Greenwich LifeSciences Announces Expansion of Flamingo-01 into Romania

STAFFORD, Texas, Aug. 13, 2025 (GLOBE NEWSWIRE) -- Greenwich LifeSciences, Inc. (Nasdaq: GLSI) (the "Company"), a clinical-stage biopharmaceutical company focused on its Phase III clinical trial, FLAMINGO-01, which is evaluating GLSI-100, an immunotherapy to prevent breast cancer recurrences, today announced the addition of clinical sites in Romania.

The Company's application to expand Flamingo-01 into Romania has been formally approved by European regulators, thus adding Romanian sites to the approximately 150 approved sites in Spain, France, Germany, Italy, Poland and the US. At present, there are approximately 123 actively enrolling sites globally.

According to the latest data collected by the European Cancer Information System (click here), a total of 12,861 new cases of breast cancer were diagnosed in Romania in 2022, which is the most common cancer diagnosed in women, representing approximately 28% of all cancers in women. Breast cancer is the leading cause of death from cancer in women in Romania with 3,877 deaths in 2022.

The Company is collaborating with Dr. Nicoleta Antone, who is leading one of the largest academic breast cancer focused centers in Cluj Napoca, Romania, and her colleagues from at least 3 other sites in Romania. The Romanian clinical sites will be listed here with an interactive map.

Dr. Antone will be serving as the national principal investigator in Romania for FLAMINGO-01. She is Head of Breast Cancer Centre at the Chiricuta Institute of Oncology in Cluj Napoca, Romania. She has been the Chair of the Romania Breast Cancer Group since 2021 and a member of the Women's Empowerment Cancer Advocacy Network since 2015.

CEO Snehal Patel commented, "Romania is the first of several additional countries in Europe that we hope to add to Flamingo-01 as we now focus on mid-sized population countries with large population centers. We have visited the sites in Romania multiple times to assess study feasibility and provide training, and we are impressed with their facilities and commitment to the study. We look forward to working with Dr. Antone and her colleagues and have sufficiently advanced start-up activities this summer to be potentially screening and enrolling our first Romanian patients in the coming months."

About FLAMINGO-01 and GLSI-100

FLAMINGO-01 (NCT05232916) is a Phase III clinical trial designed to evaluate the safety and efficacy of GLSI-100 (GP2 + GM-CSF) in HER2 positive breast cancer patients who had residual disease or high-risk pathologic complete response at surgery and who have

completed both neoadjuvant and postoperative adjuvant trastuzumab based treatment. The trial is led by Baylor College of Medicine and currently includes US and European clinical sites from university-based hospitals and academic and cooperative networks with plans to open up to 150 sites globally. In the double-blinded arms of the Phase III trial, approximately 500 HLA-A*02 patients will be randomized to GLSI-100 or placebo, and up to 250 patients of other HLA types will be treated with GLSI-100 in a third arm. The trial has been designed to detect a hazard ratio of 0.3 in invasive breast cancer-free survival, where 28 events will be required. An interim analysis for superiority and futility will be conducted when at least half of those events, 14, have occurred. This sample size provides 80% power if the annual rate of events in placebo-treated subjects is 2.4% or greater.

For more information on FLAMINGO-01, please visit the Company's websitehere and clinicaltrials.gov here. Contact information and an interactive map of the majority of participating clinical sites can be viewed under the "Contacts and Locations" section. Please note that the interactive map is not viewable on mobile screens. Related questions and participation interest can be emailed to: flamingo-01@greenwichlifesciences.com

About Breast Cancer and HER2/*neu* Positivity

One in eight U.S. women will develop invasive breast cancer over her lifetime, with approximately 300,000 new breast cancer patients and 4 million breast cancer survivors. HER2 (human epidermal growth factor receptor 2) protein is a cell surface receptor protein that is expressed in a variety of common cancers, including in 75% of breast cancers at low (1+), intermediate (2+), and high (3+ or over-expressor) levels.

About Greenwich LifeSciences, Inc.

Greenwich LifeSciences is a clinical-stage biopharmaceutical company focused on the development of GP2, an immunotherapy to prevent breast cancer recurrences in patients who have previously undergone surgery. GP2 is a 9 amino acid transmembrane peptide of the HER2 protein, a cell surface receptor protein that is expressed in a variety of common cancers, including expression in 75% of breast cancers at low (1+), intermediate (2+), and high (3+ or over-expressor) levels. Greenwich LifeSciences has commenced a Phase III clinical trial, FLAMINGO-01.
