# PharmaCyte Biotech to Present at H.C. Wainwright BioConnect Conference

LAS VEGAS--(BUSINESS WIRE)-- PharmaCyte Biotech, Inc. (NASDAQ: PMCB), a biotechnology company focused on developing cellular therapies for cancer and diabetes using its signature live-cell encapsulation technology, Cell-in-a-Box<sup>®</sup>, today announced that it will be featured as a presenting company at the H.C. Wainwright BioConnect Conference. The Conference is being held virtually on January 10-13, 2022.

During the presentation, the Chief Executive Officer of PharmaCyte Biotech, Kenneth L. Waggoner, will provide an overview of the Company's business and product pipeline.

Over 500 corporate presentations and panels are available on-demand from January 10-13, 2022. The pre-recorded presentation by PharmaCyte will be available on Monday, January 10, 2022, on the News & Media tab of PharmaCyte's website at <https://PharmaCyte.com/Media>.

PharmaCyte's presentation will also be available at <https://journey.ct.events/view/e3f318a9-38db-4326-8ec0-682398bf4a50>.

Additionally, PharmaCyte will be publishing a press release in the coming weeks to update its shareholders on the progress PharmaCyte has made to lift the clinical hold the U.S. Food and Drug Administration placed on PharmaCyte's planned Phase 2b clinical trial for the treatment of locally advanced, inoperable pancreatic cancer.

To learn more about PharmaCyte's pancreatic cancer treatment and how it works inside the body to treat locally advanced, inoperable pancreatic cancer, we encourage you to watch PharmaCyte's documentary video complete with medical animations at <https://www.PharmaCyte.com/Cancer>.

## About PharmaCyte Biotech

PharmaCyte Biotech, Inc. is a biotechnology company developing cellular therapies for cancer and diabetes based upon a proprietary cellulose-based live cell encapsulation technology known as "Cell-in-a-Box<sup>®</sup>." This technology is being used as a platform upon which therapies for several types of cancer and diabetes are being developed.

PharmaCyte's therapy for cancer involves encapsulating genetically engineered human cells that convert an inactive chemotherapy drug into its active or "cancer-killing" form. For pancreatic cancer, these encapsulated cells are implanted in the blood supply to the patient's tumor as close as possible to the site of the tumor. Once implanted, a chemotherapy drug that is normally activated in the liver (ifosfamide) is given intravenously at one-third the normal dose. The ifosfamide is carried by the circulatory system to where the encapsulated cells have been implanted. When the ifosfamide flows through pores in the capsules, the live cells inside act as a "bio-artificial liver" and activate the chemotherapy drug

at the site of the cancer. This “targeted chemotherapy” has proven effective and safe to use in past clinical trials and we believe results in little to no treatment related side effects.

PharmaCyte’s therapy for Type 1 diabetes and insulin-dependent Type 2 diabetes involves encapsulating a human cell line that has been genetically engineered to produce and release insulin in response to the levels of blood sugar in the human body. The encapsulation of the cell line will be done using the Cell-in-a-Box technology. Once the encapsulated cells are implanted in a diabetic patient, we anticipate that they will function as a “bio-artificial pancreas” for purposes of insulin production.
