin et al. Phase 1 study of lintuzumab-Ac225 combined with CLAG-M salvage therapy in relapsed/refractory acute myeloid leukemia. Leukemia February 2025. 2) Maiti et al. Outcomes of relapsed or refractory acute myeloid leukemia after front-line hypomethylating agent and venetoclax regimens 3) Zucenka, A., et al. Outcomes of relapsed or refractory acute myeloid leukemia patients failing venetoclax-based salvage therapies. Eur J Haematol. 2020; 106: 105– 1133)

Iomab-B: Phase 2/3 Trial Ready for Initiation and Partnering

FDA Aligned on Trial in Expanded Patient Population to Include All R/R AML Patients age 18+, Potential Future Market Expansion Supported by Data in 5 Additional Disease Indications



Long-lived IP:

- Composition of matter patents extend to 2038

Strong Existing Use Base:

- 24 SIERRA sites continue to have strong interest in Iomab-B

Regulatory Clarity:

- Potential to leverage Phase 2 results with SIERRA data

Market Opportunity:

- ~ 150,000 addressable patients across 6 indications via improved BMT conditioning

Robust and compelling clinical data supports near-term opportunity in r/r AML and indication expansion

- 400+ patients
- 12 clinical trials
- 6 diseases
- Improved survival and curative outcomes

Strong market awareness driven by 12 oral presentations at the most prestigious BMT, CAR-T hematology and nuclear medicine conferences

SIERRA trial supports Phase 2/3 in expanded population; Actively seeking partner

Actinium Pharmaceuticals
We Nuke Cancer

Iomab-ACT Further Expands Heme Portfolio Market Opportunity

Commercial CAR-T Phase 1B/2 Trial

Trial Initiated; Actively Recruiting → *Enrollment* **N** = 30 patients (single arm) → **Initial PoC Data:** Expected: 2026

PRIMARY OBJECTIVES

Safety, tolerability, and efficacy of Iomab-ACT conditioning with CAR-T

SECONDARY OBJECTIVES

Incidences of CRS, ICANS

In vivo persistence and expansion of CAR-T cells

UT Southwestern Medical Center

Farrukh Awan, MD
Professor of Internal Medicine

BMT & Gene Therapy Conditioning – Sickle Cell Disease BMT Phase 1 Trial

Trial Initiated; Actively Recruiting → *Enrollment* **N** = 24 patients → **Initial PoC Data** Expected: 2026

PRIMARY & SECONDARY OBJECTIVES

Safety assessment by evaluating graft failure, grades III-IV GvHD, or death at 100 days

Advance to gene therapy conditioning

Columbia University Herbert Irving Comprehensive Cancer Center

Markus Mapara, MD
Professor of Medicine

Early POC Data Expected 2H:2026 That Can Inform Registration Trials

2026 Outlook & Milestones

Transformational year with multiple first-in-class therapies reaching inflection points supporting our vision to be a leading fully-integrated targeted radiotherapy company

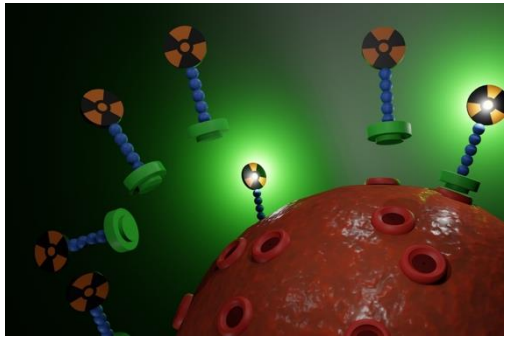
2026: A Year of Transformational Milestones and Data Readouts

ATNM-400	Mid:26	Initial tumor targeting and biodistribution data
	FY:26	Present additional preclinical data in mCRPC, NSCLC and Breast Cancer
Actimab-A (MDSCs)	2H:26	Initial Phase 1 data from MDSC basket trial
	2H:26	Multi-tumor Phase 1 data from MDSC basket trial
Hematology Franchise	2H:26	Secure partner, Initiate Actimab-A+CLAG-M Phase 2/3 trial in r/r AML
	FY:26	Advance Phase 1 frontline AML trial with Actimab-A triplet
	2H:26	Present mutation agnostic data from MSKCC collaboration
Iomab-B/ACT (Conditioning)	2H:26	Initial safety and engraftment data from SCD and commercial CAR-T trials
	2H:26	Advance to SCD gene therapy conditioning, explore collaborations
	2H:26	Additional clinical data from Iomab-ACT SCD and commercial CAR-T trials
	FY:26	Secure partner for Iomab-B Phase 2/3 Trial
RLT Infrastructure & Supply Chain	2H:26	Complete facility buildout
	2H:26	Supply first GMP clinical batch
	FY:26	Secure partnership to produce lower-cost Ac-225 leveraging proprietary cyclotron technology

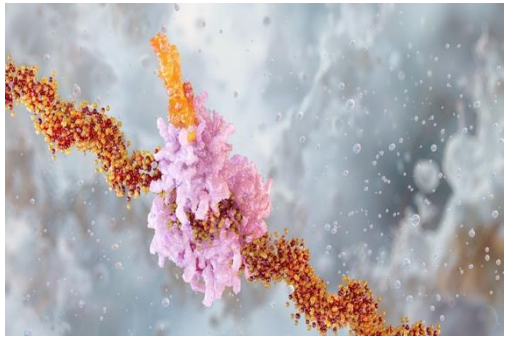
Actinium is Being Purpose Built to Fill Pharma's Strategic Gaps

Actinium is leveraging its extensive radiotherapy experience and expanding capabilities to develop novel therapies for high-value oncology indications

Radiochemistry Expertise and Know-how



Strong Translational Biology Capabilities



RLT Manufacturing, Ac-225 Production Technology & Supply Chain Capabilities*

Clinical Development & Trial Execution

Vision: Be a Leading Fully Integrated Radiopharmaceutical Company Developing Highly Differentiated, First-in-Class Targeted Radiotherapies

RLT manufacturing facility being built out and expected to be operational in 2H:2026
